UNIT 8

Questions and relative clauses

This unit gives direct questions, the remaining selected pronoun and pronominal-adjective paradigms, and ordinary relative clauses. The additional verb systems and lexical constructions prepare the complete Cook I.8 exercise and two connected readings.

Tables distinguish singular and plural, masculine, neuter and feminine, and nominative, genitive, dative and accusative. In verb tables, **1**, **2** and **3** mean first, second and third person. A row labelled **1–3 sg.** or **1–3 pl.** includes every person in that number. Dual subjects take plural finite forms. Forms labelled **reference** are for recognition; their display does not require independent use of a new construction. Preserve vowel length and the distinction between e and ę.

The examples and “The ship and the fish” are new teaching material. The merchant dialogue is an exact source excerpt with separate local help and original notes.

1. Direct questions

A direct **yes/no question** commonly begins with its finite verb, followed by the subject. The verb retains the person, number and tense required by that subject. Old English does not need an added verb corresponding to the English question auxiliary “do”.

Hæfð se mann scip?

Does the man have a ship?

A question word or phrase commonly stands early, often before the finite verb. A question word that is itself the subject needs no second subject. These are common orders, not an exceptionless rule requiring one fixed arrangement. A phrase such as “whose ship” is one constituent, even though it contains two words.

More generally, the finite verb commonly stands early in an independent clause and later, often finally, in a dependent clause. The relative clauses below illustrate that tendency. The case endings and the meaning of the clause remain essential when the order varies. This unit uses direct questions; indirect questions and general content complements come later.

Who? What?

Hwā asks about a person; **hwæt** asks about a thing. Their paradigm is singular only. Masculine and feminine share one personal series; there is no separate feminine or plural paradigm. Choose the case from the interrogative's own function: nominative subject, genitive possessor, accusative direct object, or dative recipient or other governed complement.

hwā / hwæt

Case	Common masculine/feminine singular	Neuter singular
Nominative	hwā	hwæt
Genitive	hwæs	hwæs
Dative	hwǣm	hwǣm
Accusative	hwone	hwæt

Hwā hæfð ðæt scip? Hwone siehð se mann?

Who has that ship? Whom does the man see?

Hwā is the subject of hæfð. Hwone is the object of siehð; se mann remains the nominative subject. English "whom" corresponds here to an accusative because "see" has an accusative object.

Hwǣm sęlst ðū ðone fisc? Hwæs scip siehst ðū?

To whom do you give that fish? Whose ship do you see?

Hwǣm is the dative recipient of the fish. Hwæs is genitive because it asks whose ship is seen; scip itself is the accusative object of siehst. The possessor and the possessed noun have different functions within that phrase.

Hwǣm is the selected dative in this unit. Cook also gives **hwām** as a valid alternative. The distinct instrumental forms below are reference forms; learning them does not introduce general instrumental syntax.

hwā reference variants and instrumentals

Function	Form
Dative common personal: printed alternative	hwām
Dative neuter: printed alternative	hwām
Neuter instrumental	hwȳ
Neuter instrumental alternative	hwon

How? Why?

Hū asks about manner; **hwȳ** asks for a reason. Both are invariant question words in the following use. Lexical hwȳ "why?" can be used without constructing a general instrumental phrase.

Question adverbs

Function	Form
How	hū
Why	hwȳ

Hwæt hæfð se mann? Hū swimð hē? Hwȳ swimð hē?

What does the man have? How does he swim? Why does he swim?

Hwæt is the accusative thing possessed. Hū and hwȳ ask different questions about the same swimming: how it is done, and why it is done.

2. Interrogative adjectives

Hwilc means "which?" or "of what kind?"; **hwæðer**, "which of two?"; **hūlic**, "of what sort?". They have strong adjective inflection and agree with their noun or referent in gender, number and case. No weak interrogative-adjective paradigm is needed here.

The strong endings are the familiar adjective endings: masculine and neuter singular genitive -es and dative -um, masculine accusative -ne, feminine genitive and dative -re; plural genitive -ra and dative -um. The tables give the complete forms, including the nominative and accusative distinctions. Feminine plural -a is selected consistently; the previously noted feminine plural alternative -e remains valid.

hwilc: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	hwilc	hwilc	hwilc
Genitive	hwilces	hwilces	hwilcre
Dative	hwilcum	hwilcum	hwilcre
Accusative	hwilcne	hwilc	hwilce

hwilc: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	hwilce	hwilc	hwilca
Genitive	hwilcra	hwilcra	hwilcra
Dative	hwilcum	hwilcum	hwilcum
Accusative	hwilce	hwilc	hwilca

Keep the stem hwilc- before these endings. Hwelc and hwylc are documented spellings; expanded forms such as hwilcere and hwilcera also occur. The tables give the selected forms for recall.

hūlic: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	hūlic	hūlic	hūlic
Genitive	hūlices	hūlices	hūlicre
Dative	hūlicum	hūlicum	hūlicre
Accusative	hūlicne	hūlic	hūlice

hūlic: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	hūlice	hūlic	hūlica
Genitive	hūlicra	hūlicra	hūlicra
Dative	hūlicum	hūlicum	hūlicum
Accusative	hūlice	hūlic	hūlica

Hūlic keeps hūlic- throughout. Cook marks the first vowel long; this chapter retains that notation. The separately documented spelling hūlīc does not change the selected table.

hwæðer: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	hwæðer	hwæðer	hwæðer
Genitive	hwæðres	hwæðres	hwæðerre
Dative	hwæðrum	hwæðrum	hwæðerre
Accusative	hwæðerne	hwæðer	hwæðre

hwæðer: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	hwæðre	hwæðer	hwæðra
Genitive	hwæðerra	hwæðerra	hwæðerra
Dative	hwæðrum	hwæðrum	hwæðrum
Accusative	hwæðre	hwæðer	hwæðra

Hwæðer loses its unstressed e before the ordinary vowel endings: hwæðres, hwæðrum, hwæðre, hwæðra. It retains e before the consonantal endings in hwæðerne, hwæðerre and hwæðerra. Its feminine nominative singular and neuter nominative/accusative plural are hwæðer. Do not copy the ōðru cells of ōðer into this paradigm. Attested alternatives include hwæðeres and feminine hwæðere.

Hwæðer always distinguishes **two alternatives** in the use taught here. A singular noun can name one of two people or objects; plural morphology can distinguish two explicitly plural groups. It does not turn the choice into one among an unlimited number. The conjunction “whether” is a separate later use.

In the second question below, two men are being compared.

Hwilc mann hæfð ðæt scip? Hwæðer mann hæfð ðæt scip? Hūlic is ðæt scip?

Which man has that ship? Which of the two men has that ship? What sort of ship is that?

Hwilc and hwæðer modify nominative masculine singular mann. Hūlic is the strong neuter singular predicate referring to scip. The question word’s English meaning does not remove ordinary adjective agreement.

3. Some, any, each, and such

The following words also take complete strong adjective inflection. **Sum** means “a certain” in the singular and “some” in the plural. ***Æ*nig** means “any” in the ordinary direct questions used here. **Gehwilc** means “each, every”; its ordinary use in this unit is with a singular noun. **Swilc** means “such”, referring to a kind already understood from the context.

sum: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	sum	sum	sumu
Genitive	sumes	sumes	sumre
Dative	sumum	sumum	sumre
Accusative	sumne	sum	sume

sum: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	sume	sumu	suma
Genitive	sumra	sumra	sumra
Dative	sumum	sumum	sumum
Accusative	sume	sumu	suma

Short-stem sum has -u in feminine nominative singular and neuter nominative/accusative plural: sumu. The genitive and dative endings still mark their ordinary functions.

Sum mann hæfð scip. Sume męnn habbað scipu.

A certain man has a ship. Some men have ships.

Sum mann is singular, with hæfð; sume męnn is plural, with habbað. The object likewise distinguishes scip from plural scipu. Sum supplies “a certain”; the earlier cardinal ān still means “one”.

ænig: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	ænig	ænig	ænigu
Genitive	æniges	æniges	ænigre
Dative	ænigum	ænigum	ænigre
Accusative	ænigne	ænig	ænige

ǣnig: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	ǣnige	ǣnigu	ǣniga
Genitive	ǣnigra	ǣnigra	ǣnigra
Dative	ǣnigum	ǣnigum	ǣnigum
Accusative	ǣnige	ǣnigu	ǣniga

The selected ǣnig forms retain i: ǣniges, ǣnigum, ǣnigre, ǣnigra. The listed -u cells are ǣnigu; analogical ǣnig without -u is a documented alternative. Syncope in disyllabic adjectives varies, so do not mechanically contract every -ig adjective by analogy with another word. These questions teach a bounded use of “any”; they do not establish its distribution in every negative or conditional construction.

gehwilc: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	gehwilc	gehwilc	gehwilc
Genitive	gehwilces	gehwilces	gehwilcre
Dative	gehwilcum	gehwilcum	gehwilcre
Accusative	gehwilcne	gehwilc	gehwilce

gehwilc: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	gehwilce	gehwilc	gehwilca
Genitive	gehwilcra	gehwilcra	gehwilcra
Dative	gehwilcum	gehwilcum	gehwilcum
Accusative	gehwilce	gehwilc	gehwilca

Gehwilc follows the same strong pattern as hwilc. A singular noun meaning “each man” or “each companion” takes a singular verb. Its complete plural morphology is given for form analysis, but the plural table does not make gehwilc a general substitute for eall “all” in every context. Partitive expressions such as “each of” come later.

Hæfst ðū ǣnigne fisc? Gehwilc mann hæfð scip.

Do you have any fish? Each man has a ship.

*Ǣ*nigne agrees with singular masculine accusative fisc; the English “any fish” here asks about a fish, not an Old English plural. Gehwilc mann is nominative singular.

swilc: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	swilc	swilc	swilc
Genitive	swilces	swilces	swilcre
Dative	swilcum	swilcum	swilcre
Accusative	swilcne	swilc	swilce

swilc: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	swilce	swilc	swilca
Genitive	swilcra	swilcra	swilcra
Dative	swilcum	swilcum	swilcum
Accusative	swilce	swilc	swilca

Swilc keeps zero ending in feminine nominative singular and neuter nominative/accusative plural, as do hwilc, hūlic and gehwilc. In the selected indefinite use, a following ordinary descriptive adjective is strong. Its case, gender and number still agree with the same noun.

Swilc mann is gōd. Swilce męnn sindon gōde.

Such a man is good. Such men are good.

Here swilce is an inflected masculine plural adjective modifying męnn. The earlier **swilce “likewise”** is an invariant adverb. Identical spelling does not make the two uses grammatically identical.

4. Other, same, and self

The earlier **ōðer “second”** also means **“other, another”**. Context determines the sense. Its strong forms are retained even after an article; this lexical pattern does not acquire a new weak declension.

ōðer: other / another, singular

Case	Masculine	Neuter	Feminine
Nominative	ōðer	ōðer	ōðru
Genitive	ōðres	ōðres	ōðerre
Dative	ōðrum	ōðrum	ōðerre
Accusative	ōðerne	ōðer	ōðre

ōðer: other / another, plural

Case	Masculine	Neuter	Feminine
Nominative	ōðre	ōðru	ōðra
Genitive	ōðerra	ōðerra	ōðerra
Dative	ōðrum	ōðrum	ōðrum
Accusative	ōðre	ōðru	ōðra

Retain ōðr- before the ordinary vowel endings, but ōðer- in ōðerne, ōðerre and ōðerra. In particular, feminine nominative singular and neuter nominative/accusative plural are ōðru. The complete earlier morphology is reused with the new sense.

Ilca "same" is weak only. It ordinarily follows the article. Any following ordinary descriptive adjective is also weak in that definite phrase. Ilca has no strong declension.

ilca: weak declension, singular

Case	Masculine	Neuter	Feminine
Nominative	ilca	ilce	ilce
Genitive	ilcan	ilcan	ilcan
Dative	ilcan	ilcan	ilcan
Accusative	ilcan	ilce	ilcan

ilca: weak declension, plural

Case	Masculine	Neuter	Feminine
Nominative	ilcan	ilcan	ilcan
Genitive	ilcra	ilcra	ilcra
Dative	ilcum	ilcum	ilcum
Accusative	ilcan	ilcan	ilcan

The stem ilc- takes masculine nominative singular -a; feminine/neuter nominative singular and neuter accusative singular -e; the remaining singular endings are -an. Plural nominative and accusative have -an, genitive -ra and dative -um.

Se ōðer mann hæfð ōðer scip. Se ilca mann hæfð ðæt scip.

The other man has another ship. The same man has that ship.

The first sentence distinguishes another man and another ship; it need not place them second in a numbered series. The second identifies the same man again. Both ōðer and ilca agree with the masculine nominative singular mann, but each follows its own declensional pattern.

Self emphasizes or reinforces the person or thing referred to. It agrees with that referent in case, number and gender; it is not an invariant ending mechanically attached to an English-style pronoun compound. Both strong and weak forms occur. Strong self is used in the ordinary personal emphasis illustrated below; the weak system is retained separately, with the familiar weak endings.

self: strong declension, singular

Case	Masculine	Neuter	Feminine
Nominative	self	self	self
Genitive	selfes	selfes	selfre
Dative	selfum	selfum	selfre
Accusative	selfne	self	selfe

self: strong declension, plural

Case	Masculine	Neuter	Feminine
Nominative	selfe	self	selfa
Genitive	selfra	selfra	selfra
Dative	selfum	selfum	selfum
Accusative	selfe	self	selfa

self: weak declension, singular

Case	Masculine	Neuter	Feminine
Nominative	selfa	selfe	selfe
Genitive	selfan	selfan	selfan
Dative	selfan	selfan	selfan
Accusative	selfan	selfe	selfan

self: weak declension, plural

Case	Masculine	Neuter	Feminine
Nominative	selfan	selfan	selfan
Genitive	selfra	selfra	selfra
Dative	selfum	selfum	selfum
Accusative	selfan	selfan	selfan

Hē self geseah ðæt scip.

He himself saw that ship.

Self is strong nominative masculine singular, emphasizing the subject hē. A personal pronoun can already have reflexive reference without self. Adding self reinforces it: an accusative reflexive takes accusative agreement, and a dative reflexive takes dative agreement. For a male accusative referent the strong form is selfne; the first-person form mē can therefore be reinforced by selfne when the speaker is male. Do not choose self's case from the English translation "myself" alone.

Reference forms and limits

Gehwā / gehwæt is an indefinite ge-compound of the interrogative pattern: "each one, everyone / everything". Recognize the following complete singular paradigm. Its independent indefinite, partitive and distributive uses are reserved for later work; no plural is supplied.

gehwā / gehwæt: reference forms

Case	Common masculine/feminine singular	Neuter singular
Nominative	gehwā	gehwæt
Genitive	gehwæs	gehwæs
Dative	gehwǣm	gehwǣm
Accusative	gehwone	gehwæt

The distinct strong instrumental forms below are also for recognition. Weak instrumental forms coincide with dative forms. These reference tables do not introduce productive instrumental constructions.

Instrumental reference forms

Word	Masculine singular	Neuter singular
hwilc	hwilce	hwilce
hūlic	hūlice	hūlice
hwæðer	hwæðre	hwæðre
sum	sume	sume
ǣnig	ǣnige	ǣnige
gehwilc	gehwilce	gehwilce
swilc	swilce	swilce
self	selfe	selfe
ōðer	ōðre	ōðre

The ordinary uses above leave several related systems for Unit 15: indefinite ān “a certain”, negative pronouns such as nān and nǣnig, either/neither families, indeclinable “anything/nothing” words, -hwega compounds, indefinite hwā “anyone”, and swā-hwā/swā-hwilc free-choice clauses. The impersonal use of man “one” is also separate from the count noun mann already learned. The earlier meanings and limits of eall, ǣlc and the possessives remain in force; sīn is not added here.

5. Relative clauses

A **relative clause** identifies or describes an antecedent in another clause. Old English can introduce it with invariant **ðe**, with an inflected member of **se/sēo/ðæt** alone, or with that inflected member followed by **ðe**. English often uses “who”, “which” or “that”; an English personal relative does not require the Old English interrogative hwā.

Invariant relative particle

Function	Form
Who / which / that, with role determined inside the clause	ðe

Ðe does not change its spelling for gender, number or case. Determine its role from the relative clause itself.

Se mann, ðe ðæt scip hæfð, is mīn gefēra.

The man who has that ship is my companion.

Ðe is the subject of hæfð; the ship is its accusative object. The antecedent se mann is the subject of the main clause is mīn gefēra.

Ic geseah ðæt scip, ðe se mann hæfð.

I saw the ship that the man has.

Here ðe is the object of hæfð, while se mann is the relative clause's own nominative subject. The antecedent ðæt scip is the object of the main verb geseah. Invariant spelling does not erase these different functions.

The inflected relative reuses the complete demonstrative forms. Its **gender and number** normally follow the antecedent. In the ordinary pattern used for composition here, its **case** follows its function inside the relative clause. The antecedent has the case required by its separate function in the main clause.

se / sēo / ðæt: relative forms, singular

Case	Masculine	Neuter	Feminine
Nominative	se	ðæt	sēo
Genitive	ðæs	ðæs	ðǣre
Dative	ðǣm	ðǣm	ðǣre
Accusative	ðone	ðæt	ðā

se / sēo / ðæt: relative forms, plural

Case	Masculine	Neuter	Feminine
Nominative	ðā	ðā	ðā
Genitive	ðāra	ðāra	ðāra
Dative	ðǣm	ðǣm	ðǣm
Accusative	ðā	ðā	ðā

Ic sęlle ðone fisc ðǣm męnn, se ðe mē healp.

I give the fish to the man who helped me.

Ðǣm męnn is dative, the recipient of sęlle. The relative se is nominative, the subject of healp. The person helped is dative mē. The antecedent's dative does not make the relative subject dative.

Ic geseah ðone mann, ðǣm ðe ic healp.

I saw the man whom I helped.

Ðone mann is accusative after geseah. Within the relative, ic is subject and helpan governs dative ðǣm. The relative's gender and number still refer to the masculine singular man.

Se mann, ðæs scip ic geseah, is gōd.

The man whose ship I saw is good.

Ðæs is genitive, expressing possession inside the relative: **whose ship**. Its antecedent mann is masculine singular and nominative in the main clause. Scip is neuter singular but accusative, the object of geseah; ic is the subject. The possessor's antecedent determines the relative's gender and number, not the possessed ship. A possessive relative therefore does not force its possessed noun into the genitive.

When a relative subject refers to a personal-pronoun antecedent, its verb can retain that antecedent's person. In the selected second-person clauses, use the second-person verb form; the English word "who" does not automatically make the Old English verb third person.

Ðū, ðe mē hulpe, sęle mē ðone fisc.

You, who helped me, give me that fish.

Hulpe is second-person singular preterite, agreeing with the antecedent ðū. Sęle is the singular command addressed to that person. With a plural antecedent the relative verb and the command must both change where their forms require it.

Recognition notes. An inflected relative sometimes takes its antecedent's case instead of the case expected from its own role. This is **case attraction**, an attested exception; it does not replace the ordinary internal-case pattern required in this unit's compositions. A less common strategy uses ðe together with a personal pronoun whose inflection marks the internal function. Recognize that strategy when explained in a text; independent composition with it comes later. Neither note changes the earlier limits on personal genitives or instrumental syntax.

6. Additional verb systems and lexical constructions

Ætēowian: appear

Ætēowian is weak class II and **intransitive**: the thing appearing is the nominative subject. It is distinct from transitive ætīewan "reveal, display". The complete present and preterite indicative and subjunctive are given below.

Keep the lexical stem ætēow-. The present indicative has first-singular -ie, second-singular -ast, third-singular -að and plural -iað. The weak preterite has -ode, -odest, -ode and plural -odon. For the subjunctive, add singular -e or plural -en to the present stem ætēowi- or the preterite stem ætēowod-, giving the exact spellings shown.

ætēowian: complete indicative

Person and number	Present indicative	Preterite indicative
1 sg.	ætēowie	ætēowode
2 sg.	ætēowast	ætēowodest
3 sg.	ætēowað	ætēowode
1–3 pl.	ætēowiað	ætēowodon

ætēowian: complete subjunctive

Person and number	Present subjunctive	Preterite subjunctive
1–3 sg.	ætēowie	ætēowode
1–3 pl.	ætēowien	ætēowoden

The present subjunctive can express "let … appear" in the wish or direction already learned. No separate lætan is needed for that meaning. Cook's actual form in the Creation text is **ætēowie**, without g. The documented weak-II i/ig(e)/g variation does not replace the selected i spellings in these tables.

ætēowian reference citations

Function	Form
Dictionary infinitive	ætēowian
Past-participle citation	ætēowod

The infinitive and past participle in this small table are dictionary reference forms. This unit's new productive system is finite indicative and subjunctive; it does not add commands or new nonfinite constructions of ætēowian.

Scīnan: subjunctive

The indicative of strong-I **scīnan "shine"** is familiar. Its complete subjunctive uses present scīn- and the preterite plural stem scin-. The long ī belongs to the present; the past subjunctive has short i, not the scān- of the preterite indicative singular.

scīnan: subjunctive

Person and number	Present subjunctive	Preterite subjunctive
1–3 sg.	scīne	scine
1–3 pl.	scīnen	scinen

Each singular or plural row covers all three persons, in both tenses. The subject and the clause determine the person; the subjunctive ending itself distinguishes the two numbers.

Geblētsian: commands

Weak-II **geblētsian "bless"** has singular imperative -a and plural -iað. Retain the prefix ge-. The number of people being blessed is the object's number; the command form depends on the number of people addressed.

geblētsian: commands

Person and number	Imperative
2 sg.	geblētsa
2 pl.	geblētsiað

Līf and the cognate accusative

Neuter **līf "life"** can name an individual life, with the ordinary plural "lives". Its long stem has no ending in nominative or accusative plural. The full declension is repeated here for this use.

līf: complete declension

Case	Singular	Plural
Nominative	līf	līf
Genitive	līfes	līfa
Dative	līfe	līfum
Accusative	līf	līf

Libban can take the related noun līf as a **cognate accusative**: "live one's life", "live our lives". The object names the life being lived; it is not a locative phrase. In "our lives", the possessive is neuter accusative plural **ūru**, agreeing with plural līf. This is a particular construction of libban with līf, not a rule permitting an arbitrary object after every intransitive verb. Cook I.8.8 refers to his §168.1.

Fill; have in one's control

Gefyllan, weak I, now also has the ordinary active sense **"fill"**, with the thing or place filled in the accusative. Keep this sense distinct from the earlier "finish, accomplish", as in finishing a work. The already learned finite and imperative forms serve both senses; no new endings are required.

Habban + accusative controlled entity + on + dative possessive/ gewealde means "have in one's control". Geweald is neuter; its dative singular is **gewealde**. An agreeing possessive takes dative neuter singular: for one addressee, **ðīnum**. The invariant possessor **his** keeps its form. This is the established control expression, not a spatial translation of English "under". The controlled persons or things remain the accusative object of habban.

7. Practice with forms and clauses

Use the selected table forms when a task requests a paradigm. In composition, preserve the stated person, number, tense and construction. The questions and relatives use the ordinary case patterns explained above.

Practice A. Complete forms

A1.
Give the nominative, genitive, dative and accusative singular of hwā and hwæt. Label each form and distinguish the common personal column from the neuter column.

A2.
Give the strong singular genitive, dative and accusative of hwilc in all three genders, and its nominative plural in all three genders.

A3.
Give the strong masculine accusative singular, feminine dative singular, neuter nominative plural and genitive plural of hwæðer and hūlic. Label every form.

A4.
Give the complete masculine singular and neuter plural declension of ilca. Explain why a strong alternative is not the model assigned here.

A5.
Give the nominative singular of self in all three genders, first strong and then weak. Also give its strong masculine accusative singular and strong dative plural.

A6.
Give the strong masculine accusative singular, feminine genitive singular, neuter nominative plural and dative plural of sum, ǣnig, gehwilc and swilc.

A7.
Give the complete singular and plural declension of līf. Explain why the plural in "our lives" is an ordinary contextual plural in this unit.

A8.
Give the complete present and preterite indicative of ætēowian, then the singular and plural present and preterite subjunctive. State which persons each subjunctive entry covers.

A9.
Give the singular and plural present and preterite subjunctive of scīnan, stating which persons each entry covers. Then give both second-person commands of geblētsian and identify the number of people addressed.

Practice Q. Questions

Q1.
Turn each statement into a yes/no question: Hē hæfð scip. Đā męnn sindon gōde. Đū gesāwe ðæt scip. Preserve person, number and tense.

Q2.
Translate into Old English: Who has that ship? Whom does the man see? What does the man have? State the case of each interrogative.

Q3.
Translate into Old English: To whom do you (sing.) give that fish? Whose ship do you (sing.) see? Explain what governs each interrogative case.

Q4.
Two men are being compared. Ask "Which of the two men has that ship?" using attributive hwæðer with singular mann. Then ask "What sort of ship is that?" using hūlic.

Q5.
Translate Hū swimð se mann? and Hwȳ swimð se mann? Explain the difference in the information requested.

Q6.
Ask “Do you (sing.) have any fish?” using ǣnig and singular fisc. A learner adds dōn because English uses do; explain why that addition is unnecessary.

Practice N. Pronouns and agreement

N1.
Translate Sum mann hæfð scip and Sume męnn habbað scipu. Identify the subject and object forms and explain the change in number.

N2.
Translate: Each man sees a ship. Use gehwilc and singular mann. Then replace “each man” with “each companion” without changing the meaning of the verb.

N3.
Translate: The other man has another ship. Use ōðer twice. Explain why “other/another” is not automatically “second” here.

N4.
Translate: I saw the same man. I give the fish to the same man. Use ilca and give the case of each complete noun phrase.

N5.
Translate Hē self geseah ðæt scip. Then translate “I save myself,” spoken by a man, using mē selfne. Distinguish emphasis on the subject from a reflexive object.

N6.
Translate Swilce męnn sindon gōde. Explain how the inflected word swilce differs from the invariant adverb swilce “likewise.”

N7.
Give a full Old English noun phrase for each: of some men (genitive); to any companion (dative); that same ship (accusative); such little birds (accusative). Label the case and relevant agreement.

Practice L. Relative clauses

L1.
Join Se mann is gōd and Se mann hæfð ðæt scip into one sentence with ðe meaning “The man who has that ship is good.” Identify the relative subject.

L2.
Join Ic geseah ðæt scip and Se mann hæfð ðæt scip into one sentence with ðe. Retain “I saw” as the main clause.

L3.
Combine Ic sęlle ðone fisc ðǣm męnn and Se mann mē healp. Use an inflected demonstrative followed by ðe for the relative. Label the antecedent case and relative case separately.

L4.
Combine Ic geseah ðone mann and Ic healp ðǣm męnn. Use an inflected demonstrative followed by ðe. Explain why the two references to the man have different cases.

L5.
Translate: You (sing.), who helped me, give me that fish. Use ðe and the preterite of helpan; identify the relative verb’s person and the command’s person.

L6.
Change the addressee of your L5 sentence to two or more people. Change every affected pronoun and finite verb, keeping the fish singular.

L7.
In Se mann, ðe ðæt scip hæfð, is mīn gefēra and Ic geseah ðæt scip, ðe se mann hæfð, identify each antecedent and each relative role. Does ðe itself change its spelling to show those roles? Then translate Se mann, ðæs scip ic geseah, is gōd and explain the case and function of ðæs and scip.

L8.
A learner says that an inflected relative must always have the same case as its antecedent. Correct that rule using L3 or L4. State the ordinary production target and the limited exception noted in the lesson.

Practice C. Lexical constructions

C1.

Translate: They finish the work. They fill the waters. Use gefyllan in both sentences and explain the difference of sense.

C2.

Translate: The man has all the animals in his control. Use on with the appropriate form of geweald and an invariant possessor. Then make it a command to one person, "Have all the animals in your control."

C3.

Translate: I live my life. We live our lives. State the case and number of each object and explain why libban can have that object here.

C4.

Translate: Dry land appears. Let dry land appear. Use ætēowian and identify the mood of each verb.

8. Cook I.8

Translate into Old English. Cook's complete exercise follows, with its original wording, parentheses and brackets. Where the English leaves an addressee's number or the number of "fish" unspecified, a consistent defensible choice is possible. Retain an explicitly specified singular or plural.

I.8.1.

Your works are good.

I.8.2.

His tree is fruit-bearing.

I.8.3.

Thou art the man.

I.8.4.

This year is the fourth.

I.8.5.

God made these little birds.

I.8.6.

He created me likewise.

I.8.7.

Our cattle (plur.) see the grass.

I.8.8.

We live our lives (168.1).

I.8.9.
His seeds grow in the earth.

I.8.10.
The animals rest (themselves).

I.8.11.
Fill the waters.

I.8.12.
Let dry land appear.

I.8.13.
Place (gesęte) the fish in the sea.

Supplied help for I.8.13. Gesęte is the exact supplied singular command of weak-I gesęttan "set, place". Use it as printed. For this placement, the thing placed is accusative and the location uses **on + dative**. Cook's comparable placement in heaven has a dative location. This local help supplies the prefixed command and this bounded frame; its unaided recall is not required.

I.8.14.
Have (sing.) all spirits under [in] your control.

I.8.15.
Let the stars shine in the heavens.

I.8.16.
I say indeed, Bless all men.

I.8.17.
Thou, who madest life, bless me.

9. The ship and the fish

New teaching dialogue. Three men are present. The first speaker asks his companion about the third man.

> On ðǣm strande sindon ðrīe męnn and ān scip. Sum mann cwið: "Hwā is se mann, ðe ðæt scip hæfð?" His gefēra cwið: "Se mann is mīn gefēra. Hē hæfð ðā fiscas, ðe wē sēoð." "Hwǣm sęlst ðū ðone fisc?" "Ic sęlle hine ðǣm męnn, se ðe mē healp." "Hwilc scip hæfð hē?" "Hē hæfð ðæt lȳtle scip, ðæt ðe ðū gesāwe."

Practice D. The connected dialogue

D1.
Translate the complete account "The ship and the fish." Keep the speakers and the three men's relationships clear.

D2.
In the account, list the direct questions. For each interrogative, give its role and the information requested.

D3.
In the answer beginning Ic sęlle, explain the roles and cases of hine, ðǽm męnn, se and mē. What identifies the man receiving the fish?

D4.
Rewrite the final answer so that the man has two little ships which you (sing.) saw. Preserve its relative construction and change all necessary forms.

10. The merchant and his merchandise

This exact four-turn opening is from Cook's *First Book*, "Trades and Occupations", printed pp. 129–130 / one-based PDF pp. 145–146. Page 129 has three unnumbered dialogue lines, counted editorially as 1–3; page 130 supplies printed lines 1–7. The original English speaker labels are retained.

Teacher. Hwæt sægst ðū, mangere?

Merchant. Ic sęcge ðæt behēfe ic eom ge cyninge and ealdormannum, and weligum, and eallum folce.

Teacher. And hū?

Merchant. Ic āstīge mīn scip mid hlæstum mīnum, and rōwe ofer sælice dǽlas, and cīepe mīn ðing, and bycge ðing dēorwierðu, ðā on ðissum lande ne bēoð āçennede, and ic hit tōgelǽde ēow hider mid miclum plihte ofer sǽ, and hwīlum forlidennesse ic ðolie, mid lyre ealra ðinga mīnra, unēaðe cwic ætberstende.

The excerpt ends with the merchant's escape from shipwreck. The following question, "Hwilc ðing gelǽdst ðū ūs?", and its goods catalogue are outside this selection.

Local help

All twelve groups below are supplied for the source-reading tasks. They give the unfamiliar words and constructions in their actual forms. The stated noun gender and verb or adjective class identify the headword; they do not require an unprinted complete paradigm for independent use. The question words and ordinary relative relation are learned material within these supported clauses.

H1. mangere

Mangere, masculine strong noun in -e: "merchant".
mangere, masculine, merchant; the nominative form is used in addressing him.

H2. ðæt behēfe ic eom; And hū?

Behēfe, strong adjective with nominative -e: "useful". **Ðæt** here is the supplied content conjunction.
I say that I am useful. This ðæt introduces a content clause; it is not the neuter demonstrative or a relative. behēfe means useful and takes the dative people to whom the merchant is useful. The next question And hū? abbreviates And how [are you useful]?; its omitted predicate is recovered from this answer. That exact ellipsis is supplied here, without teaching unrestricted question ellipsis.

H3. ge cyninge and ealdormannum, and weligum, and eallum folce

Cyning, masculine a-stem: "king"; **ealdormann**, masculine compound of mann: "leader, noble"; **welig**, strong adjective: "wealthy"; **folc**, neuter a-stem: "people". **Ge ... and** is the supplied correlative "both … and".
ge ... and coordinates the recipients: both to the king and to nobles, and to wealthy people, and to all the people. cyninge is dative singular; ealdormannum and weligum are dative plural; folce is dative singular. weligum is an adjective used substantivally.

H4. āstīge mīn scip mid hlæstum mīnum

Āstīgan, strong I, here "go aboard, board"; **hlæst**, neuter a-stem, plural here: "wares, cargo". **Mid** means "with" in the locally supplied phrases.
I board my ship with my cargo. āstīge is first singular present; scip is accusative, the thing boarded. mid governs dative hlæstum mīnum here. hlæst is neuter and is plural in this cargo expression.

H5. rōwe ofer sælice dælas
Rōwan, reduplicating strong verb: “row”; **sælic**, strong adjective: “of the sea”; **dæl**, masculine a-stem: “part”.
I row over sea regions / across stretches of sea. rōwe is first singular present; sælice dælas is accusative masculine plural after spatial ofer.

H6. cīepe mīn ðing, and bycge ðing dēorwierðu
Cīepan, weak I: “sell”; **bycgan**, irregular weak I: “buy”; **dēorwierðe**, strong adjective with nominative -e: “precious, valuable”.
I sell my goods and buy valuable things. cīepe and bycge are first singular presents. Both ðing phrases are accusative plural; mīn and dēorwierðu agree with neuter plural ðing.

H7. ðā on ðissum lande ne bēoð ācęnnede
Land, neuter a-stem: “land, country”; **ācęnnan**, weak I: “produce, bring forth”. The entire negative passive **ne bēoð ācęnnede** is supplied here as “are not produced”.
which are not produced in this land. The target relative ðā is nominative neuter plural, the subject inside its clause; its antecedent ðing is accusative in the main clause. lande is dative singular, neuter land. ācęnnede is a plural predicate past participle, are produced; its exact form is supplied, without assigning the whole verb or a general participial declension.

H8. ic hit tōgelǣde ēow hider
Tōgelǣdan, weak I: “bring”; **hider**, direction adverb: “hither, here”.
I bring it/the goods here to you. tōgelǣde is first singular present. ēow is dative plural recipient. hit is the actual neuter singular object used collectively for the merchandise; translate its reference, not as a new unrelated object. hider expresses movement hither.

H9. mid miclum plihte ofer sǣ
Pliht, masculine a-stem: “peril, risk”. Mid introduces the supplied circumstance of risk here.
at great risk across the sea. mid has a supplied circumstance use here and governs dative masculine singular miclum plihte. In ofer sǣ, sǣ has the same singular form in the accusative and dative. Across the sea motivates an accusative extent interpretation in this context, but the written form does not prove that case. No unique accusative answer is required from this surface alone; the task concerns the meaning across the sea.

H10. hwīlum forlidennesse ic ðolie
Hwīlum, adverb: “sometimes”; **forlidennes**, feminine -nes noun: “shipwreck”; **ðolian**, weak II: “endure, experience”.
sometimes I suffer shipwreck. hwīlum is a frequency adverb; forlidennesse is accusative feminine singular, the object of first singular present ðolie.

H11. mid lyre ealra ðinga mīnra
Lyre, masculine strong noun in -e: “loss”. Mid introduces the supplied circumstance of loss.
with the loss of all my things. lyre is dative masculine singular after mid; ealra ðinga mīnra is a genitive plural dependent of loss.

H12. unēaðe cwic ætberstende
Unēaðe, adverb: “with difficulty, barely”; **cwic**, regular strong adjective: “alive”; **ætberstan**, strong III: “escape”. Cwic is related to the earlier irregular source form cucu, but retains its own actual spelling and analysis here.
barely escaping alive. unēaðe means with difficulty/barely; cwic is nominative masculine singular referring to the merchant; ætberstende is a nominative singular present participle expressing his accompanying circumstance. The construction and exact forms are supplied.
Source presentation. The Old English words, spelling, quantities and punctuation are retained. Printed line wrapping is joined, and the original note cues are moved to the page-qualified list below. The speaker labels remain the source’s English labels. In the notes, typographical emphasis is represented as plain text and line-end word divisions are joined; the continuation of p. 129 note 5 is reunited with its beginning.

Cook’s original notes

These fifteen notes belong to Cook’s edition. Their numbers and grammar references are his, not the section numbers of this course. The local help above supplies the interpretation needed for the reading. All questions within these preserved notes are historical source commentary, not additional course tasks. The long etymological discussion in p. 129 note 5 is preserved as historical source commentary; it is not a new linguistic claim.

P. 129, note 1 (sægst). See 123.

P. 129, note 2 (mangere). Lat. mercator. Other Old English terms for merchant are cīepa and cīepmann. From a collateral form of the latter, cēapmann, without umlaut, is derived Mod. Eng. chapman. How is chap-

related to cheap? See the New English Dictionary (New Eng. Dict.) under these words.

P. 129, note 3 (behēfe). Lat. utilis. Cf. the Mod. Eng. noun behoof.

P. 129, note 4 (ge). ge . . . and = Lat. et . . . et.

P. 129, note 5 (cyninge). Carlyle (Sartor Resartus, Bk. 3, Chap. 7) has the following: "König (King), anciently Könning, means Ken-ning (Cunning), or which is the same thing, Can-ning. Ever must the Sovereign of Mankind be fitly entitled King." On the other hand Gummere (Germanic Origins, p. 270): "At the head of the family we found, of course, the father; and at the head of the state we naturally look for the king. The word 'king' means the child or son of the tribe, its representative or even creation; man of race, man of rank. Gradually the king ceases to be regarded as a creation of his race; his ancestry is pushed back to the gods, and his right is quite above all sanctions of popular choice or approval." Which of these views is confirmed by etymology?

(This original note continues on p. 130.)

P. 129, note 6 (ealdormannum). Lat. ducibus.

P. 130, note 1 (hlæstum). Lat. mercibus.

P. 130, note 2 (rōwe). Lat. navigo.

P. 130, note 3 (sǣlice). Lat. marinas.

P. 130, note 4 (dǣlas). Lat. partes.

P. 130, note 5 (cīepe). Lat. vendo.

P. 130, note 6 (ðing/dēorwierðu). Lat. res pretiosas.

P. 130, note 7 (tōgelǣde). Lat. adduco.

P. 130, note 8 (plihte). Lat. periculo. Mod. Eng. form of pliht?

P. 130, note 9 (unēaðe/cwic/ætberstende). Lat. vix vivus evadens. Note the love for alliteration, even in the Latin.

Practice R. The original dialogue

R1.

Translate the complete Merchant and Teacher excerpt using the local helps. Preserve who speaks each question and answer.

R2.

Identify the direct questions in the excerpt and explain what each asks. Use the local help for the merchant's form of address.

R3.
In ðā on ðissum lande ne bēoð āceŋnede, identify the antecedent, the role of ðā and the number of the passive auxiliary. Use the supplied participle meaning.

R4.
Using the local helps, explain how the merchant obtains his goods and where he takes them. Distinguish these statements from the dangers he encounters.

R5.
Identify two expressions for dangers in the final answer, and explain the contribution of the closing words unēaðe cwic ætberstende. Use the supplied meanings and construction notes.

11. Cumulative practice

Practice X. Questions, reference and clause relations

X1.
Translate: Which men have the ships that you (sing.) saw? Use hwilc and ðe. Label the interrogative, antecedent and relative roles.

X2.
Translate: I give another fish to the same man who helped me. Use ōðer, ilca and an inflected demonstrative followed by ðe.

X3.
Translate: Do you (sing.) see any little birds? Use ǣnig with plural fugol and the appropriate form of lȳtel.

X4.
Translate: Each companion himself saw that ship. Use gehwilc and strong self. Then make the whole statement a direct yes/no question.

X5.
Translate: The man who has the ship says, “Let dry land appear.” Use ðe and retain a direct quotation.

X6.
Explain the different functions of ðæt in ðæt scip and ðæt ðe ðū gesāwe in the account. Does their identical spelling make both conjunctions meaning “that”?

Source and editorial notes

The principal sources are Albert S. Cook, *A First Book in Old English: Grammar, Reader, Notes, and Vocabulary*, second edition, revised and enlarged (Ginn, 1895), and *Exercises in Old English* (Ginn, 1895). The complete I.8 prompts are printed on Exercises p. 4 / PDF p. 12. The original reader is the opening of "The Merchant and his Merchandise" on First Book pp. 129–130 / PDF pp. 145–146. No historical author is claimed for the sixteen teaching examples or the new ship dialogue.

The pronoun systems and relative strategies follow Cook §§86–89, with the strong and weak endings in §§57–60; the supporting checks include Wright §§463–464 and 468–471 and Fulk §§35 and 77. The selected tables are complete paradigms built from checked lexical stems and inflection rules, not claims that every cell is individually attested in this excerpt. The bounded recognition note on case attraction qualifies the ordinary internal-case rule.

The additional systems use Cook's weak-II account in §§118–119, strong-I scīnan in §102, and the subjunctive endings in §§93–95. Cook §168.1 supplies the cognate accusative of libban. The source appearance form is ætēowie on First Book p. 124 / PDF p. 140, with note 20 directing the reader to ætēowian; the dictionary entry is on p. 275 / PDF p. 291. The contrasting transitive ætīewan is a different entry. The placement witness is p. 125 / PDF p. 141, printed line 15; the have-in-control witness is p. 127 / PDF p. 143, printed line 9. These short witnesses support the particular frames taught or supplied here; they do not assign the surrounding Creation passages.

Dictionary compound hyphens are omitted in the displayed headwords ealdormann, āstīgan, dēorwierðe, āçennan, tōgelǣdan, forlidennes, unēaðe, ætberstan, ætēowian and geseȩttan. Their running source spellings and quantities remain unchanged. Cook's hūlic is retained beside the separately documented hūlīc spelling. All PDF pages cited here are one-based: the selected First Book scan uses printed page +16 and the Exercises scan +8; Wright uses +20 and Fulk +12.
