UNIT 4

Strong verbs I–III

Strong verbs form their preterite chiefly by changing the stem vowel. This unit gives the complete selected present and preterite indicative of Classes I–III, with the stem changes needed to use them. The noun, pronoun, adjective and weak-verb systems of Units 1–3 remain in use.

In the tables, **1**, **2** and **3** denote first, second and third person; **sg.** and **pl.** denote singular and plural. A column labelled **1–3 pl.** gives the same form for all three plural persons. Dual pronoun subjects also take these plural forms. Use the selected forms when requested; the documented alternatives remain valid Old English. Macrons and the distinction between e and ę are retained.

1. Principal parts and finite stems

The weak verbs already learned add a dental element in the preterite. A strong verb instead has a series of stems: the vowel of its present, singular preterite and plural preterite may differ. The **four principal parts** identify this series. They are conventionally listed as infinitive, singular preterite, plural preterite and past participle.

Position	Function
1. Infinitive	Names the verb and identifies the present stem.
2. Singular preterite	Identifies the ordinary first/third singular preterite stem.
3. Plural preterite	Identifies the stem used in all plural persons and in the second singular.
4. Past participle	Completes the cited stem series; its syntax is not yet required.

Thus drīfan, drāf, drifon, drifen display the Class I sequence ī : ā : i : i. Drāf and drifon are finite indicative forms. The infinitive and participle columns are **supplied citations**: they may be consulted, and their independent recall or use in infinitive, participial, perfect or passive constructions is not required here. A principal-part entry identifies a stem; the complete tables below identify the person and number.

Present indicative forms state present actions or conditions; preterite indicative forms state past actions or conditions. Every finite table in this

unit covers those two tenses and all three persons in singular and plural. The two rare reference verbs in §5 are for recognition only.

2. Endings and stem changes

Person and number	Present	Preterite
1 singular	-e	singular preterite stem; no added ending
2 singular	-st, with the listed stem changes	plural preterite stem + -e
3 singular	-ð, with the listed stem changes	singular preterite stem; no added ending
1, 2, 3 plural	-að	plural preterite stem + -on

Contracted verbs have the special present forms printed in their tables. The strong **second singular preterite** uses the plural stem, not the ordinary first/third singular stem: drife belongs with drifon, while drāf is the first/third singular. Findan has an additional third-singular exception, given in §4. The indicative tables keep every person explicit.

The second and third singular present often lose the vowel of older -est and -eð endings. The resulting consonant groups change. Dental d or t before ð gives tt, sometimes written t; d before st gives tst. Stem-final s combines with either ending as st. A stem-final ð may disappear before st, and doubled ð may be reduced. Doubled consonants may also simplify before a consonantal ending. The selected forms below show the result for each verb.

Some verbs change a consonant between their principal-part stems: snīðan and sēoðan have d in their plural-based preterites, while cēosan has r. Such alternation belongs to the particular verb and stem position. Likewise, g/h alternatives occur in the stated environments after a long vowel or a liquid; they are not interchangeable throughout a paradigm.

Full -est/-eð forms also occur. Their vowels may retain an older change or follow another part of the paradigm by analogy. The notes list documented alternatives; the selected tables do not license automatic manufacture of every possible full-ending spelling.

3. Classes I and II

Class I

The ordinary Class I series is **ī : ā : i : i**. The long ī remains in the selected present stem; the preterite singular has ā, and the plural-based preterite has short i. The fourth vowel belongs to the supplied participle citation.

Infinitive[1]	Meaning	Preterite sg.	Preterite pl.	Participle[1]
drīfan	drive	drāf	drifon	drifen
rīdan	ride	rād	ridon	riden
wrītan	write	wrāt	writon	writen
rīsan	rise	rās	rison	risen
snīðan	cut	snāð	snidon	sniden
wrēon	cover; clothe	wrāh	wrigon	wrigen

[1] The infinitive and participle are supplied citations in every principal-part table. The two middle columns identify finite preterite stems; their person assignments are given below.

Present indicative.

Verb	1 sg.	2 sg.	3 sg.	1–3 pl.
drīfan	drīfe	drīfst	drīfð	drīfað
rīdan	rīde	rītst	rītt	rīdað
wrītan	wrīte	wrītst	wrītt	wrītað
rīsan	rīse	rīst	rīst	rīsað
snīðan	snīðe	snīst	snīð	snīðað
wrēon	wrēo	wrīhst	wrīhð	wrēoð

Preterite indicative.

Verb	1 sg.	2 sg.	3 sg.	1–3 pl.
drīfan	drāf	drife	drāf	drifon
rīdan	rād	ride	rād	ridon
wrītan	wrāt	write	wrāt	writon
rīsan	rās	rise	rās	rison
snīðan	snāð	snide	snāð	snidon
wrēon	wrāh	wrige	wrāh	wrigon

In rīdan and wrītan, the selected present second singular ends in -tst and the third in -tt. Third-singular rīt and wrīt are documented alternatives. Rīsan has rīst in both second and third singular; rīsð is another

third-singular spelling. Snīðan has selected snīst and snīð, with snīðð also valid in the third singular. Its preterite switches to d in snide and snidon, while the first/third singular snāð retains ð.

Wrēon has a contracted present: wrēo, wrīhst, wrīhð, wrēoð. Its preterite uses wrāh beside plural-based wrige and wrigon. The h/g contrast is part of this pattern. The table selects its Class I series; documented analogical Class II forms are not mixed into that selection. See source note 2.

Class II

The ordinary Class II series is **ēo or ū : ēa : u : o**. In the selected second and third singular present, ēo changes to īe and ū to ȳ. The first singular and plural retain the present vowel shown in the infinitive citation. Cook also records ī beside īe; the tables consistently select īe.

Infinitive[1]	**Meaning**	**Preterite sg.**	**Preterite pl.**	**Participle**[1]
bēodan	offer	bēad	budon	boden
būgan	bend	bēag	bugon	bogen
cēosan	choose	cēas	curon	coren
sēoðan	boil	sēað	sudon	soden
drēogan	endure	drēag	drugon	drogen
tēon	draw; pull	tēah	tugon	togen

Present indicative.

Verb	**1 sg.**	**2 sg.**	**3 sg.**	**1–3 pl.**
bēodan	bēode	bīetst	bīett	bēodað
būgan	būge	bȳgst	bȳgð	būgað
cēosan	cēose	cīest	cīest	cēosað
sēoðan	sēoðe	sīest	sīeð	sēoðað
drēogan	drēoge	drīegst	drīegð	drēogað
tēon	tēo	tīehst	tīehð	tēoð

Preterite indicative.

Verb	1 sg.	2 sg.	3 sg.	1–3 pl.
bēodan	bēad	bude	bēad	budon
būgan	bēag	buge	bēag	bugon
cēosan	cēas	cure	cēas	curon
sēoðan	sēað	sude	sēað	sudon
drēogan	drēag	druge	drēag	drugon
tēon	tēah	tuge	tēah	tugon

Bēodan combines the vowel change with dental endings: bīetst and bīett; third-singular bīet is also valid. Būgan has selected bȳgst/bȳgð and the documented alternatives bȳhst/bȳhð. Its singular preterite bēag may also be written bēah.

Cēosan has cīest in both second and third singular present, cēas in the first/third singular preterite, and r in cure and curon. Sēoðan has sīest and sīeð in the present, sēað in the first/third singular preterite, and d in sude and sudon. The fourth principal parts retain the corresponding coren and soden stems.

Drēogan selects drīegst/drīegð in the present; drīehst/drīehð are documented alternatives. Its first/third singular preterite may be drēah beside selected drēag. Keep those g/h choices distinct from the s/r and ð/d alternations of the preceding verbs.

Tēon “draw, pull” is the contracted Class II verb here. Its present is tēo, tīehst, tīehð, tēoð; the preterite has tēah beside tuge and tugon. Its similar infinitive ending does not give it the Class I preterite of wrēon. The meaning identifies the assigned verb; no other homographic verb is included.

4. Class III

Class III contains several related stem patterns. Its vowels in the following series are **short**. The present second/third singular may differ from the infinitive vowel, and the consonant changes described in §2 still apply.

Family	Four-part vowel series	Assigned verbs
Nasal + consonant	i : a : u : u	bindan, winnan, findan, drincan, singan
el	e : ea : u : o	helpan
iel	ie : ea : u : o	gieldan
eor	eo : ea : u : o	weorpan, weorðan, forweorðan
Metathesis	e : æ : u : o	berstan, tōberstan

Metathesis is a change in the order of sounds. In the berstan family, r and the neighbouring vowel have changed order. Its selected series is berstan, bærst, burston, borsten; it is not obtained by substituting the weorpan vowel in every cell.

Infinitive[1]	Meaning	Preterite sg.	Preterite pl.	Participle[1]
bindan	bind; tie	band	bundon	bunden
helpan	help	healp	hulpon	holpen
gieldan	yield	geald	guldon	golden
weorpan	throw	wearp	wurpon	worpen
berstan	burst	bærst	burston	borsten
weorðan	become	wearð	wurdon	worden
winnan	struggle; toil	wann	wunnon	wunnen
findan	find	fand	fundon	funden
drincan	drink	dranc	druncon	druncen
singan	sing	sang	sungon	sungen
tōberstan	break up; go to pieces	tōbærst	tōburston	tōborsten
forweorðan	perish	forwearð	forwurdon	forworden

Present indicative.

Verb	1 sg.	2 sg.	3 sg.	1–3 pl.
bindan	binde	bintst	bint	bindað
helpan	helpe	hilpst	hilpð	helpað
gieldan	gielde	gieltst	gielt	gieldað
weorpan	weorpe	wierpst	wierpð	weorpað
berstan	berste	bierst	bierst	berstað
weorðan	weorðe	wierst	wierð	weorðað
winnan	winne	winst	winð	winnað
findan	finde	fintst	fint	findað
drincan	drince	drincst	drincð	drincað
singan	singe	singst	singð	singað
tōberstan	tōberste	tōbierst	tōbierst	tōberstað
forweorðan	forweorðe	forwierst	forwierð	forweorðað

Preterite indicative.

Verb	1 sg.	2 sg.	3 sg.	1–3 pl.
bindan	band	bunde	band	bundon
helpan	healp	hulpe	healp	hulpon
gieldan	geald	gulde	geald	guldon
weorpan	wearp	wurpe	wearp	wurpon
berstan	bærst	burste	bærst	burston
weorðan	wearð	wurde	wearð	wurdon
winnan	wann	wunne	wann	wunnon
findan	fand	funde	funde	fundon
drincan	dranc	drunce	dranc	druncon
singan	sang	sunge	sang	sungon
tōberstan	tōbærst	tōburste	tōbærst	tōburston
forweorðan	forwearð	forwurde	forwearð	forwurdon

Bindan has bintst/bint in the selected present. Bindest or bindst may occur beside bintst, and bindeð or bindð beside bint. Winnan reduces nn before the singular consonantal endings, giving winst and winð, but retains nn in winne, winnað and the preterite stems. Drincan and singan follow the nasal vowel series without those dental or doubled-n changes.

Helpan has hilpst/hilpð; gieldan has gieltst/gielt; weorpan has wierpst/wierpð. The vowel and the final consonant group both matter. Berstan has bierst in both second and third singular present. Weorðan has selected

wierst, with wierðst also valid, and third-singular wierð. Its first/third singular preterite wearð retains ð, while wurde and wurdon have d.

Findan has selected present fintst/fint. Its first singular preterite is **fand**, its second singular **funde**, and its usual third singular **funde**. Thus the two singular funde forms are distinguished by person or context, not by spelling. Third-singular fand is valid; first-singular funde is also documented. A request for the selected pattern requires the forms in the table, but these alternatives are not grammatical errors.

Tōberstan "break up, go to pieces" follows berstan; forweorðan "perish" follows weorðan. Both are used intransitively in the source reading: the ship breaks up and the companions perish. Their complete forms and whole-word meanings are learned separately. The prefixes do not by themselves supply a general rule for creating other verbs or predicting their meanings. Forwierðst is valid beside selected forwierst.

5. Complete recognition references

The following two exceptional systems are supplied as complete **recognition references**. Consult the tables for the reference exercise; independent production and unintroduced object constructions are not required.

Infinitive[1]	**Meaning**	**Preterite sg.**	**Preterite pl.**	**Participle**[1]
bregdan	brandish; draw	brægd	brugdon	brogden
fēolan	penetrate	fealh	fulgon	folen

Present indicative.

Verb	**1 sg.**	**2 sg.**	**3 sg.**	**1–3 pl.**
bregdan	bregde	brītst	brītt	bregdað
fēolan	fēole	filhst	filhð	fēolað

Preterite indicative.

Verb	**1 sg.**	**2 sg.**	**3 sg.**	**1–3 pl.**
bregdan	brægd	brugde	brægd	brugdon
fēolan	fealh	fulge	fealh	fulgon

Bregdan loses g and lengthens the vowel in selected brītst/brītt; brīt is also valid in the third singular. In its preterite, brǣd may occur beside brægd, and

brūdon beside brugdon. The participle citation brogden also has the variant brōden. These are reference alternatives, not additional recall targets.

Fēolan has the exceptional selected present filhst/filhð beside fēole/fēolað. Its preterite uses fealh, fulge and fulgon; fælon is a documented plural alternative. The participle citation is Cook's folen. Wright records folgen and fōlen separately. Preserve these distinctions rather than adding or removing a length mark. This complete reference combines the sources described in note 3.

6. Four nouns

Noun	Gender	Meaning	Pattern
scip	neuter	ship	short neuter, like hof
wind	masculine	wind	strong masculine
strand	masculine	shore	strong masculine
gefēra	masculine	companion	weak masculine

Case	scip sg.	scip pl.	wind sg.	wind pl.
Nom.	scip	scipu	wind	windas
Gen.	scipes	scipa	windes	winda
Dat.	scipe	scipum	winde	windum
Acc.	scip	scipu	wind	windas

Case	strand sg.	strand pl.	gefēra sg.	gefēra pl.
Nom.	strand	strandas	gefēra	gefēran
Gen.	strandes	stranda	gefēran	gefērena
Dat.	strande	strandum	gefēran	gefērum
Acc.	strand	strandas	gefēran	gefēran

Scip has a short stem syllable and therefore nominative/accusative plural scipu. The initial sc does not make the vowel syllable heavy: both consonants precede the vowel. Wind and strand retain their ordinary strong masculine stems. Gefēra has the weak oblique singular and nominative/accusative plural gefēran, but genitive plural gefērena and dative plural gefērum. The same written form gefēran can have several analyses; its clause supplies the choice.

7. Ordinary clauses

The following selected uses take an **accusative object**: drīfan with the being driven, bindan with the being bound, cēosan with the person or thing chosen, findan with the person or thing found, and drincan with the liquid drunk. The verb's particular use determines its construction. These object patterns do not follow merely from membership in a strong class.

The eight examples in this section are newly composed teaching material. The other verbs in the tables may be practised as labelled finite forms without assuming additional object or complement constructions.

Ic drīfe ðā nīetenu.

I drive the cattle.

Nīetenu is the accusative plural object. The singular first-person subject takes drīfe.

Ðū cīest ðæt scip.

You choose the ship.

Scip is the neuter accusative singular object. Cīest is the selected second singular present of cēosan.

Se gefēra dranc wæter.

The companion drank water.

The companion is the subject; wæter is the accusative object. Dranc is the third singular preterite.

Rīdan "ride" and singan "sing" may stand without a nominal object. A familiar adverb may qualify the action. Riding here has its ordinary horseback sense; these clauses introduce no direction or means phrase.

Ðū rītst and hē rītt.

You ride, and he rides.

Each singular subject has its own finite verb. Both forms preserve the dental changes of rīdan.

Wit sungon wel.

We two sang well.

The dual subject takes the plural preterite sungon. Wel qualifies the singing.

The selected construction of **helpan** puts the recipient of help in the **dative**. A person or another being helped can occupy this position. The genitive also occurs with this verb; it is valid Old English but differs from the dative

construction requested here. The use with birds in the cumulative practice is an ordinary application of the same helping sense.

Hē hilpð ðǣm męnn.

He helps the man.

Męnn is dative singular, marked also by ðǣm. It is the recipient of help, not an accusative object.

Ordinary **weorðan** means “become”. Its predicate adjective is nominative and agrees with the subject in gender and number, as a predicate with the copula does. This ordinary use is distinct from the passive expressions previously supplied in readings.

Se gefēra wearð glæd.

The companion became glad.

Glæd is strong masculine nominative singular, agreeing with gefēra. Wearð is the third singular preterite of weorðan.

Place **ne** before the noncontracting strong finite forms used here, just as before the ordinary weak forms already learned. The form of the verb otherwise keeps its person, number and tense. Contracted negative copulas and other negative systems are not part of this rule.

Ic ne finde ðæt scip.

I do not find the ship.

Ne negates the first singular present finde. The object remains accusative.

8. Practice

All exercises in this unit are new teaching material. Principal-part citations and the two reference paradigms remain available where the prompt calls for them. Other production tasks use the selected forms and the ordinary constructions taught above.

Principal parts — P1–P4

P1.
The printed entry gives drīfan, drāf, drifon, drifen. Label the four principal-part positions. Which two entries are finite indicative forms, and which two are nonfinite citations?

P2.
Using the printed principal-part table, identify the strong class of rīdan, bēodan and bindan. For each verb give the second-person singular preterite and state which principal-part stem it uses.

P3.
Give every person and number represented by the finite forms drāf and drifon in the selected indicative paradigm. Explain why the supplied citation drifen is not another person of that paradigm.

P4.
Compare ðū ride and ðū hīerdest. Give the person, number and tense of each verb, and explain the different formation of their preterites.

Class I — A1–A6

A1.
Give the complete selected present and preterite indicative of drīfan. Label all three persons in the singular and plural even where forms coincide.

A2.
For rīdan and wrītan, give the first-, second- and third-person singular present, then the first- and second-person singular preterite and the plural preterite. Explain the selected present dental forms.

A3.
For rīsan and snīðan, give the second- and third-person singular present and the second-person singular and plural preterite. Identify the consonant change in snīðan.

A4.
Give the complete selected present and preterite indicative of wrēon. Keep its contracted present forms distinct from its preterite stems.

A5.
Translate “I rode. You rode. He rode. We rode.” Address one person in the second sentence. Then give the four corresponding present-tense sentences.

A6.
With drīfan, give the present forms agreeing with ic, wē, ðū and hē. Then give the corresponding preterite forms. Keep the person and number of each subject unchanged.

Class II — B1–B6

B1.

Give the complete selected present and preterite indicative of bēodan. Identify the present forms whose vowel differs from that of the infinitive citation.

B2.

For būgan, give the first-, second- and third-person singular present and the second-person singular and plural preterite. Contrast its present vowel change with bēodan.

B3.

For cēosan, give the second- and third-person singular present, the first- and second-person singular preterite and the plural preterite. Explain where the selected s and r occur.

B4.

For sēoðan and drēogan, give the second- and third-person singular present, the first- and second-person singular preterite and the plural preterite. Keep the two verbs' consonant patterns distinct.

B5.

Give the complete selected present and preterite indicative of tēon, "draw". Use the Class II verb assigned in this unit.

B6.

Compare the assigned wrēon and tēon tables. Give each verb's first-person singular present, first-person singular preterite, second-person singular preterite and plural preterite. Explain why the similar infinitive endings do not make them members of the same strong class.

Class III — C1–C8

C1.

Give the complete selected present and preterite indicative of bindan. Explain the selected second- and third-person singular present forms.

C2.

For helpan and gieldan, give the second- and third-person singular present, the first- and second-person singular preterite and the plural preterite. Preserve each verb's selected stem vowels.

C3.

For weorpan and berstan, give the second- and third-person singular present, the first- and second-person singular preterite and the plural preterite. Explain the difference between their first preterite stems.

C4.
Give the complete selected present and preterite indicative of weorðan. Identify the cells with ð and those with d.

C5.
Give the complete selected present and preterite indicative of findan. State the ordinary third-person singular preterite selected here and its documented alternative. Then give the second- and third-person singular present and plural preterite of winnan.

C6.
For drincan and singan, give the second- and third-person singular present, the first- and second-person singular preterite and the plural preterite. State which Class III pattern they follow.

C7.
Give the complete selected present and preterite indicative of tōberstan and forweorðan. Identify the base pattern used by each, and give the separately learned meaning of each whole verb.

C8.
Consult the complete reference tables of bregdan and fēolan. Identify their third-person singular present and plural preterite entries and the special changes noted with them. These are recognition reference forms.

Nouns — N1–N3

N1.
Give the nominative, genitive, dative and accusative singular and plural of scip and wind. Explain their different nominative and accusative plural endings.

N2.
Give the nominative, genitive, dative and accusative singular and plural of strand and gefēra. Explain why gefēran alone does not identify a unique case and number.

N3.
Translate “The companions found two ships on the shore. The good man’s ship was small.” In the second sentence put the limiting genitive before the head noun.

Clauses — D1–D10

D1.
Translate “The companions choose the small dwelling. We choose the great ship.”

D2.
Translate “The man found the good man’s ship. He bound the animal.” Put the limiting genitive before its head noun.

D3.
Translate “We two drank the water, and you two sang well.” Retain both dual subjects.

D4.
Change the subjects to the corresponding plurals and make the verbs agree: Se mann bint ðæt dēor. Se fugol singð wel. Keep the object of the first sentence singular.

D5.
Change Ic rīde wīde and finde ān hof to the preterite. Preserve the first-person subject, the object and the coordination.

D6.
Here hē and the companion are different people. Change Hē sang wel, and se gefēra hīerde hine to the present. Identify the subject of each verb and the referent of hine.

D7.
Translate “The companion became glad. The companions become glad.” Explain the case and number of the predicate adjectives.

D8.
Translate “I helped the old man. The old man helped me.” Use the case required by the taught helpan construction.

D9.
Translate “The companions did not find the ship. I do not choose the great dwelling.”

D10.
Translate “You did not drink the water. You drink water.” Address one person in the first sentence and several people in the second.

9. Controlled reading: Two companions choose a dwelling

This account is newly composed. The two companions are the two men of the account; one speaks to the other at the end. Its preterites narrate the successive actions. The quotation shifts to present statements and to the speaker's first person and addressee's second person.

> Twēgen gefēran ridon wīde. Hīe fundon twā hofu. Ān hof wæs micel, and ān hof wæs lȳtel. Hīe curon ðæt lȳtle hof. Hīe hæfdon męte and wæter. Hīe druncon ðæt wæter and geręston hīe on ðǣm lȳtlan hofe. Ān mann sægde: "Wit habbað gōd hof. Ic singe, and ðū hīerst mē."

Controlled reading — L1–L6

L1.
Translate the complete new account "Two companions choose a dwelling". Preserve the sequence of actions and the speakers in the closing quotation.

L2.
List the strong finite verbs in the account. Give each verb's headword, class, person, number and tense.

L3.
For ridon, fundon, curon and druncon in the account, give the corresponding third-person singular preterite and the second-person singular preterite. Preserve the selected lexical exceptions.

L4.
Which dwelling do the companions choose? Who sings in the quotation, and whom does the addressee hear? Explain the reference of wit, ic, ðū and mē.

L5.
Retell the first four sentences of the account in the present. Preserve the people, things, case relations and adjective endings.

L6.
Replace the closing quotation with "We have a good dwelling. We sing, and you hear us." Let a group of speakers address another group; use plural personal pronouns.

10. Source reading: The shipwreck and the survivor

This original extract from **Apollonius of Tyre** gives a complete storm-to-shore episode. The two Class III forms tōbærst and forwurdon use the systems learned here. The additional words and constructions are supplied in the local help and may be consulted throughout these tasks.

Setting. Apollonius has embarked for Cyrene. A sudden storm has already disturbed the sea.

> Ðǣr-tō-ēacan cōmon ēastnorðerne windas, and se angrīslica sūðwesterna wind him ongēan stōd, and ðæt scip eall tōbærst on ðisse ęgeslican hrēohnesse. Apollonius gefēran ealle forwurdon tō dēaðe, and Apollonius āna becōm mid sunde tō Pentapolim ðǣm Cyreniscan lande, and ðǣr ūpēode on ðǣm strande.

Local help

The case analyses below apply to the actual phrases. The four supplied preterites cōmon, stōd, becōm and ūpēode do not yet require complete paradigms or independent recall.

Ðǣr-tō-ēacan

"In addition to that; besides." Further winds join the storm already described in the setting.

cōmon ēastnorðerne windas

Cōmon is third-person plural preterite, "came". Ēastnorðerne means "northeasterly" and is masculine nominative plural, agreeing with windas. The winds are the subject.

se angrīslica sūðwesterna wind him ongēan stōd

"The fierce southwest wind stood against them." Angrīslica "fierce" and sūðwesterna "southwestern" are weak masculine nominative singular after se. Stōd is third-person singular preterite, "stood". Ongēan follows its dative pronoun him. The guiding interpretation takes him as the preceding northeast winds; its spelling can also be masculine or neuter singular, so the form alone does not settle its reference.

ðæt scip eall

"The whole ship; all the ship." Eall is strong neuter nominative singular and follows the noun phrase. Its morphology remains the recognition material of Unit 3; this whole-ship expression is supplied here.

on ðisse ęgeslican hrēohnesse

“In this terrible tempest.” Hrēohnesse is feminine dative singular; ęgeslican “terrible” is weak after the demonstrative. Here on describes the surrounding circumstance in which the ship breaks up.

Apollonius gefēran ealle

“All Apollonius’s companions.” The first Apollonius is genitive, despite its ending; Cook explicitly identifies its case. Gefēran is nominative plural. Ealle “all” is strong masculine nominative plural and follows the noun. The all-quantifier phrase is supplied, while the noun and its plural agreement use the paradigms already available.

forwurdon tō dēaðe

“Perished to death”; naturally, “died” or “perished”. Forwurdon is the taught third-person plural preterite. Dēaðe “death” is masculine dative singular. The whole tō phrase gives the endpoint or result and is supplied here.

Apollonius āna becōm mid sunde

“Apollonius alone arrived by swimming.” This Apollonius is nominative. Āna is weak masculine nominative singular in the sense “alone”, distinct from the ordinary cardinal “one”. Becōm is third-person singular preterite, “came, arrived”. Sunde is the dative singular of a neuter noun meaning “swimming”; mid sunde gives the means. It is not an infinitive or an instrumental case form.

tō Pentapolim ðǣm Cyreniscan lande

“To Pentapolis, the Cyrenian land.” The foreign place-name spelling Pentapolim is preserved. The native phrase that explains the destination is neuter dative singular; Cyreniscan is weak and means “Cyrenian, of Cyrene”; lande means “land, country”. This exact destination and apposition are supplied without a new general rule for foreign-name endings.

ðǣr ūpēode on ðǣm strande

“There he came up onto the shore.” Ðǣr means “there”; ūpēode is the actual third-person singular preterite, “went/came up”. Apollonius remains the understood subject. Strande is dative singular in the printed expression, even though a natural English translation describes movement.

Source reading — R1–R5

R1.
Translate the complete source passage “The shipwreck and the survivor”, using the local support. Preserve the contrasting fates of the ship, the companions and Apollonius.

R2.
Analyse tōbærst and forwurdon: give each whole verb’s headword, class, person, number and tense, and identify its subject in the passage.

R3.
Using the proper-name note, distinguish the first Apollonius from the second. Explain why gefēran takes plural forwurdon rather than a singular verb.

R4.
Identify windas, wind, scip, gefēran and strande in their clauses. Give each noun’s case and number; use the supplied phrase notes wherever the construction is new.

R5.
How does Apollonius reach land, and where does the passage leave him? Explain the contribution of the supplied āna without treating it as an ordinary cardinal “one”.

11. Cumulative review

Review — X1–X4

X1.
Correct the three marked finite forms: Đū *drāf. Hīe *cēas ðæt scip. Se mann *bindað ðæt dēor. Preserve the given subjects and tenses.

X2.
Write four connected Old English sentences about two companions: they ride, find two ships, choose the small ship, and drink water. Narrate all four actions in the preterite and retain the same two people as subjects.

X3.
Translate “The old companion helps my birds. My birds sing well. We found his small ship on the shore.” Distinguish the helper, the birds, the finders and the owner.

X4.
Analyse Hē funde, Đū funde and Hīe fundon. Which finite forms distinguish number? What identifies the different persons in the two singular clauses?

12. Source and variant notes

1. The principal-part, indicative and stem rules follow Cook, **A First Book in Old English**, §§92–95 and 101–104, printed pp.54–55 and 58–63. The selected tables preserve the edition's quantities. Full finite cells formed from a checked stem and the ordinary endings are transparent applications of the pattern; the tables do not claim a separate surviving quotation for every person.
2. Wright's **Old English Grammar** corroborates the selected stem series and recorded alternatives. In particular, its Class III discussion permits first- as well as third-person funde. Its discussion of contracted Class I verbs records analogical movement into Class II; the wrēon table here consistently selects Cook's Class I pattern. Alternatives in the notes are available for recognition and comparison, not additional independent-recall requirements.
3. The rare fēolan reference combines Cook's principal parts and ordinary endings with Bosworth–Toller's filhst/filhþ entries. The displayed filhð changes þ to the course's ð spelling only. The supplement transfers the earlier entry's passages to fēolan. This is a complete synthesized reference, not a claim that each printed cell is individually attested. Cook's folen and Wright's folgen/fōlen remain distinct citations.
4. The ordinary case frames are independently documented: Cook's direct-object and predicate rules (§§168 and 150), his occurrences of findan, cēosan and singan, and the Bosworth–Toller entries for drīfan, bindan, rīdan, drincan and helpan. The animal and ship/dwelling objects in the new examples are ordinary applications of these senses. Attested human dative recipients of help support its ordinary application to birds; the dictionary also records a genitive construction.
5. The original extract is Cook, **A First Book in Old English**, Reader XII, **Apollonius of Tyre**, printed pp.165–166, one-based PDF181–182. It begins within p.165 line 6 and ends at the first period in p.166 line 4. These line counts expand the edition's printed five-line intervals. The line-crossing compound Ðǽr-tō-ēacan is joined, and note cues are moved below; the Old English spelling and punctuation are preserved. The English setting is editorial context.

Cook's notes to the extract

P.165, note 7. Lat. (verse): Hinc Notus,hinc Boreas,hinc horridus Africus instat.

The Latin verse evokes winds from different quarters; it does not explicitly settle the antecedent of him.

P.166, note 1. The Latin endings of proper nouns are not always a guide to the case (54). Here we have the genitive.

P.166, note 2. See forweorðan.

P.166, note 3. See 79.

Section 79 explains the special "alone" use supplied with āna above.
