UNIT 13

Clause order and reference

A sentence may begin with its subject, an object, an adverbial, or a dependent clause. Its opening words do not by themselves identify the participants. This unit brings clause structure, agreement and reference together, then applies them to a connected narrative.

Sections 6–8 supply the vocabulary, forms and constructions required by the practice. The four Cook sets are retained in full: 15, 13, 12 and 12 items.

Examples 1–12, Exercises F, A, C, R and S, and The bishop and the monk are new teaching material. The final reading preserves the selected Old English of Cook's The Passing of Chad; its English orientation and local helps are separate additions. The original notes remain at the end, with their exact attachment points.

Scope. "Production" means use in the senses and constructions taught here or earlier. "Reference" forms are for recognition; their display does not add a new meaning or construction. "Supplied help" stays visible while a task is done and is not a test of unaided recall. In tables, 1, 2 and 3 mean first, second and third person; sg and pl mean singular and plural. Nominative, genitive, dative and accusative are abbreviated N, G, D and A only in diagnostic headings. Preserve the printed distinction between e and ę and the marked vowel lengths.

1. Clause roles and the first constituent

Find the finite verb and its subject before deciding how to translate the order. The nominative marks the subject; an accusative may be a direct object, but its role must also fit the verb. Agreement and the verb's construction help when endings coincide. A constituent is a whole phrase functioning as a unit: se munuc and ðone sang each contain two words but each is one constituent.

Example 1.

Se munuc hīerde ðone sang.

The monk heard the song.

Se munuc is nominative; ðone sang is accusative. The finite verb hīerde agrees with the singular subject.

Example 2.

Ðone sang hīerde se munuc.

The monk heard the song.

The object phrase comes first. Its accusative ending still makes it the object. The finite verb follows that complete phrase, not the first written word.

Example 3.

Ðā hīerde se munuc ðone sang.

Then the monk heard the song.

The initial adverb ðā means "then." Here the finite verb precedes the noun subject. This is a common main-clause order after an initial constituent.

Finite-second order is a tendency, not a requirement. It concerns constituents, not word counts. A coordinating and, ac or oððe does not itself count as the first constituent of the following clause. Fronting gives a constituent a prominent position, but the exact effect depends on context; no change of case follows merely from a change of order.

2. Dependent clauses and limits on order rules

A dependent clause has its own finite verb and subject. Its finite verb often comes late, frequently last. The conjunction or relative marker begins the clause; it is not its subject unless the construction makes it so. Identify the boundary of each clause before comparing orders.

Example 4.

Ðā hē ðone sang hīerde, ðā ēode hē tō ðæm bisceope.

When he heard the song, he went to the bishop.

The first ðā means "when" and introduces the dependent clause ending in hīerde. The second means "then" and belongs to the main clause. Both occurrences of hē refer to the person already in view; the order alone does not supply his identity.

Example 9.

Se munuc, ðe se bisceop grētte, ēode tō ðære cirican.

The monk whom the bishop greeted went to the church.

Invariant ðe introduces the relative clause and refers back to se munuc. The monk is the subject of ēode, but is the person greeted inside the relative; se bisceop is the relative clause's subject. Keep the two roles separate.

Example 10.

Đā se bisceop cōm, đā sungon đā brōđor.

When the bishop came, the brothers sang.

The first đā introduces "when the bishop came"; the second is the main-clause adverb "then." The last đā is the plural demonstrative with brōđor. The plural subject agrees with sungon.

After an initial adverbial a subject pronoun may precede the finite verb. The following short source fragment gives an actual instance. It belongs to the continuation of the Chad passage, outside the continuous extract assigned below.

Æfter ðon hē underðēodde

After that he added

Order help. This complete fragment is supplied as corroborative evidence outside the assigned continuous reading. Æfter ðon means after that; hē is Chad; underðēodde means added to his speech (Cook note13: Latin subjunxit). Identify its order only; no independent translation or lexical recall is required. The fronted temporal phrase is followed by subject pronoun, then finite verb.

The initial phrase Æfter ðon is followed by hē and then underðēodde. Thus even counting constituents does not turn main-clause finite-second order into a universal rule.

The assigned reading also contains a dependent clause whose finite verb is followed by another constituent:

ðæt hē ærest gehīerde fram ēastsūðdæle heofones

Order help. This is a fragment of the assigned Chad reading: "that he first heard [the sound and song] from the south-eastern part of the sky." Hē is Owini; gehīerde is the finite preterite "heard"; fram ēastsūðdæle heofones names the origin of the sound and follows that verb inside the content clause. The objects have been fronted earlier in the full sentence, as Cook note 152.8 explains; they are supplied in brackets only in the English help.

Identify the order with this help; no independent recall of the supplied forms is required.

The phrase beginning fram follows gehīerde inside the ðæt clause. “Often late” therefore does not mean “always last.” Cook 25.7 nevertheless asks for a final verb in its specified relative clause. A stated exercise target can select one order without declaring every other order ungrammatical.

3. Pronouns and sustained reference

A pronoun agrees with the grammatical gender and number of its antecedent. Its case expresses its role in its own clause. Masculine hē or hine can therefore refer to a masculine thing; English may require “it.” Agreement restricts the possible antecedents but need not select one uniquely.

Example 5.

Se sang wæs swēte. Hē wæs ēac wynsum.

The song was sweet. It was also pleasant.

Sang is masculine. Hē refers to the song, so English uses “it.” The pronoun’s nominative case belongs to its own clause.

Example 6.

Se bisceop geseah ðone munuc and grētte hine.

The bishop saw the monk and greeted him.

The second finite verb shares the bishop as its subject. Hine is accusative and refers to the monk, who receives the greeting. The preceding direct object does not become the next subject automatically.

Example 7.

Se bisceop geseah ðone munuc. Hē wæs on ðǣm hūse.

The bishop saw the monk. He was in the house.

Both men are masculine singular. Hē can refer to either without a fuller context. Neither the nearest noun nor the previous subject is an infallible rule. Repeating the intended noun phrase removes the ambiguity.

In a longer passage, keep a separate record for each participant and for any thing later named by a pronoun. Recheck the reference when a new subject, apposition or quotation appears. A statement such as hē, se bisceop makes the reference explicit at that point; it need not give every earlier hē the same referent.

4. Coordination and omitted material

Two coordinated predicates can share an expressed subject, as in Example 6. Two coordinated clauses may instead have different subjects and omit a repeated predicate. Recover only what the syntax and context support.

Example 11.

Se bisceop wæs on ðǣm hūse, and se munuc on ðǣre cirican.

The bishop was in the house, and the monk in the church.

The second clause has its own subject, se munuc, and omits the repeated copula. Both subjects here are singular. If a restored verb belongs to a plural subject, it must have plural agreement; recovering the lexical predicate does not license copying a singular ending.

Coordinate clauses remain separate for agreement and reference. The same caution applies when one clause contains several verbs: a shared subject is recovered from the construction, not from proximity to the last noun.

5. Speech and long sentences

Example 8.

Se bisceop cwæð: “Ic wille mid ēow sprecan.”

The bishop said, “I want to speak with you.”

Within the quotation, Ic is the bishop and ēow addresses several people. Sprecan with mid and the dative means “speak with”; the plain infinitive follows wille.

Example 12.

Hē sægde ðæt se sang swēte wǣre.

He said that the song was sweet.

Ðæt introduces reported content. Se sang is its subject and wǣre its finite verb. The report subjunctive does not decide who an otherwise ambiguous pronoun refers to.

Direct speech has its own first and second persons. In an indirect report, a third-person pronoun must be resolved from the reporting context. Questions and negatives keep their previously taught constructions: a yes/no question may begin with the finite verb; an interrogative word has a role within its question; ne belongs with the finite verb, and negative concord remains possible. No new negative-copula contraction is required here.

For a long sentence, first mark each finite verb. Then bracket conjunction and relative clauses, identify each subject, and attach the remaining complements to the verb that governs them. Resolve pronouns only after these relations are clear. Finally restore the temporal sequence and translate in connected English. Coordination, parenthesis and direct speech each need their own boundaries.

One supported construction in the Chad reading has objects placed before a reporting clause even though their verb is inside the following content clause. Cook's note identifies that dependence. Use the printed help to analyse it; the unit does not ask you to create new sentences by freely moving material out of embedded clauses.

6. Nouns and adjectives

The following vocabulary gives the ordinary meanings needed in this unit. The genitive connects one noun with another; prepositions and verbs determine their own governed cases. A complete declension supplies forms, not a permission to substitute any case in any construction.

Noun	Gender	Meaning
īdelnes	feminine	idleness
mōdor	feminine	mother
synn	feminine	sin
dohtor	feminine	daughter
bisceop	masculine	bishop
mynster	neuter	monastery
leornung	feminine	study; learning
cirice	feminine	church
unrihtwīsnes	feminine	unrighteousness
sang	masculine	song
līchama	masculine	body
ēagðȳrel	neuter	window
dǣl	masculine	part
rōd	feminine	cross
æx	feminine	ax
adesa	masculine	hatchet
wyrttruma	masculine	root
untrymnes	feminine	infirmity

Continued on the following page.

Noun	Gender	Meaning
gefērscipe	masculine	companionship
gelēafa	masculine	faith
wundor	neuter	wonder
hęll	feminine	hell
hrōf	masculine	roof
mēd	feminine	reward
æcer	masculine	field
ofen	masculine	oven
brōðor	masculine	brother
forðfōr	feminine	departure
weg	masculine	way; path
frēond	masculine	friend
burg	feminine	town; city
word	neuter	word

The plural forms of īdelnes, leornung, unrihtwīsnes, untrymnes, gefērscipe, gelēafa and hęll are reference forms only. Their assigned abstract senses are singular. All other noun systems below give productive N, G, D and A forms in both numbers, within the meanings just listed. The source spelling ciricean and its sense “oratory” are supplied separately with the reading.

6.1. Complete noun models

Strong masculines of the bisceop type have singular N/A with no ending, G -es and D -e; plural N/A -as, G -a and D -um. Retain the vowels in bisceop, æcer and ofen. In gefērscipe, remove citation -e before adding another ending; N/A and D singular retain -e.

Strong neuters have G singular -es, D singular -e, G plural -a and D plural -um. Their N/A plural is lexical: word and wundor have no added ending; ēagðȳrel and mynster select -u with the shortened stem. Before vowel endings, mynster loses its second e, ēagðȳrel its second e, and wundor its o: mynstr-, ēagðȳrl-, wundr-. Keep the full citation form wherever the tables show it.

Long feminine nouns have singular N with no added ending and G/D/A -e; selected plural N/A/G -a and D -um. Plural N/A -e is also found. Æx retains æ throughout: no masculine æ/a alternation applies. Nouns in -nes double s

before an ending. In leornung, the selected oblique singular ending is -e; -a is a documented alternative.

Weak masculine nouns have N singular -a, all other singular cases and N/A plural -an, G plural -ena and D plural -um. Weak feminine cirice has N singular -e and follows the same selected endings otherwise. Its productive stem is ciric-.

Kinship nouns require their full tables. Mōdor, dohtor and brōðor have unchanged N/G/A singular, but D singular mēder, dehter and brēðer. Dohtor has short o. Burg has byrig in selected G/D singular and N/A plural. Frēond follows the earlier fēond pattern, with frēond- and frīend-; its selected G plural is frēonda.

Table 1. īdelnes: feminine noun

Case	Singular	Plural
Nominative	īdelnes	īdelnessa
Genitive	īdelnesse	īdelnessa
Dative	īdelnesse	īdelnessum
Accusative	īdelnesse	īdelnessa

Plural: reference only.

Table 2. mōdor: feminine noun

Case	Singular	Plural
Nominative	mōdor	mōdru
Genitive	mōdor	mōdra
Dative	mēder	mōdrum
Accusative	mōdor	mōdru

Table 3. dohtor: feminine noun

Case	Singular	Plural
Nominative	dohtor	dohtor
Genitive	dohtor	dohtra
Dative	dehter	dohtrum
Accusative	dohtor	dohtor

Table 4. bisceop: masculine noun

Case	Singular	Plural
Nominative	bisceop	bisceopas
Genitive	bisceopes	bisceopa
Dative	bisceope	bisceopum
Accusative	bisceop	bisceopas

Table 5. leornung: feminine noun

Case	Singular	Plural
Nominative	leornung	leornunga
Genitive	leornunge	leornunga
Dative	leornunge	leornungum
Accusative	leornunge	leornunga

Plural: reference only.

Table 6. cirice: feminine noun

Case	Singular	Plural
Nominative	cirice	cirican
Genitive	cirican	ciricena
Dative	cirican	ciricum
Accusative	cirican	cirican

Table 7. līchama: masculine noun

Case	Singular	Plural
Nominative	līchama	līchaman
Genitive	līchaman	līchamena
Dative	līchaman	līchamum
Accusative	līchaman	līchaman

Table 8. ēagðȳrel: neuter noun

Case	Singular	Plural
Nominative	ēagðȳrel	ēagðȳrlu
Genitive	ēagðȳrles	ēagðȳrla
Dative	ēagðȳrle	ēagðȳrlum
Accusative	ēagðȳrel	ēagðȳrlu

Table 9. æx: feminine noun

Case	Singular	Plural
Nominative	æx	æxa
Genitive	æxe	æxa
Dative	æxe	æxum
Accusative	æxe	æxa

Table 10. gefērscipe: masculine noun

Case	Singular	Plural
Nominative	gefērscipe	gefērscipas
Genitive	gefērscipes	gefērscipa
Dative	gefērscipe	gefērscipum
Accusative	gefērscipe	gefērscipas

Plural: reference only.

Table 11. wundor: neuter noun

Case	Singular	Plural
Nominative	wundor	wundor
Genitive	wundres	wundra
Dative	wundre	wundrum
Accusative	wundor	wundor

Table 12. brōðor: masculine noun

Case	Singular	Plural
Nominative	brōðor	brōðor
Genitive	brōðor	brōðra
Dative	brēðer	brōðrum
Accusative	brōðor	brōðor

Table 13. frēond: masculine noun

Case	Singular	Plural
Nominative	frēond	frīend
Genitive	frēondes	frēonda
Dative	frēonde	frēondum
Accusative	frēond	frīend

Table 14. burg: feminine noun

Case	Singular	Plural
Nominative	burg	byrig
Genitive	byrig	burga
Dative	byrig	burgum
Accusative	burg	byrig

Table 15. word: neuter noun

Case	Singular	Plural
Nominative	word	word
Genitive	wordes	worda
Dative	worde	wordum
Accusative	word	word

6.2. Diagnostic stems and shared models

The following rows give every noun's full diagnostic stem and its G singular, D singular and N plural. For a shared model, use the indicated table in the same case and number, replace its initial stem by the stated stem, and retain the complete ending. A zero ending remains zero. If the recipe specifies the citation form for uninflected N/A cells, use the full headword there. This is a complete route through both numbers, not a guess from one oblique form.

Noun	Stem	Model
īdelnes	īdelness	Table 1
mōdor	mōdr	Table 2
synn	synn	Table 9
dohtor	dohtr	Table 3
bisceop	bisceop	Table 4
mynster	mynstr	Table 8
leornung	leornung	Table 5
cirice	ciric	Table 6
unrihtwīsnes	unrihtwīsness	Table 1
sang	sang	Table 4
līchama	līcham	Table 7
ēagðȳrel	ēagðȳrl	Table 8
dǣl	dǣl	Table 4
rōd	rōd	Table 9
æx	æx	Table 9
adesa	ades	Table 7

weg	weg	Table 4
frēond	frēond / frīend	Table 13
burg	burg / byrig	Table 14
word	word	Table 15

Noun	**G singular**	**D singular**	**N plural**
īdelnes	īdelnesse	īdelnesse	īdelnessa
mōdor	mōdor	mēder	mōdru
synn	synne	synne	synna
dohtor	dohtor	dehter	dohtor
bisceop	bisceopes	bisceope	bisceopas
mynster	mynstres	mynstre	mynstru
leornung	leornunge	leornunge	leornunga
cirice	cirican	cirican	cirican
unrihtwīsnes	unrihtwīsnesse	unrihtwīsnesse	unrihtwīsnessa
sang	sanges	sange	sangas
līchama	līchaman	līchaman	līchaman
ēagðȳrel	ēagðȳrles	ēagðȳrle	ēagðȳrlu
dǣl	dǣles	dǣle	dǣlas
rōd	rōde	rōde	rōda
æx	æxe	æxe	æxa
adesa	adesan	adesan	adesan
wyrttruma	wyrttruman	wyrttruman	wyrttruman
untrymnes	untrymnesse	untrymnesse	untrymnessa
gefērscipe	gefērscipes	gefērscipe	gefērscipas
gelēafa	gelēafan	gelēafan	gelēafan
wundor	wundres	wundre	wundor
hęll	hęlle	hęlle	hęlla
hrōf	hrōfes	hrōfe	hrōfas
mēd	mēde	mēde	mēda
æcer	æceres	æcere	æceras
ofen	ofenes	ofene	ofenas
brōðor	brōðor	brēðer	brōðor
forðfōr	forðfōre	forðfōre	forðfōra
weg	weges	wege	wegas
frēond	frēondes	frēonde	frīend
burg	byrig	byrig	byrig
word	wordes	worde	word

Noun	Complete model	Operation in the corresponding cell
synn	Table 9	Replace æx- by synn-; retain the ending.
mynster	Table 8	In N singular, A singular, use the full citation mynster. Replace ēagðȳrl- by mynstr-; retain the ending.
unrihtwīsnes	Table 1	In N singular, use the full citation unrihtwīsnes. Replace īdelness- by unrihtwīsness-; retain the ending.
sang	Table 4	Replace bisceop- by sang-; retain the ending.
dǣl	Table 4	Replace bisceop- by dǣl-; retain the ending.
rōd	Table 9	Replace æx- by rōd-; retain the ending.
adesa	Table 7	Replace līcham- by ades-; retain the ending.
wyrttruma	Table 7	Replace līcham- by wyrttrum-; retain the ending.
untrymnes	Table 1	In N singular, use the full citation untrymnes. Replace īdelness- by untrymness-; retain the ending.
gelēafa	Table 7	Replace līcham- by gelēaf-; retain the ending.
hęll	Table 9	Replace æx- by hęll-; retain the ending.
hrōf	Table 4	Replace bisceop- by hrōf-; retain the ending.
mēd	Table 9	Replace æx- by mēd-; retain the ending.
æcer	Table 4	Replace bisceop- by æcer-; retain the ending.
ofen	Table 4	Replace bisceop- by ofen-; retain the ending.
forðfōr	Table 9	Replace æx- by forðfōr-; retain the ending.
weg	Table 4	Replace bisceop- by weg-; retain the ending.

Recognize these documented alternatives without replacing the selected course forms: mōdra for N/A plural mōdru; dohtru or dohtra for N/A plural dohtor; brōðru for N/A plural brōðor; late G singular mēder and dehter; G singular burge beside byrig; D singular frīend and N/A plural frēond or frēondas beside the selected frēonde and frīend. Cook's citation syn(n) includes syn beside selected synn. These alternatives do not change the listed meanings or case relations.

6.3. Adjectives and comparison

Adjective	Meaning
hālig	holy
swēte	sweet
līchamlic	bodily
hęfig	grievous
wynsum	pleasant; winsome
hwīt	white
wierðe	worthy
heofonlic	heavenly
swētra	sweeter
swētest	sweetest

Use strong and weak adjective forms in the environments already taught. The following complete tables cover N, G, D and A in all three genders and both numbers. Masculine and neuter singular instrumental forms are printed for reference; their display does not add independent productive instrumental syntax. Comparatives have weak inflection only. Superlatives have both strong and weak forms.

An adjective in -e loses that citation ending before another ending: swēte gives swēt-, wierðe gives wierð-. Their strong feminine N singular and neuter N/A plural have -u. Long monosyllables and swētest omit that -u. Līchamlic, hęfig, wynsum and heofonlic retain it in those cells.

Hālig needs its own full pattern: feminine N singular and neuter N/A plural are hālig. Before vowel endings use hālg-; before -ne, -re and -ra retain hālig-. Hęfig retains its medial vowel throughout the selected pattern. The weak G plural ending is selected -ra; -ena is also documented.

Swēte forms comparative swētra and superlative swētest. In the comparative G plural, swētr- plus -ra simplifies the doubled r after t, giving swētra. Do not mechanically write swētrra. The shared model for hwīt below is morphological only: “white” does not acquire the meaning “sweetest.”

Table 16. hālig: strong adjective

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	hālig	hālig	hālig
Genitive	hālges	hālges	hāligre
Dative	hālgum	hālgum	hāligre
Accusative	hāligne	hālig	hālge
Instrumental	hālge	hālge	as dative

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	hālge	hālig	hālga

Accusative	swētestan	swēteste	swētestan

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	swētestan	swētestan	swētestan
Genitive	swētestra	swētestra	swētestra
Dative	swētestum	swētestum	swētestum
Accusative	swētestan	swētestan	swētestan

Adjective	Stem	Strong feminine N singular	Weak masculine N singular	Complete model(s)
hālig	hālig	hālig	hālga	Table 16, Table 17
swēte	swēt	swētu	swēta	Table 18, Table 19
līchamlic	līchamlic	līchamlicu	līchamlica	Table 20, Table 21
hęfig	hęfig	hęfigu	hęfiga	Table 20, Table 21
wynsum	wynsum	wynsumu	wynsuma	Table 20, Table 21
hwīt	hwīt	hwīt	hwīta	Table 23, Table 24
wierðe	wierð	wierðu	wierða	Table 18, Table 19
heofonlic	heofonlic	heofonlicu	heofonlica	Table 20, Table 21
swētra	swētr	No strong comparative	swētra	Table 22
swētest	swētest	swētest	swētesta	Table 23, Table 24

Adjective	Complete model(s)	Operation in the corresponding cell
hęfig	Table 20, Table 21	Replace līchamlic- by hęfig-; retain the ending.
wynsum	Table 20, Table 21	Replace līchamlic- by wynsum-; retain the ending.
hwīt	Table 23, Table 24	Replace swētest- by hwīt-; retain the ending.
wierðe	Table 18, Table 19	Replace swēt- by wierð-; retain the ending.
heofonlic	Table 20, Table 21	Replace līchamlic- by heofonlic-; retain the ending.

7. Verbal systems

The finite tables give all three persons in both numbers. Present and preterite indicative are separate from the subjunctive, imperative, infinitive and participle systems. Learn each listed system as a whole, but use it only with its taught meaning and construction. A citation infinitive used to name a verb does not by itself assign that infinitive for sentence production.

Verb	Meaning
fordilgian	destroy; annihilate
gewunian	be accustomed; be wont
āscian	ask a person about something
hālsian	entreat; implore
wunian	dwell; remain
hatian	hate
āstręccean	prostrate (oneself)
onlīesan	release
nēalǣcan	approach; draw near
forceorfan	cut down; cut off
āsęttan	set; place
oferwinnan	overcome; conquer
gescrȳdan	clothe
ondrǣdan	fear
fordōn	destroy

Continued on the following page.

Verb	Meaning
ingān	enter; go in
āsęndan	send
behealdan	behold; look at
bebēodan	command; instruct
ęfthweorfan	return; turn back
lædan	lead; bring; take a person
sprecan	speak with someone
begān	pursue; practise study
āstīgan	descend
sęllan	sell
wyrcean	make; work; perform

7.1. Weak verbs

The selected weak II pattern has present -ie, -ast, -að, plural -iað; preterite -ode, -odest, -ode, plural -odon. The finite model below supplies every indicative cell for the six verbs in the diagnostic table. Alternative -ige and -ade formations are outside the selected pattern.

Table 25. fordilgian: present and preterite indicative

Person and number	Present	Preterite
1 sg.	fordilgie	fordilgode
2 sg.	fordilgast	fordilgodest
3 sg.	fordilgað	fordilgode
1–3 pl.	fordilgiað	fordilgodon

Verb	Stem	Present 3 sg	Preterite 3 sg	Complete model
fordilgian	fordilg	fordilgað	fordilgode	Table 25
gewunian	gewun	gewunað	gewunode	Table 25
āscian	āsc	āscað	āscode	Table 25
hālsian	hāls	hālsað	hālsode	Table 25
wunian	wun	wunað	wunode	Table 25
hatian	hat	hatað	hatode	Table 25

For gewunian, āscian, hālsian, wunian and hatian, replace initial fordilg- in every cell of Table 25 by gewun-, āsc-, hāls-, wun- or hat-, respectively.

Retain the rest of the cell exactly. This gives all twelve present and preterite indicative positions for each verb; no mood or nonfinite system is added by this substitution.

Weak I verbs add a dental preterite, but their present stems and consonant outcomes must be learned separately. Āstręccean alternates geminate and ungeminated present consonants; its unmutated past is āstreahte, not a past formed mechanically from stręcc-. Nēalǣcan selects nēalǣcte. The tables retain the distinct present, past and consonant patterns of onlīesan, āsęttan, gescrȳdan and āsęndan.

Table 26. āstręccean: present and preterite indicative

Person and number	Present	Preterite
1 sg.	āstręcce	āstreahte
2 sg.	āstręcst	āstreahtest
3 sg.	āstręcð	āstreahte
1–3 pl.	āstręcceað	āstreahton

Table 27. onlīesan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	onlīese	onlīesde
2 sg.	onlīest	onlīesdest
3 sg.	onlīest	onlīesde
1–3 pl.	onlīesað	onlīesdon

Table 28. nēalǣcan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	nēalǣce	nēalǣcte
2 sg.	nēalǣcst	nēalǣctest
3 sg.	nēalǣcð	nēalǣcte
1–3 pl.	nēalǣcað	nēalǣcton

Table 29. āsęttan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	āsętte	āsętte
2 sg.	āsętst	āsęttest
3 sg.	āsętt	āsętte
1–3 pl.	āsęttað	āsętton

Table 30. gescrȳdan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	gescrȳde	gescrȳdde
2 sg.	gescrȳtst	gescrȳddest
3 sg.	gescrȳt	gescrȳdde
1–3 pl.	gescrȳdað	gescrȳddon

Table 31. āsęndan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	āsęnde	āsęnde
2 sg.	āsęntst	āsęndest
3 sg.	āsęnt	āsęnde
1–3 pl.	āsęndað	āsęndon

7.2. Strong and irregular finite verbs

Strong verbs distinguish present, preterite singular, preterite plural and past-participle stems. The second singular preterite takes the same vowel grade as the plural. In forceorfan the present second and third singular use forcierf-; the past distinguishes forcearf from forcurf-. Oferwinnan and ęfthweorfan have their own related strong III patterns. Keep every change shown in the tables, including nn plus ð becoming nð and the selected consonant clusters before -st.

Table 32. forceorfan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	forceorfe	forcearf
2 sg.	forcierfst	forcurfe
3 sg.	forcierfð	forcearf
1–3 pl.	forceorfað	forcurfon

Table 33. oferwinnan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	oferwinne	oferwann
2 sg.	oferwinst	oferwunne
3 sg.	oferwinð	oferwann
1–3 pl.	oferwinnað	oferwunnon

Table 34. ęfthweorfan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	ęfthweorfe	ęfthwearf
2 sg.	ęfthwierfst	ęfthwurfe
3 sg.	ęfthwierfð	ęfthwearf
1–3 pl.	ęfthweorfað	ęfthwurfon

Principal-part support. Citation support: forceorfan, forcearf, forcurfon, forcorfen. These four printed parts identify the present, preterite singular, preterite plural and past participle stems. Keep the row visible; only the separately assigned systems and uses are recall targets.

Behealdan and ondrædan have the strong VII past stems behēold- and ondrēd-. Bebēodan has the strong II grades bēod-, bēad- and bud-, with bebīetst and bebīett in the present second and third singular. These lexical systems do not make every similarly prefixed verb predictable.

Table 35. behealdan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	behealde	behēold
2 sg.	behieltst	behēolde
3 sg.	behielt	behēold
1–3 pl.	behealdað	behēoldon

Table 36. ondrǣdan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	ondrǣde	ondrēd
2 sg.	ondrǣtst	ondrēde
3 sg.	ondrǣt	ondrēd
1–3 pl.	ondrǣdað	ondrēdon

Table 37. bebēodan: present and preterite indicative

Person and number	Present	Preterite
1 sg.	bebēode	bebēad
2 sg.	bebīetst	bebude
3 sg.	bebīett	bebēad
1–3 pl.	bebēodað	bebudon

Fordōn and ingān use the corresponding finite patterns of dōn and gān with their attested prefixes. The complete ingān subjunctive follows its indicative table. The new productive use is the present subjunctive in the worthy-content construction below; the other subjunctive cells complete the morphological system without adding new clause uses. The reading's ingangende is separately supplied and is not generated as a regular participle from ingān.

Table 38. fordōn: present and preterite indicative

Person and number	Present	Preterite
1 sg.	fordō	fordyde
2 sg.	fordēst	fordydest
3 sg.	fordēð	fordyde
1–3 pl.	fordōð	fordydon

Table 39. ingān: present and preterite indicative

Person and number	Present	Preterite
1 sg.	ingā	inēode
2 sg.	ingæst	inēodest
3 sg.	ingæð	inēode
1–3 pl.	ingāð	inēodon

Table 40. ingān: present and preterite subjunctive

Person and number	Present	Preterite
1 sg.	ingā	inēode
2 sg.	ingā	inēode
3 sg.	ingā	inēode
1–3 pl.	ingān	inēoden

7.3. Commands, infinitives and participle bases

The imperative table gives singular and plural commands for all four verbs. Winnan means “toil”; behealdan “behold”; ondrǣdan “fear”; lǣdan “lead or bring a person.” Prohibitions use the already taught ne with the appropriate command. The earlier begān command pair remains begā, begāð, now with the explicit sense “pursue study.”

Table 41. Complete singular and plural commands

Person and number	winnan	behealdan	ondrǣdan	lǣdan
2 sg.	win	beheald	ondrǣd	lǣd
2 pl.	winnað	behealdað	ondrǣdað	lǣdað

The plain infinitive follows taught modal and willan constructions. The inflected infinitive adds -ne after the plain infinitive’s final n, producing endings including -anne, -enne, -ianne and, in fordōnne, -ōnne. Use tō with the inflected form in previously taught functions and in the explicitly supported adjective expression below. The table does not introduce every possible infinitive construction.

Table 42. Complete plain and inflected infinitives

Verb	Plain infinitive	Inflected infinitive
āscian	āscian	āscianne
fordōn	fordōn	fordōnne
lǣdan	lǣdan	lǣdanne
sprecan	sprecan	sprecanne

The following table gives complete present and past participle base pairs. Base formation is a production target. In the passive constructions taught here, only the past base is used, uninflected, with wesan; the patient becomes the subject. The table does not introduce full attributive participle declensions or unrestricted uses of every present participle. Gescrȳd has one final d; distinguish the finite present gescrȳt from this past base.

Table 43. Complete present and past participle bases

Verb	Present participle	Past participle
fordilgian	fordilgiende	fordilgod
onlīesan	onlīesende	onlīesed
āsęttan	āsęttende	āsętt
gescrȳdan	gescrȳdende	gescrȳd
āsęndan	āsęndende	āsęnd

8. Ordinary constructions and smaller words

Learn a verb with the case or clause it governs. English prepositions are not a reliable guide to the Old English construction. The following frames state the uses required by the exercises; an accusative object remains accusative when it is fronted.

8.1. New finite verbs

Word or expression	Construction
fordilgian	Destroy an accusative thing. The corresponding passive uses the uninflected past participle with wesan.
gewunian	Be accustomed to a plain infinitive. The subject of the finite verb also performs the infinitive's action.

Continued on the following page.

Word or expression	Construction
āscian	Ask an accusative person about a genitive thing. A supported indirect question can give the content; do not use two accusatives for person and thing.
āstręccean	Prostrate oneself: the reflexive pronoun is accusative and refers to the subject.
onlīesan	Release an accusative person or thing. In the passive, use the uninflected past base onlīesed with wesan.
nēalǣcan	Approach a goal expressed by tō with the dative.
hālsian	Entreat an accusative person. A requested action may be expressed by ðæt with the subjunctive.
forceorfan	Cut down an accusative tree or other object.
āsęttan	Set or place an accusative object. The passive uses the uninflected past base with wesan; the placement phrase has its own case requirements.
wunian	Dwell or remain, either without a complement or with an ordinary static location.
oferwinnan	Overcome an accusative person or force.
gescrȳdan; mid	Clothe an accusative person; mid with the dative names the garment. The passive retains mid with the dative. English “clothed in” does not require Old English on.
ondrǣdan	Fear an accusative person or thing. A dative pronoun referring to the subject is possible but need not be added to every sentence.
fordōn	Destroy accusative persons or things. Its plain infinitive can follow a taught modal.
ingān	Enter or go in. In the supported roof-entry construction, under governs an accusative noun phrase.
āsęndan	Send an accusative person or thing. The corresponding passive uses the uninflected past base with wesan.
behealdan	Behold or look at an accusative object.
hatian	Hate an accusative person.
bebēodan	Command a dative addressee. A ðæt clause may express the command with the subjunctive; a relative can identify what is commanded.
ęfthweorfan	Return or turn back, without a direct object. A route expression can specify the way.

8.2. Additional senses of familiar verbs

Word or expression	Construction
lǣdan	Lead, bring or take an accusative person. Mid with the dative can name a companion, and hider can give the direction “here.”
sprecan; mid	Speak with someone: mid with the dative names the interlocutor.
begān	Pursue or practise an accusative activity, including leornung “study.” Use the finite and command forms already taught.
āstīgan; of	Descend; of with the dative marks the source. This is an additional meaning of the previously encountered verb.
sęllan	Sell an accusative possession. This sense is distinct from the earlier meaning “give.”
wyrcean	Make an accusative thing. Its earlier “work; perform” sense also permits an accusative deed, including abstract wrongdoing.

8.3. Other required constructions

Word or expression	Construction
ðȳ ilcan wege	“By the same way”: ðȳ is instrumental; ilcan and wege have the already familiar dative shapes in this route expression. Learn the whole expression; it does not add a new ilca declension.
wynsum tō hīeranne	“Pleasant to hear”: tō takes the inflected infinitive. The adjective agrees with what is pleasant. This expression supplies the evaluative use needed here.
ge … ge	“Both … and”: the paired conjunction joins parallel constituents. Both occurrences have short e.
beforan	Before a person, with the accusative in a movement or positioning construction. A static dative is also a valid construal; follow the requested exercise target where one is given.
wið	Beside, with the accusative, including static standing beside someone. This accusative does not itself express motion.
under	Under, with the accusative for entering beneath a roof. Keep this distinct from the earlier static under with the dative.
wierðe	Worthy, with a ðæt clause and present subjunctive for the proposed entry. This bounded construction uses ingān; it does not introduce a general rule for every adjective.
hwilc	Any or some, as an indefinite adjective. This use is distinct from the interrogative “which?”; agreement follows the noun qualified.
dōn wel	Do well to a person in the dative, without an expressed object naming a deed.
singan	Sing an accusative song: sang can be the direct object although it names the action’s own product.

In familiar verbs, the earlier inflection remains available, but the meanings just specified must be learned separately. Thus knowing sęllan “give” did not by itself establish “sell,” nor did knowing mid for accompaniment establish its conversational or clothing use.

Word	Meaning and use
ðǣr	there
ęft	again; back
of	out of; from, governing dative
būtan	without, governing dative
oð	up to; until, governing accusative
ðider	thither; to that place
ǣr	before; earlier
ǣrest	first; at first
styccemǣlum	little by little
nēah	near; at hand
oððe	or
ge	both ... and (paired ge ... ge)

Distinguish ðǣr "there," a location, from ðider "to that place," a direction. Here ęft has the explicitly taught sense "again; back"; the reading also supplies its contextual translation "afterwards." Nēah in the ordinary expression "be near" or "be at hand" is an adverb. Oð with the accusative marks a limit; the reading separately supplies the conjunction oð-ðæt "until."

9. New practice

For analysis tasks, preserve all possible references when the context does not decide between them. For composition, meet the stated target while keeping the intended participants, agreement and meaning. A valid alternative order and compliance with a particular requested order are separate questions.

Forms

F01

Give the complete nominative, genitive, dative and accusative singular and plural of mōdor, dohtor and brōðor. Explain the selected oblique and plural stems.

F02

Give the complete nominative, genitive, dative and accusative singular and plural of æx and ēagðȳrel. Explain the retained stem in æx and the syncopated stem before endings in ēagðȳrel.

F03

Give the genitive and dative singular and the nominative and genitive plural of cirice, mynster and wyrttruma. State the model used for each.

F04

For swēte, give all strong nominative, genitive, dative and accusative singular and plural forms in all three genders. Then give the weak masculine nominative singular of its comparative and both strong and weak masculine nominative singular of its superlative. Explain the stems and endings.

F05

Give the complete present and preterite indicative of forceorfan: all three persons in singular and plural. Using the printed principal parts, explain the present singular changes and the distribution of preterite stems.
Supplied help. Citation support: forceorfan, forcearf, forcurfon, forcorfen. These four printed parts identify the present, preterite singular, preterite plural and past participle stems. Keep the row visible; only the separately assigned systems and uses are recall targets.

F06

Give the singular and plural commands of winnan, begān and behealdan. For fordilgian and onlīesan, give the base present and past participles.

Clause analysis and reference

A01

Translate both clauses. Identify the subject, direct object and finite verb in each; explain which forms settle the participants.
Se bisceop grētte ðone munuc.
Ðone munuc grētte se bisceop.

A02

Divide this sentence into clauses; identify each finite verb and its subject. Label every ðā, and translate the whole sentence.
Ðā se munuc cōm, ðā grētte se bisceop ðā brōðor.

A03

Translate. Identify the main finite verb and the relative-clause finite verb; give the relative antecedent and its role in each clause.
Se bisceop, ðe se munuc grētte, sæt on ðǣm hūse.

A04

Translate. Identify the person greeted, the person who gave the food, and the recipient. Explain the understood subject and the pronoun cases.
Se munuc grētte ðone bisceop and sealde him ðone męte.

A05

Translate the second sentence after each context. State the referent of hē in each; explain what morphology establishes and what the context establishes.
Se sang wæs swēte. Hē wæs wynsum.
Se bisceop cōm. Hē wæs on ðǣm hūse.

A06

Give both possible referents of hē in the second sentence. Is either one selected by gender and number alone? Rewrite that sentence twice, naming each possible subject explicitly.
Se bisceop geseah ðone munuc. Hē sæt on ðǣm hūse.

A07

The monk addresses the bishop. Translate, and identify each speaker/addressee reference in the quotation.
Se munuc cwæð: “Ic hīerde ðone sang. Hīerdest ðū hine?”

A08

Translate. Identify the content-clause boundary, its finite verb, and the antecedent of hē. The monk is reporting his own presence.
Se munuc sægde ðæt hē on ðǣm hūse wǣre.

A09

Translate, restoring the omitted repeated predicate in English. Then write the second clause in Old English with that predicate expressed and agreeing with its own subject.
Se bisceop wæs on ðære cirican, and ðā brōðor on ðǣm hūse.

A10

Translate both sentences. Explain which clause each initial phrase belongs to and identify the finite verbs. Are initial words themselves a reliable way to decide who performs an action?
On ðǣm hūse sæt se munuc.
Ðā se munuc on ðǣm hūse sæt, ðā cōm se bisceop.

A11

Translate and draw the clause structure, using brackets or indentation. Identify the subject of every finite verb and the referent/function of ðe and ðā.

Đā se munuc, ðe se bisceop grētte, cōm, ðā sungon ðā brōðor.

A12

A learner says: "Every main clause has the finite verb as its second word, and every dependent clause puts it last." Explain two problems with this statement, referring to the chapter's checked examples. Then explain why Cook 25.7 can nevertheless require a final verb as a particular exercise target.

The two source fragments and their complete supplied order help are in §2. Keep that help visible for this analysis.

Composition

C01

Translate "The brothers heard the song" twice: first with the subject phrase first, then with the object phrase first. Keep the same participants.

C02

Translate: Then the bishop greeted the brothers. Begin with ðā and place the finite verb before the nominal subject.

C03

Translate: When the brothers came, the bishop sang. Use a ðā temporal clause and a main-clause correlative ðā; use a late verb in the dependent clause.

C04

Translate: The brothers whom the bishop greeted went to the church. Use invariant ðe and keep the relative beside its antecedent.

C05

Translate as two sentences: The bishop greeted the monk. The monk then went to the church. Repeat the second subject as a noun phrase so that the reference is explicit.

C06

The monk addresses several brothers. Translate: The monk said, "I want to speak with you." Preserve the person and number appropriate to direct speech.

C07

Translate: The monk saw the bishop and greeted him. Express the subject once; both actions have that subject.

C08

Translate: When the bishop whom the monk greeted came, the brothers sang. Use ðe, temporal ðā and a correlative main-clause ðā. Mark the three clauses after writing the sentence.

10. Cook VII.22–25

Translate each English sentence into Old English. The wording, item numbers and original grammatical controls are retained. Parenthesized English and Old English belong to Cook's prompt. Keep the local helps visible; supplied forms and constructions are not independent recall targets. Original section references are explained in the editorial notes.

Cook's 87.b requests an inflected demonstrative followed by ðe. Its gender and number follow the antecedent, while its case follows its role inside the relative clause; use this strategy in 24.9, 25.1 and 25.6. Cook's 87.d requests invariant ðe alone; use it in 25.7. These are the relative strategies taught in Unit 8. A different grammatical strategy can preserve the meaning while missing the stated exercise target.

Cook VII.22

Items 1–15. Use the ordinary senses and verb constructions in §8, including the explicit new senses of familiar words.

Cook VII.22.1

Idleness is the mother of sin.

Cook VII.22.2

Etheldred was (om. the) daughter of the king of the East Anglians.

Supplied help. Supply Æðelðrȳð as the nominative personal name and Eastęngla as the genitive plural "of the East Anglians." No productive proper-name system is assigned.

Cook VII.22.3

The bishop's beautiful monastery was destroyed (fordilgian).

Cook VII.22.4

Labor [toil, sing.] with your hands.

Cook VII.22.5

Pursue (sing.) your study.

Cook VII.22.6

He goes to church.

Cook VII.22.7

Depart from me, ye that work unrighteousness.

Cook VII.22.8

What is your name?

Cook VII.22.9

Tell (hātan) our three friends to go thither to him.

Cook VII.22.10

The song descends from heaven (plur.) to earth.

Cook VII.22.11

I am wont to visit the bishop.

Cook VII.22.12

I wish (willan) first (om. to) ask you (sing.) one thing (156).

Cook VII.22.13

I wish to take (lǣdan) him with me.

Cook VII.22.14

The priest prostrated himself before (beforan, 172) the bishop.

Cook VII.22.15

On the third day the holy soul was released from the body.

Cook VII.23

Items 1–13. The supplied placement, taking and wonder constructions are local to their items.

Cook VII.23.1

The largest window of the church is two feet (154. c) broad, and four feet high.

Cook VII.23.2

Little by little the sweet song drew nigh.

Cook VII.23.3

I entreat you to tell [that you tell] me what is (194. b) the angel's name.

Cook VII.23.4

The soldiers took his raiment, and made (wyrcean) four parts, (om. to) every soldier a part; thus did the soldiers.

Cook VII.23.5

The mother of Jesus stood by (wið, 172) the cross.

Cook VII.23.6

Many read this writing.

Cook VII.23.7

With his little hatchet he cut down (forceorfan, 134) the tree.

Cook VII.23.8

The ax is placed (āsęttan) into (tō) the root (wyrttruma, 53) of the trees.

Supplied help. Ðǽra is the supplied genitive plural variant corresponding to ordinary ðāra. It agrees with the plural trees.

Supplied help. For the local placement phrase, use tō with dative wyrttruman and a genitive plural trees phrase. The phrase denotes placement at/to the root; it does not create a general static tō rule.

Cook VII.23.9

He took an ax in his hand.

Supplied help. For this taking action, the bounded phrase on his hand means "into his hand," with accusative hand. This is a declared composition applying Cook's qualified directional use of on and the ordinary sense of niman; it is not an attested Old English quotation or a general productive niman-plus-goal rule. A static dative "in his hand" is a defensible alternative construal.

Cook VII.23.10

Sell (sęllan) me five hatchets.

Cook VII.23.11

His bodily infirmity was very grievous.

Cook VII.23.12

Your companionship is very pleasant.

Cook VII.23.13

Is it any wonder that [though] the faith of God grew (196. e)?

Supplied help. In the local wonder question, hit anticipates the following circumstance. Wundor is a nominal predicate; ðēah introduces the

conceded circumstance with a preterite subjunctive. An admitted fact is compatible with this subjunctive.

Cook VII.24

Items 1–12. The relative controls and the supports beside the longer sentences remain part of the task.

Cook VII.24.1

He that (sē ðe) sitteth on the throne shall dwell (wunian) in the midst of them.

Supplied help. Sē is the retained long source spelling of the nominative masculine singular demonstrative/relative. The ordinary short se remains a valid taught alternative; the added quantity is not an independent recall target.

Cook VII.24.2

Angels are spirits without body.

Cook VII.24.3

I saw a star (169) fall from heaven unto [until] the earth.

Supplied help. Feallan is the supplied plain infinitive "fall." Use the already taught gesēon + accusative actor + plain infinitive construction.

Cook VII.24.4

He that overcometh, the same shall be clothed (gescrȳdan) in white (hwīt) raiment.

Supplied help. Sē is the retained long source spelling of the nominative masculine singular demonstrative/relative. The ordinary short se remains a valid taught alternative; the added quantity is not an independent recall target.

Cook VII.24.5

These things saith he that is holy.

Supplied help. Sē is the retained long source spelling of the nominative masculine singular demonstrative/relative. The ordinary short se remains a valid taught alternative; the added quantity is not an independent recall target.

Cook VII.24.6

Fear him (ðone) that is able to destroy (fordōn) both soul and body in (on, 166) hell.

Cook VII.24.7

I am not worthy (wierðe) that thou enter under (172) my roof.

Supplied help. Uncontracted ne eom is available for "I am not." The bounded worthy-content construction uses a present subjunctive; under in the entry phrase takes an accusative roof. No negative-copula contraction is required.

Cook VII.24.8

Great is your reward in heaven (plur.).

Cook VII.24.9

If God so clothes (om. the) grass of the field, which (87. b) to-day is, and is (bið) to-morrow sent (āsęndan) into (on, 172) the oven, much (178) more he (om. shall) clothe you, O ye of little faith.

Supplied help. Supply micle, instrumental neuter singular used adverbially before mā, for "much more." Recognition of that cell elsewhere does not establish independent productive recall here.

Supplied help. Tō-morgen means "tomorrow" and is supplied as one invariant temporal expression.

Supplied help. The address "you of little faith" is locally supplied as gē lȳtles gelēafan. Lȳtles gelēafan is the bounded genitive quality expression; no general productive rule is inferred.

Cook VII.24.10

Better is the soul than food (męte), and the body than its raiment.

Cook VII.24.11

Behold (behealdan) the birds of heaven; your heavenly Father feedeth (fēdan) them.

Cook VII.24.12

What shall (sculon) we eat, or what drink?

Cook VII.25

Items 1–12. In 25.7, "verb last" applies to the relative translating "that which I command you": place its verb bebēode last in that relative. The surrounding conditional clause need not be forced into a universal dependent-clause pattern.

Cook VII.25.1

He that (sē ðe) loveth not his brother, whom (87. b) he seeth, how can (mugan) he love God, whom he seeth not?
Supplied help. Sē is the retained long source spelling of the nominative masculine singular demonstrative/relative. The ordinary short se remains a valid taught alternative; the added quantity is not an independent recall target.

Cook VII.25.2

The time of my departure is nigh at hand.

Cook VII.25.3

He did something (hwæthwega) of this sort, while his companions were going to town (burg).

Supplied help. Hwæthwega means "something" and takes the supplied partitive expression swilces, "of this kind." The reading's different exact hwæthwugu spelling remains separately recorded.

Cook VII.25.4

Be with the brethren.

Cook VII.25.5

Open the windows of the house.

Cook VII.25.6

Love (plur.) your enemies, do (om. to) them well that hate you, that ye (om. may) be (196. f) children of your Father, which (87. b) is in heaven (plur.).
Supplied help. Sē is the retained long source spelling of the nominative masculine singular demonstrative/relative. The ordinary short se remains a valid taught alternative; the added quantity is not an independent recall target.

Cook VII.25.7

Ye are my friends, if ye do (ind.) the things which (87. d) I command (bebēodan) you (verb last).

Cook VII.25.8

The birds sang the sweetest song, winsome (acc.) to hear.

Cook VII.25.9

The roof of the church is very high.

Cook VII.25.10

There (ðā) was suddenly with the angel (om. a) multitude [number] of the heavenly host, praising (gen. plur.; cf. 189. 2) God, and thus saying.

Supplied help. Unordered local material: cweðendra, “of people saying”; getæl, “number/company”; hęriendra, “of people praising”; heofonlices weorodes, “of a heavenly host”; sęmninga, “suddenly.” The genitive plural participles are substantival and supported in this collective-number formula. Identify their functions with this help; do not independently derive a participle paradigm.

Cook VII.25.11

To God be (193) glory (wuldor) in (om. the) heights, and on earth peace (om. to) men of good will.

Supplied help. Unordered local material: Gode, dative recipient; gōdes willan, the bounded quality expression “of good will”; hēanessum, dative plural “heights”; sibb, nominative “peace”; sīe, optative “be”; wuldor, nominative “glory.” Supply the complete doxological construction: dative recipient with nominative glory, and an understood parallel wish of peace for the men described. This formula does not establish unrestricted genitive-quality syntax.

Cook VII.25.12

He returned (ęfthweorfan) (om. by) the same way that he had come (see ǣr, adv.).

11. The bishop and the monk

This connected account is new teaching material. It prepares the clause patterns and references of the source reading without claiming to retell the historical episode.

> Se bisceop sæt on ðǣm hūse, and se munuc wæs ðǣr. Đā se munuc ðone sang hīerde, ðā ēode hē tō ðǣm bisceope. Se munuc cwæð: “Ic hīerde ðone sang, ðe swīðe wynsum wæs. Hīerdest ðū hine?” Se bisceop cwæð: “Gā nū, and lǣd ðā brōðor hider.” Đā ēode se munuc tō ðǣre cirican, and cōm ęft mid ðǣm brōðrum. Se bisceop geseah hīe and cwæð: “Gē sindon mīne frīend. Ic wille mid ēow sprecan.” Se munuc sæt mid ðǣm brōðrum, and hīe hīerdon ðæs bisceopes word.

R01

Translate the complete new account, The bishop and the monk. Preserve the inquiry, command and final speech.

R02

Identify the referents of hē after ēode, hine in the monk's question, hīe after geseah, and Ic and ēow in the bishop's final speech. Explain why hine need not refer to a man.

R03

Find the temporal clause and its main clause, the relative clause, and a coordinated finite verb with an unexpressed repeated subject. Give each finite verb and recover each subject.

R04

Give the narrative order of hearing the song, the monk's inquiry, the bishop's command, the monk's return and the bishop's final speech. Who is present at the end, and which words establish this?

12. The Passing of Chad: the music and summons

English context

Owini had left a court household to live and work at Chad's monastery. While the other brothers studied inside, he did needed work outside. Chad was alone in the local oratory; the companions had gone to the community church.

This orientation is new teaching material based on the preceding passage. The two buildings must be distinguished; see original note 152.5. The extract ends with Chad's summons to the brothers and Owini.

Old English text

Cook, printed pages 152–153, editorial lines 152.3–153.9, ending partway through the last line. The complete original notes and their attachment points follow in §13. Numbers in the local helps below identify explanations, not extra words in the source.

Đā hē ðā sume dæge hwæthwugu swilces ūte dyde, and his gefēran tō byrig tō ciricean ēodon, swā hīe gelōmlice dydon, and se bisceop, āna in ðære ciricean, oððe in bēcrædinge oððe in gebedum geornfull wæs, ðā gehīerde hē sęmninga, swā-swā hē ęft æfter ðon sægde, ðā swētestan stefne and ðā fægerestan, singendra and blissiendra, of heofonum oð eorðan āstīgan. Đā stefne and ðone sang hē cwæð ðæt hē ærest gehīerde fram ēastsūðdæle heofones, ðæt is fram hēanesse ðære winterlican sunnan ūpganges; and ðanan tō him styccemælum nēalæcton, oð-ðæt hē becōm tō ðæcean ðære ciricean ðe se bisceop in wæs; and, ingangende, eall gefylde, and in ymbhwyrfte ymbsealde. And hē ðā geornlice his mōd āðęnede in ðā ðing ðe hē gehīerde. Đā gehīerde hē ęft swā-swā healfre tīde fæce, of hrōfe ðære ilcan ciricean ūpāstīgan ðone ilcan blissesang, and, ðȳ ilcan wege ðe hē ær cōm, ūp oð heofonas mid unaseċgendre swētnesse ęfthweorfan. Đā wunode hē ðær sum fæc tīde, wundriende and wafiende; and mid behygdigum mōde ðōhte and smēade hwæt ðā ðing bēon sceolden. Đā ontȳnde se bisceop ðæt ēagðȳrel ðære ciricean, and mid his handa slōg tācen, swā-swā his gewuna wæs gif hwilc mann ūte wære, ðæt hē in tō him ēode. Đā ēode hē sōna in tō him. Cwæð hē, se bisceop, him tō: “Gang hraðe tō ciricean, and hāt ūre seofon brōðor hider tō mē cuman; and ðū ēac swilce mid wes.”

Local reading help

All eighteen helps remain available for translation and analysis. They supply exact source forms and bounded constructions; they do not add full paradigms for every word in the extract.

Reading help 1 — sume dæge; hwæthwugu swilces; ūte. Sume dæge is a time expression, “one day”; sume is the instrumental form. Hwæthwugu means “something”; swilces is neuter genitive, “of this kind.” Ūte means “outside.”

Reading help 2 — ciricean. Ciricean is the source genitive or dative spelling corresponding to productive cirican: genitive when dependent on roof or window, dative after tō or locative in. The same noun can name either the community church or Chad’s oratory; context and Cook’s note distinguish the buildings.

Reading help 3 — gelōmlice; āna; in bēcrǣdinge / in gebedum geornfull. Gelōmlice means "often"; āna, "alone." Bēcrǣdinge means "reading books"; gebedum is dative plural, "prayers"; geornfull here means "occupied" or "intent." In governs the dative in these expressions.

Reading help 4 — gehīerde; sęmninga; swā-swā; ęft æfter ðon. Gehīerde is prefixed "heard." Sęmninga means "suddenly"; swā-swā, "just as"; ęft, "again" or "afterwards" as the context requires. Æfter ðon means "after that"; ðon is the source dative demonstrative variant.

Reading help 5 — swētestan / fægerestan stefne; singendra and blissiendra; oð; āstīgan. Stefne is accusative feminine singular, "voice." Fægerestan means "most beautiful," agreeing with stefne. Singendra and blissiendra are genitive plural participles used substantivally, "of people singing and rejoicing." Oð means "as far as." Āstīgan here means "descend."

Reading help 6 — Đā stefne and ðone sang … gehīerde. The initial accusative objects belong with the later gehīerde inside the reported clause. Cwæð introduces the report. Ǣrest means "first." Do not turn the fronted accusatives into subjects.

Reading help 7 — ēastsūðdæle; hēanesse; winterlican sunnan ūpganges; ðanan. Ēastsūðdæle means "southeastern part"; hēanesse, "height"; winterlican, "winter," agrees with genitive sunnan; ūpganges means "rising." Đanan means "from there."

Reading help 8 — styccemælum; nēalǣcton; oð-ðæt hē becōm. Styccemælum means "little by little." Nēalǣcton is third plural: the voice and song approached. Oð-ðæt means "until." Becōm means "arrived"; the following singular reference is explained by Cook's note 9a.

Reading help 9 — ðæcean … ðe … in. Đæcean is dative singular, "roof." The relative ðe is governed by the later in, "in which"; the preposition follows its relative.

Reading help 10 — ingangende; eall; in ymbhwyrfte ymbsealde. Ingangende is a present participle, "entering." Eall is accusative neuter singular, "everything." Gefylde means "filled." In ymbhwyrfte means "all around"; ymbsealde means "surrounded." These continue the description of the song.

Reading help 11 — geornlice; his mōd āðęnede in …. Geornlice means "attentively." Mōd is "mind"; āðęnede is "directed/stretched." The whole attention expression means to direct one's mind or attention to something; in has the accusative here.

Reading help 12 — ęft swā-swā healfre tīde fæce. Here swā-swā means "about," not "just as." Healfre tīde is genitive, "of half an hour"; fæce is dative of the interval after which the event occurs. The hour sense of tīde is supplied separately.

Reading help 13 — ūpāstīgan; blissesang; ðȳ ilcan wege; unasęcgendre swētnesse; ęfthweorfan. Ūpāstīgan means "rise up"; blissesang, "song of joy." Ðȳ ilcan wege is the supported route expression, "by the same way"; ær means "previously." Unasęcgendre swētnesse means "with indescribable sweetness" after mid. Ęfthweorfan means "return." The two infinitives depend on heard.

Reading help 14 — wunode; sum fæc tīde; wundriende and wafiende. Wunode means "remained"; ðær, "there." Sum fæc tīde is an accusative duration expression, "for a while." Wundriende and wafiende are uninflected participles describing the observer as wondering and amazed.

Reading help 15 — mid behygdigum mōde; ðōhte and smēade; hwæt … bēon sceolden. Behygdigum mōde means "with an attentive mind." Ðōhte and smēade mean "thought" and "pondered." The embedded question asks what the things might be or mean; sceolden is preterite subjunctive plural, with infinitive bēon.

Reading help 16 — ontȳnde; ēagðȳrel; handa; slōg tācen; swā-swā; gewuna. Ontȳnde means "opened." Handa is the source dative form of hand. Slōg tācen means "made a signal," literally "struck a sign." Swā-swā means "just as." Gewuna means "custom" or "habit."

Reading help 17 — gif hwilc mann … wære; ðæt … ēode; in; sōna. Hwilc mann here means "anyone." Wære is preterite subjunctive in the habitual condition. The ðæt clause states the content or purpose of the signal. In is the adverb "in"; sōna means "immediately."

Reading help 18 — Cwæð … him tō; Gang; hāt; ēac swilce mid wes. The separated him … tō identifies the person addressed. Gang means "go" (singular imperative); hraðe, "quickly." Hāt is singular "command/tell," with an accusative subject and infinitive. Hider means "hither/here." Ēac swilce means "also"; mid is adverbial "with them"; wes is singular "be."

Source-reading tasks

S01

Translate the complete music-and-summons extract from The Passing of Chad. Use all printed local helps and original notes.

S02

Divide the opening sentence through of heofonum oð eorðan āstīgan into its major clauses. Identify the subjects of dyde, ēodon, dydon, wæs, gehīerde and the parenthetical sægde; distinguish the first two occurrences of ðā and the main-clause ðā before gehīerde.

S03

Follow the sound through the account. Identify what hē refers to in hē becōm and in ðe hē ǣr cōm; describe its path using the printed vocabulary help.

S04

Identify Owini's actions and Chad's actions from the arrival of the sound until the command to fetch the brothers. Where does se bisceop make a reference explicit?

S05

In ðe se bisceop in wæs, give the antecedent and explain the role of in using the local help. Translate the complete noun phrase and relative clause.

S06

In Ðā stefne and ðone sang hē cwæð ðæt hē ǣrest gehīerde, identify the two fronted objects and the verb that governs them. Use Cook's note 8 and the local help. Show the reporting clause and its content clause without assuming that the fronted objects belong to cwæð.

S07

In Chad's final speech, identify the speaker, the addressee, and the referents of ūre, mē and ðū. Which brothers are to come, and is Owini included? Cite the wording and the original note distinguishing the churches.

S08

Choose one main clause and one dependent clause in the extract. Identify their finite verbs, subjects and first constituents. Explain how their actual order relates to the chapter's tendencies; do not rewrite the source into a compulsory pattern.

13. Cook's original notes and attachments

The following notes preserve Cook's wording and original numbering. References such as 176 are to sections of Cook's grammar. His questions about later English words remain source apparatus; they are not additional assessed tasks in this unit. The local helps in §12 supply what is needed to read the extract.

Original note	Attached word	Editorial line
152.3	sume	152.3
152.3	dæge	152.3
152.4	swilces	152.3
152.5	ciricean	152.5
152.6	stefne	152.8
152.7	blissiendra	152.8
152.8	stefne	152.9
152.8	sang	152.10
152.9	styccemælum	152.12
152.9a	hē	152.13
152.10	ðæcean	152.13
152.11	ðe	152.13
152.12	eall	152.14
152.13	mōd	152.15
152.13	āðęnede	152.16
152.14	swā-swā	152.17
152.15	fæce	152.17

152.19	ęfthweorfan	152.20
153.1	sum	153.1
153.1	fæc	153.1
153.1	tīde	153.1
153.2	ēagðȳrel	153.4
153.3	tō	153.7
153.4	ciricean	153.7
153.5	hāt	153.8
153.6	wes	153.9

152.3

See 176.

152.4

See 154. b.

152.5

Lat. oratorio loci. The monks had gone to the church. Cf. below, p. 153, l. 7.

152.6

See 169. For this word see Chaucer, Knight's Tale 1704.

152.7

Lat. vocem suavissimam cantantium atque lætantium. What adjective is concealed in bliss- (see 34)?

152.8

Acc. after gehīerde.

152.9

See 72.

152.9a

Se sang.

152.10

Lat. tectum, for which l. 17 has hrōf.

152.11

Governed by in.

152.12

Acc. sing.

152.13

Lat. animum intenderet.

152.14

Lat. quasi.

152.15

See 176.

152.16

Lat. lætitiæ canticum. See 169.

152.17

See 176. 2.

152.18

Lat. ineffabili.

152.19

Lat. reverti.

153.1

Lat. aliquantulum horæ (170).

153.2

In what Mod. Eng. word is a disguised form of -ðȳrel to be found? What is the etymology of window?

153.3

See 201. 1.

153.4

What is the etymology of church? From what language is it originally derived?

153.5

See hātan.

153.6

Imper. sing. When followed by the adj. hāl, what Mod. Eng. word does it give rise to?

14. Editorial and source notes

Editions and locators. The source grammar and reading are Albert S. Cook, A First Book in Old English, second edition (1895). The exercise prompts are Cook's Exercises in Old English, Group VII, Exercises 22–25, printed pages 11–13 (PDF pages 19–21). The Chad extract is on printed pages 152–153 of the First Book (PDF pages 168–169). Editorial line counts start at the first text line on each printed page; Cook's marginal five-line numerals remain distinct from this counting convention.

The two order fragments. Æfter ðon hē underðēodde is exact source wording from printed page 153, editorial line 16, outside the continuous extract; Cook's note 13 glosses the last verb with Latin subjunxit. The dependent-clause fragment is already part of the assigned extract on page 152. Its English brackets supply the objects identified by Cook's original note 8. The general treatment of order follows the qualified tendencies described by R. D. Fulk, An Introductory Grammar of Old English, §78. Neither source supports an exceptionless finite-second or dependent-final rule.

Forms and derivation. The noun and adjective models follow Cook §§43–63; verbal systems follow the strong, weak and anomalous paradigms on printed pages 54–80 and the lexical entries for the individual verbs. The full kinship systems are also checked against Joseph Wright, Old English Grammar, §415. Wright §259.3 supplies the consonant simplification in swētra; the selected rule-derived genitive plural is not presented as an independently attested quotation. Forceorfan's selected present forcierf- is a declared Cook-style normalization of dictionary cirf/cyrf variants. The movement, proximity and clothing constructions are checked against the corresponding Bosworth–Toller entries, including beforan, wið, under and gescrȳdan.

Source typography. The continuous reading joins source line and page breaks, removes purely typographic word breaks, and represents original note cues through the attachment table. No word has been added to complete its sense. Original quantities, e/ę, ð and source variants such as ciricean, hwæthwugu and Gang are retained. Dictionary separators in joined learner headwords, including the compound nouns and adjectives, do not change their letters or vowel quantities. Wright's thorn is represented by Cook-style eth in the derived kinship paradigms. These are declared presentation choices, not silent changes to the source reading.

C03: Cook 23.7. The original prompt's reference "forceorfan, 134" is retained. Section 134 of the selected First Book does not supply the forceorfan paradigm required here. Use the complete indicative table and the printed principal-part support in this unit; the original reference is not a prerequisite. No cause is assigned to the discrepancy.

Exercise controls and variants. Cook's directions choose targets within the language. The long sē and genitive plural ðǣra are supplied where needed; ordinary se and ðāra remain the familiar forms. The English "in white raiment" is rendered through the taught mid-with-dative clothing construction. Static dative interpretations of "before" or "in his hand" can be defensible even where a task selects a different construction. Such alternatives must be judged separately from compliance with the selected target.
