ANSWER KEY

Old English

A grammar-led course

Cook / Lambdin-style course

November 2026

About this volume

This volume contains the complete pronunciation practice key followed by the keys to Units 1–18. Answers follow the same unit order as the Learner's Book and retain the exercise and item labels used there.

Models, required targets, defensible alternatives and explanations remain separate where the original keys distinguish them. A valid alternative need not match a model word for word; a stated exercise target still governs the task.

The contents gives the starting page of each key. Section numbers remain local to their unit. References to Cook's printed pages and scans retain their source locators.

SEPARATE KEY

Pronunciation practice: key

These answers follow the guide's chosen reading convention. The English words identify particular sounds; they are not replacement spellings for whole Old English words. The permitted American **r** and practical short-vowel approximations are acceptable. Different scholarly reconstructions do not make all sound choices interchangeable within these exercises.

A. Length contrasts

A1. ac, "but"; āc, "oak". Ā in **āc** is long. Both vowels have the *father* quality; hold the second longer. Both final consonants are **k**. Do not replace **ā** with the English letter name **a**.

A2. is, "is"; īs, "ice". Ī in **īs** is long. Use *bit* for short **i**, held *see* for long **ī**. The selected practical vowels differ in quality as well as length. Both words end in unvoiced **s**, as in *sip*; modern English *is* does not determine Old English voicing.

A3. god, "god"; gōd, "good". Ō in **gōd** is long. The vowel of **god** is short and rounded, as described in the guide; **gōd** has the steady initial vowel of *go*, held without the glide. Retain hard **g** in both. Do not copy the vowels of the modern English glosses.

A4. full, "full"; fūl, "vile". Ū in **fūl** is long, with the *food* quality; **full** has short *foot*-type **u**. The target is this vowel-length and vowel-quality contrast. Both final **l** sounds have ordinary single-consonant duration; the written **ll** of **full** does not require extra holding.

B. Consonants and unfamiliar sounds

B1. cuman, "come". C is **k**, as in *kit*. It is a stopped sound, without the **ch** beginning heard in *chin*. The English gloss illustrates the initial consonant, not the whole Old English word.

B2. cyrice, "church". Both **c** letters have the **ch** sound of *chin*. Keep three syllables and the light final **e**. Short **y** remains the rounded-front vowel taught in the guide; the modern English gloss is not a complete pronunciation model.

B3. cēlan, "cool". C is **k**. This is a supplied exception to the front-vowel tendency. The following **ē** does not authorize changing it to **ch**.

B4. giefan, "give". Initial **g** is consonant **y**, as in *yes*. The following **ie** is the taught single-syllable glide beginning with the *see* vowel. Neither hard **g** nor the sound of English **j** is the requested initial sound.

B5. fugol, "bird". G is continuous and voiced: bring the back of the tongue near the hard-**g** position, leave a gap, and sustain the airflow with throat vibration. A complete closure would give a hard stop; omitting the sound would lose a consonant.

B6. scip, "ship". Sc is the single **sh** sound of *ship*. Do not pronounce separate **s** and **k** here. That separate pair belongs to the supplied exception **frosc**, "frog".

B7. niht, "night". Use the front, unvoiced continuous **h** sound: raise the middle of the tongue toward the roof of the mouth and let breath pass through the gap. Both **h** and **t** are audible. The modern gloss does not license a silent **h** or a long vowel.

B8. wyrt, "herb; plant". Y is a short rounded-front vowel. Keep the tongue position of *bit* while rounding the lips as for **oo** in *food*. Do not pull the tongue back into an ordinary **oo** sound or make the consonant **y** of *yes*.

C. Voice

C1. cnīf, "knife". Final **f** is unvoiced, as in *fan*. The preceding vowel does not voice a word-final **f** under this guide's rule. The initial **c** is also sounded, as **k**.

C2. cnīfas, "knives". F is voiced, as in *van*, between **ī** and **a**. This is the same written letter as in **cnīf**, now in a different sound environment. The final **s** remains unvoiced.

C3. rīsan, "rise". S is voiced, as in *zip*, because it stands between voiced vowels. Its spelling does not require the unvoiced sound of *sip* in this position.

C4. hūs, "house". Final **s** is unvoiced, as in *sip*. It remains unvoiced despite the preceding vowel. A voiced **z** is not the selected word-final reading.

C5. ōðer, "other". Ð is voiced, as in *this*, between vowels. The sound follows its environment here, not a distinction between the letters **ð** and **þ**.

C6. hælðu, "health". Ð is unvoiced, as in *thin*. Although **l** and **u** carry voice, this word is an explicitly supplied exception. Applying the ordinary surrounding-sounds rule without its stated limits would give the wrong target.

D. Syllables and stress

D1. habban, "have". Two syllables; stress the first. **Bb** is prolonged: hold the lip closure before releasing into the second syllable. There is no extra vowel or third syllable between the two written consonants.

D2. fugol, "bird". Two syllables; stress the first. There is no doubled consonant. Keep the second vowel audible and the medial **g** continuous and voiced; dropping the unstressed **o** is not the requested careful reading.

D3. heofonan, "heaven". Three syllables; stress the first. There is no doubled consonant. **Eo** forms one glide, followed by syllables containing **o** and **a**. Keep both unstressed vowels audible; copying the two syllables of modern *heaven* would lose a syllable.

D4. gescēop, "created". Two syllables; stress the second, **scēop**. There is no doubled consonant. The prefix **ge-** is unstressed; long **ēo** remains one vowel glide within the stressed syllable. Two vowel letters do not create two syllables there.

E. A sentence adapted from Cook

The supplied meaning is "God created heaven and earth." No independent translation is tested.

E1. gescēop, "created". G has the sound of **y** in *yes*; **sc** has **sh**. The prefix contains a light **e**; the stressed second syllable contains long **ēo**, moving from a held, steady *day*-type vowel toward **oo**. Keep the prefix vowel: **g** and **sc** are not adjacent sounds with no vowel between them.

E2. heofonan, "heaven". F is voiced, as in *van*, between the **eo** glide and the following **o**, both voiced vowels. Keep three syllables, with stress on the first. The rule depends on surrounding sounds, not on the modern English spelling of the gloss.

E3. eorðan, "earth". Ð is voiced, as in *this*, between voiced **r** and **a**. The rule is "between voiced sounds", not only "between vowels". Keep the initial **eo** glide and the second syllable; the single-syllable English gloss is not a pronunciation model.

UNIT 1

Answer key

Reading the models

The models use the forms selected in the lesson. A different grammatical answer may still convey the required meaning. Distinguish a mistake in Old English from failure to practise an explicitly requested form or word. In the supplied frames, the verb is given: assessment concerns the noun phrases and their cases, not recall of a verb paradigm.

For isolated Cook phrases, the head is nominative. Preserve singular and plural even where English treats the referent differently. Each article agrees with its own noun. A nominative/accusative form that happens to be identical is not evidence that the two syntactic roles are interchangeable.

The source permits **ðām** beside **ðæm**, **ðæra** beside **ðāra**, and **sind/sint** beside **sindon**. Likewise, **fugolas/morgenas** and other appropriate unsyncopated forms, shorter **wætru**, bare singular **trēow**, strong feminine N/A plural **-e**, and singular oblique **-a** of the **-ung** group can be valid. When a task explicitly asks for the selected table, identify such an answer as an alternative rather than the requested model. Retain grammatical agreement throughout.

The selected **æfen** and **lyft** are neuter, and **sæ** is masculine. Other evidenced genders are not intrinsically erroneous, but changing gender requires a consistent paradigm and agreement and does not meet a direction to use the selected form. Similarly, **nīeten** is a valid animal word, while the directions here choose **dēor** for “animal/beast” and **nīeten** for “cattle.” **Wæstm** has short **æ**; neither the erroneous printed macron in Cook nor **a** in its plural is the target. The starred ***sæwa** is never required.

11. Forms and agreement

1. **Fisc with the article:**

Case	Singular	Plural
Nominative	se fisc	ðā fiscas
Genitive	ðæs fisces	ðāra fisca
Dative	ðǣm fisce	ðǣm fiscum
Accusative	ðone fisc	ðā fiscas

The target is the complete masculine paradigm with agreement. Singular nominative and accusative **fisc** coincide, but **se/ðone** distinguish them. Plural **-as** belongs to N/A, not to the genitive or dative.

2. N/A plural **hofu; sǣd**. The short stem **hof-** takes **-u**; the long vowel of **sǣd** makes its stem heavy, so N/A plural adds no ending. Both cases have the same form within each neuter number. This is the stated ordinary pattern, not a rule to impose on **trēo** or the disyllabic nouns.
3. **Daga; hwala; męnn; nihta**, respectively. The first two use the plural **a** stem and genitive plural **-a**. **Męnn** is the exceptional dative singular of **mann**. **Nihta** is genitive plural even though the N/A plural **niht** has no ending.
4. **Trēowes, trēowe, trēowu; tācnes, tācnu; wæteres, wæteru; æfenu, nīetenu.** Every ending of **trēo** follows **w**. **Tācen** loses its middle **e**; the selected forms of the other three disyllables retain theirs. Dropping **-u** solely because the stem contains a long vowel misapplies the ordinary monosyllabic rule.
5. **Steorra** and the singular of **eorðe**:

Case	steorra singular	steorra plural	eorðe singular
Nominative	steorra	steorran	eorðe
Genitive	steorran	steorrena	eorðan
Dative	steorran	steorrum	eorðan
Accusative	steorran	steorran	eorðan

The target is weak inflection: do not replace weak genitive singular **-an** with strong masculine **-es**. Plural genitive **-ena** and dative **-um** remain distinct from **-an**.

6. **Wyrt, wyrte; tīd, tīde; gesceafte.** The order is accusative then genitive for the first two nouns. Their selected accusatives have no **-e**; the ordinary strong feminine accusative **gesceafte** does. A single feminine rule without these lexical exceptions is insufficient.

7. **Fæstnesse; andlīcnessa; gelīcnessa; gegaderungum.** Retain **e** and double **s** before the **-nes** nouns' endings. Genitive and nominative plural can share **-a**; identify the requested case from the task, not the ending alone.
8. **Ðȳ** and **ðon** are instrumental singular forms, both masculine and neuter. The feminine and plural have no separate instrumental forms in this table. Recognizing the cells is sufficient; no instrumental construction is being tested.

The copula

1. First person singular: **eom / wæs** — present / preterite.
2. Second person singular: **eart / wǣre** — present / preterite.
3. Third person singular: **is / wæs** — present / preterite.
4. First person plural: **sindon / wǣron** — present / preterite.
5. Second person plural: **sindon / wǣron** — present / preterite.
6. Third person plural: **sindon / wǣron** — present / preterite.

The forms are indicative. **Wǣre** is required for second-person singular preterite in this paradigm; **wæs** serves first and third singular. Each plural person has **sindon / wǣron**. Different persons may share a form without ceasing to be separate paradigm cells.

12. Case in sentences

The following preserve the order of the printed frames. Other word orders can be grammatical, but changing the frame is not needed. An English "in" phrase has the location specified in the prompt; no motion construction is intended.

1. **Se mann geseah ðone fugol.** — The man saw the bird. Subject se mann is nominative; object ðone fugol is accusative. Both noun spellings themselves could serve either case.
2. **Se fugol geseah ðone mann.** — The bird saw the man. The roles are reversed from item 1. Change the articles with the roles; do not merely reverse the English gloss.
3. **God gescēop ðā heofonas and ðā eorðan.** — God created the heavens and the earth. The coordinated objects are masculine accusative plural and feminine accusative singular. Their articles coincide as ðā. This task explicitly asks for masculine heofon, unlike the source reading's supplied weak singular heofonan.

4. **Se mann geseah ðā steorran.** — The man saw the stars. Steorran is weak accusative plural here; ðā agrees with the plural object, not with the singular subject.
5. **Se mann geseah ðone fisc on ðǣm sǣ.** — The man saw the fish in the sea. The fish is accusative; sǣ is masculine dative singular after locative on. Sea singular nominative and dative happen to coincide.
6. **God gedǣlde ðæt lēoht fram ðǣm ðīestrum.** — God separated the light from the darkness. Light is the accusative object; darkness is dative plural after fram. This adapts the reading by using God in place of hē and omitting introductory and.
7. **Se fugol geseah ðæt sǣd on ðæs mannes hofe.** — The bird saw the seed in the man's dwelling. Seed is accusative; hofe is dative after on. The internal dependent ðæs mannes remains genitive.
8. **Se fugol geseah ðone mann on ðǣm hofe.** — The bird saw the man in the dwelling. Mann is accusative; hofe is dative singular. Here the article belongs directly to hofe, unlike item 7.
9. **God sealde ðǣm męnn męte.** — God gave food to the man. The recipient ðǣm męnn is dative singular, with the changed-vowel mann form; the thing given, męte, is accusative singular. No preposition is required for the recipient.
10. **Se mann sealde ðǣm fugle sǣd.** — The man gave seed to the bird. Se mann is nominative, ðǣm fugle dative recipient, and sǣd accusative thing given. Bird dative singular is fugle, not fugol or fuglas.

13. Cook's noun-phrase exercises

Group I, Exercise 1

All heads are nominative. The English gloss states the essential meaning; the accompanying note identifies the principal target or a likely error.

1. **Đæt æfen and se morgen.** — The evening and the morning. Neuter evening contrasts with masculine morning; both are singular.
2. **Se dæg and sēo niht.** — The day and the night. The article distinguishes masculine day and feminine night.
3. **Sēo eorðe and se heofon.** — The earth and the heaven. Use weak feminine eorðe and the selected strong masculine heofon.
4. **Se fisc and se fugol.** — The fish and the bird. Both heads are masculine nominative singular.
5. **Đæt gærs and ðæt sæd.** — The grass and the seed. Both are neuter. Retain the source spelling gærs.
6. **Đæt trēo and sēo wyrt.** — The tree and the herb. The tree is neuter, the herb feminine; trēo is the bare singular.
7. **Sēo drȳgnes and ðæt wæter.** — The dry land and the water. Dry land is feminine drȳgnes; water is neuter. No ending is added to either nominative.
8. **Sēo andlīcnes and sēo gelīcnes.** — The image and the likeness. Both are feminine; the doubled s belongs to their inflected stems, not these nominatives.
9. **Đæt lēoht and ðā ðīestru.** — The light and the darkness (plur.). The light is singular; darkness is explicitly plural, so its article is ðā.
10. **Đæt tācen and sēo tīd.** — The sign and the season. The sign is neuter; the season is feminine. Tācen retains its e in the bare singular.
11. **Se gāst and ðæt līf.** — The spirit and the life. Masculine spirit contrasts with neuter life.
12. **Sēo gesceaft and se męte.** — The creature and the food. The selected creature is feminine, food masculine; preserve hooked ę.
13. **Đæt gēar and se dæg.** — The year and the day. Year is neuter, day masculine. The dæg stem changes only in the plural.
14. **Se mann and ðæt dēor.** — The man and the animal. The selected animal is neuter dēor; singular mann has no vowel change.
15. **Đæt trēo and se wæstm.** — The tree and the fruit. Fruit is masculine wæstm, with short æ. The tree is singular.
16. **Sēo fæstnes and sēo nēowolnes.** — The firmament and the abyss. Both are feminine nominatives in -nes; the assigned senses are firmament and abyss.

Group I, Exercise 2

All noun phrases are plural. In particular, zero-ending neuters and **niht** must not be made singular simply because their spelling is unchanged. The plural article **ðā** is common to every gender.

1. **Ðā dagas and ðā niht.** — The days and the nights. Dæg has plural a; niht has an endingless N/A plural.
2. **Ðā fiscas and ðā fuglas.** — The fishes and the birds. Both have masculine plural -as; fugol uses the selected syncopated stem fugl-.
3. **Ðā trēowu and ðā wyrta.** — The trees and the herbs. Trēowu is the exceptional neuter plural; wyrta is feminine N/A plural.
4. **Ðā andlīcnessa and ðā gelīcnessa.** — The images and the likenesses. Both -nes nouns have -nessa. Single s before -a misses the selected stem.
5. **Ðā tācnu and ðā tīda.** — The signs and the seasons. Tācen loses e before the plural ending; tīd takes the selected feminine -a.
6. **Ðā gēar and ðā dagas.** — The years and the days. Gēar has zero N/A plural, while dæg changes its vowel and takes -as.
7. **Ðā męnn and ðā dēor.** — The men and the animals. Męnn is the changed-vowel plural; dēor has no N/A plural ending.
8. **Ðā sæs and ðā heofonas.** — The seas and the heavens. Sæs is the irregular sea plural; heofonas retains the middle vowel.
9. **Ðā sæd and ðā wæstmas.** — The seeds and the fruits. Neuter seeds have zero ending; masculine fruits take -as without changing æ.
10. **Ðā æfenu and ðā morgnas.** — The evenings and the mornings. The selected neuter æfenu retains e; selected morgnas loses it. Morgenas is also valid.
11. **Ðā gāstas and ðā męnn.** — The spirits and the men. Gāst has regular -as; mann requires męnn, not an -as plural.
12. **Ðā hwalas and ðā nīetenu.** — The whales and the cattle. Hwæl changes æ to a; nīetenu retains the middle e and supplies the assigned cattle sense.

Group I, Exercise 3

The selected target is **genitive dependent + nominative head**, with no separate article on the head. The article of the dependent remains. This is Cook's preferred pattern for this exercise, not a ban on every other grammatical genitive order. Proper **Godes** has no article. A plural head and a plural dependent are independent choices: one does not force the other to be plural.

1. **Đæs dæges anginn.** — The beginning of the day. Day is genitive singular; beginning is the neuter nominative head.
2. **Godes gāst.** — The spirit of God. The proper divine name has genitive Godes without an article; gāst is nominative.
3. **Đæs līfes lēoht.** — The light of the life. Life is genitive singular. Its article is retained, while the head light has none of its own.
4. **Đæs fugles līf.** — The life of the bird. Fugles is the selected singular genitive with syncope; līf is the nominative head.
5. **Đæs fisces męte.** — The food of the fish. Fish is genitive singular; food is nominative męte, not a second genitive.
6. **Đæs heofones fæstnes.** — The firmament of the heaven. Heofones retains its e. The head fæstnes is nominative, without -e.
7. **Đære eorðan dēor.** — The beasts of the earth. Earth is singular genitive; beasts are plural dēor, though the head has no plural ending.
8. **Đære nēowolnesse brādnes.** — The face of the deep. The deep is genitive singular; brādnes is the nominative head, meaning surface/face here, not a human face.
9. **Đāra wætera gegaderunga.** — The congregations of the waters. Both waters and gatherings are plural: genitive wætera and nominative gegaderunga.
10. **Đæs sǣs wæteru.** — The waters of the sea. The sea is singular genitive sǣs; waters are nominative plural wæteru. No sea genitive plural is needed.
11. **Đæs sǣs fiscas.** — The fishes of the sea. Sea remains genitive singular, while fishes is the masculine nominative plural.
12. **Đæs lyftes fuglas.** — The birds of the air. Use the selected neuter air, hence ðæs lyftes; birds are plural fuglas.
13. **Đāra heofona and ðære eorðan frætwung.** — The array of the heavens and of the earth. Two coordinated genitives modify one singular head: heavens plural, earth singular. Each dependent keeps its own article.
14. **Godes weorc.** — The works of God. Godes is singular; weorc is nominative plural, with no added ending.
15. **Đāra dēora cynn.** — The kinds of the animals. The animals are genitive plural; the kinds are nominative plural cynn, again with no added ending.
16. **Đæs heofones steorran.** — The stars of the heaven. Heaven is singular genitive; stars are weak masculine nominative plural -an.
17. **Đæs gærses sǣd.** — The seeds of the grass. Grass is singular genitive. Seeds are plural sǣd, despite the unchanged spelling.

18. **Đāra nihta līehting.** — The illumination of the nights. Nights are genitive plural nihta; illumination is the feminine nominative singular head. Retain the macron of līehting.

14. Composition

1. **Se fugol is on ðǣm trēowe.** — The bird is in the tree. Singular subject takes is; trēowe is dative after locative on, with the required w.
2. **Đā fuglas wǣron on ðǣm trēowum.** — The birds were in the trees. Plural past wǣron agrees with fuglas; trēowum is dative plural.
3. **Đæt sǣd is ðæs fugles męte.** — The seed is the bird's food. Męte is a nominative noun predicate; ðæs fugles is its dependent genitive. Do not add a separate article to męte in the requested pattern.
4. **Se fisc is dēor.** — The fish is an animal. Dēor is a nominative predicate; English an needs no separate Old English word here.
5. **Đā tācnu wǣron on ðǣm heofone.** — The signs were in the sky. Tācnu is nominative plural with syncope; heofone is dative singular with retained e.
6. **Đā wyrta sindon on ðæs mannes hofe.** — The herbs are in the man's dwelling. Plural subject takes sindon. The genitive dependent does not replace the head's dative after on.
7. **Đære niht lēoht wæs on ðǣm heofone.** — The light of the night was in the sky. Niht is selected genitive singular, despite its lack of ending; ðære agrees with genitive niht here. The singular head lēoht takes wæs. Source-listed nihte is also a valid genitive alternative.
8. **Đāra dēora męte is ðāra trēowa wæstm.** — The animals' food is the fruit of the trees. Both dependents are genitive plural. Subject męte and predicate wæstm are singular nominatives, so the copula is is. Trēowa retains w, and wæstm retains short æ.

15. Short readings

1. **The man is in the dwelling. The seed is in the man's dwelling. The bird is in the tree. The seed is the bird's food.** The dwelling in the second sentence belongs to the man. **Mannes** is genitive singular, with its agreeing **ðæs**; **hofe** is dative singular, governed by locative **on**. In the last sentence, **męte** identifies the subject and is nominative, while **ðæs fugles** is its genitive dependent. "The food of the bird" conveys the same relation.

2. **The fishes were in the sea. The birds were in the trees. The trees were on the earth.** "Fish" as the English plural is equally suitable. Present: **Đā fiscas sindon on ðǣm sǣ. Đā fuglas sindon on ðǣm trēowum. Đā trēowu sindon on ðǣre eorðan.**
Trēowu is nominative plural, the subject of the third sentence; **trēowum** in the second is dative plural after **on**. **Eorðan** is dative singular after locative **on**, as its feminine singular article **ðǣre** confirms. Replacing **wǣron** with singular **is** would lose agreement.

16. The first day of Creation

1. **God** is the subject; **heofonan** and **eorðan** are the accusative objects. **Heofonan** is singular, the weak feminine form supplied in the help. **In the beginning God created heaven and earth.** The opening places the verb before its subject after **On anginne**. Do not identify **God** as an object simply from its position, or translate **heofonan** as a plural of the masculine **heofon**. English "the heaven(s) and the earth" may be idiomatic, but the grammatical analysis must retain the source's singular.
2. **The earth was empty and void; darkness was over the surface of the deep. Đīestru** is plural and therefore has plural **wǣron**, although ordinary English uses singular "darkness was." After **ofer**, the head is **brādnesse**, dative singular. Its dependent **ðǣre nēowolnesse** is genitive singular. The article belongs to the dependent. Treating every word after **ofer** as dative misses the internal structure of the phrase. "Abyss" for "deep" and "face" for "surface" are defensible.
3. **God's spirit was borne/carried over the waters**, or contextually **moved over the waters**. **Wæs geƿered** is the supplied passive expression. **Godes** is the genitive dependent of nominative **gāst**. **Wæteru** is accusative plural here; the selected dative plural would be **wæterum**. The previous **ofer + dative** does not make this phrase dative too. A translation asserting that the spirit carried some unexpressed object changes the construction.
4. The speech is a **command or wish for light to come into being**, not a report that light already exists: **"Let light come to be."** It is followed by **light was made / came into being**. "Let there be light" gives the intended force naturally. The subsequent **wearð geworht** is the supplied passive; do not change the quotation into indicative "light becomes."

5. **Đā** is temporal "then"; **ðæt** introduces the content clause, "that"; **hit** is nominative neuter singular "it," referring to **lēoht**. **God then saw that it was good.** The final **wæs** belongs to the embedded clause, whose subject is **hit**. This **ðæt** is not the article; **gōd**, "good," is not the proper name **God**.
6. God separated **the light from the darkness**. **Ðæt lēoht** is the accusative singular direct object; **fram ðǣm ðīestrum** is the separation phrase, with dative plural after **fram**. **Hē** refers to God. "Divided" is a suitable alternative to "separated." Reversing the object and the phrase loses the stated construction.
7. He named **the light Day** and **the darkness Night**. **God/he** is the understood subject of **hēt**. The ending states **one day**. The naming objects and the names applied to them are accusative. A translation may supply the understood English "he." **Ān** is cardinal "one," so "the first day" is not an exact rendering of the closing words. The supplied closing formula is sufficient; no unique analysis of its subject/predicate arrangement is required.
8. **In the beginning God created heaven and earth. Now the earth was empty and void; and darkness was over the surface of the deep; and God's spirit was borne over the waters. God then said, "Let light come to be"; and light was made. God then saw that it was good; and he separated the light from the darkness. And he called the light Day, and the darkness Night. Then there came to be evening and morning: one day.**
   The translation follows the actual Old English. "Moved" is natural for **wæs geferęd** in context; "came into being" is suitable for **wearð geworht**. In the close, "evening and morning had come to be: one day" preserves the resultative/perfect force of **wæs geworden**. The latter is a coming-to-be expression, not simply another instance of the earlier passive. The connective **sōðlice** may be rendered "now," "for its part," or by a suitable discourse connection. Preserve creation, description, movement, command, fulfillment, judgment, separation, naming, and the one-day close. A remembered translation of Genesis is not sufficient if it substitutes different grammar or wording for this extract.

17. Review

1. **Dagas, hwalas, wæstmas.** The first two nouns have **æ** in the singular and **a** in the plural. **Wæstm** retains short **æ** before its consonant group; its plural adds **-as** without that vowel change. The correction of Cook's length mark does not authorize changing the vowel to **a**. The target is controlled use of the particular stem alternation, not a universal replacement of **æ**.
2. **Hofe** is the head, dative singular after locative **on**. **Ðæs mannes** is the genitive singular dependent, "the man's." **Ðæs** agrees with **mannes**. The head's externally governed dative and the dependent's internal genitive coexist; they need not have the same case.
3. **Eorðan** can be genitive, dative, or accusative singular, or nominative/accusative plural, in the displayed weak paradigm. In **on ðære eorðan**, it is **dative singular**, with the locative preposition and feminine singular article. In **God gescēop ðā eorðan**, it is **accusative singular**: the direct-object construction establishes the case, and the supplied meaning "God created the earth" establishes the singular number. The spellings **ðā/eorðan** alone also permit **accusative plural**; they do not by themselves establish singular number. Naming the possible plural cells does not assign a new plural sense of "earth" for composition.
4. **Ðīestru** is a plural noun, so the Old English verb is plural **wǣron**; English "darkness" is ordinarily singular. In **ðæt lēoht fram ðǣm ðīestrum**, **ðæt lēoht** is accusative singular, the thing separated; **ðǣm ðīestrum** is dative plural after **fram**. Translating English number directly into the Old English verb would give the wrong agreement.

Source notes

These are new models, not a key supplied by Cook. Source prompts are Cook, *Exercises in Old English* (1895), Group I, Exercises 1–3, pp.1–2 / PDF9–10. The complete reading is *A First Book in Old English*, second edition (1895), Reader I, pp.123–124 / PDF139–140. The learner's source notes give the checked grammatical and lexical locators for the models and their alternatives. PDF references are one-based. The reading translation was prepared from the printed Old English.

UNIT 2

Answer key

Reading the models

Models use the selected spellings of the lesson. An evidence-supported alternative listed there is valid Old English; where an exercise requests the selected form, distinguish that validity from showing recall of the stated target. Different word order is acceptable when the same cases, agreement, reference and meaning remain clear. Keep the required quantity marks and **ę**.

A complete verb paradigm includes all three singular and all three plural persons in both tenses. In the compact tables below, the plural row explicitly serves all three persons; dual subjects use that row too. A preterite ending in **-e** usually has both a first- and a third-singular analysis in these paradigms. Pronouns or context determine which is meant.

Infinitive/participle columns are lookup aids, not tests of nonfinite recall or syntax. The six first-/second-person genitives and all **nabban** forms are recognition material. The source-reading help may be consulted throughout its exercises. This key is newly authored; it is not Cook's own answer key.

9. Pronoun practice

1. Nominative, dative, accusative:

Meaning	Nominative	Dative	Accusative
I / me	ic	mē	mē
you, singular	ðū	ðē	ðē

The dative may mean "to/for me" or "to/for you" in a suitable construction; here the giving construction uses it for the recipient. The repeated spellings do not make dative and accusative one case.

2. **Wit, unc, unc**, "we two/us two"; **git, inc, inc**, "you two". The nominatives take **plural** finite verbs. Retain dual reference in the pronoun; do not invent a dual verbal ending.
3. **Wē, ūs, ūs**; **gē, ēow, ēow**, in nominative–dative–accusative order. The supplied context asks for ordinary plural forms, rather than the explicitly dual forms.

4. Nominative, dative, accusative:

Gender	Nominative	Dative	Accusative
Masculine	hē	him	hine
Feminine	hēo	hiere	hīe
Neuter	hit	him	hit

Grammatical gender governs the choice. English "it" alone does not determine which row an Old English antecedent requires.

5. **Hīe, him, hīe**. No separate plural gender forms are needed. Subject and object **hīe** share their spelling; their clause roles differ.

6. **Mīn**: first singular; **ðīn**: second singular; **uncer**: first dual; **incer**: second dual; **ūre**: first plural; **ēower**: second plural. All are given genitives. This recognition answer does not require composing possessive-adjective phrases.

10. Verb forms

1. **Hīeran**, "hear":

Person and number	Present	Preterite
1 sg.	hīere	hīerde
2 sg.	hīerst	hīerdest
3 sg.	hīerð	hīerde
1–3 pl.	hīerað	hīerdon

Git hīerdon, "you two heard". The dual subject takes the second-person plural form. Present **hīerst/hīerð** and past **hīerdest/hīerde** must remain distinct.

2. **Ðū gefylst; hē gefylð; ic gefylde; wē gefyldon.** "You finish; he finishes; I finished; we finished." Bare correctly labelled verb forms also satisfy the form request. The lexical **ll** appears in **gefylle/gefyllað**, but simplifies in the selected second/third singular before **st/ð** and in the past before **d**. Do not write an extra **l** in **gefylde** or treat the verb here as "fill with a substance".

3. Present 2 singular **cyst**; present 3 singular **cyst**; preterite 2 singular **cystest**; preterite 1/2/3 plural **cyston**. The two present cells coincide; their persons do not. The full stem's **ss** is not retained in these contracted/dental combinations.

4. **Sęttan**: present 1 singular **sętte**; preterite 1 singular **sętte**; preterite all plural **sętton**. **Sęndan**: present 1 singular **sęnde**; preterite 1 singular **sęnde**; preterite all plural **sęndon**. The identical singular forms need different tense labels. Neither past takes another written dental.
5. **Lædan**: present 2 singular **lætst**; present 3 singular **lætt**; preterite 2 singular **læddest**. **Mētan**: **mētst, mētt, mēttest** in the same order. Third-singular **læt/mēt** are valid final-**t** alternatives. The long vowels remain long in every requested form; the past of **lædan** has **dd**, that of **mētan tt**.
6. **Īecan**: present 1 singular **īece**; present 3 singular **īecð**; preterite 1 singular **īecte**. **Gierwan**: **gierwe, giereð, gierede** in the same order. Preserve the selected **w** in the first form and its absence in the other two. No sentence frame for "increase" or "prepare" is being tested.
7. **Geręstan**, "rest":

Person and number	Present	Preterite
1 sg.	geręste	geręste
2 sg.	geręstest	geręstest
3 sg.	geręst	geręste
1–3 pl.	geręstað	geręston

Hē geręste hine, "he rested himself/he rested". **Hē** is nominative, **hine** accusative and coreferential with it. Contracted present 2 singular **geręst** is also valid; the table selects **geręstest**. Past **geręste** has one **t**, and its spelling alone permits first or third singular.

8. **Sęllan**, "give":

Person and number	Present	Preterite
1 sg.	sęlle	sealde
2 sg.	sęlst	sealdest
3 sg.	sęlð	sealde
1–3 pl.	sęllað	sealdon

Ic sęlle, "I give"; **ic sealde**, "I gave". The changed past stem is lexical. Present **sęlest/sęleð** are valid alternatives to **sęlst/sęlð**; they do not produce a regular past in **-ede**.

9. Present 2 singular **gewyrcst**; present 3 singular **gewyrcð**. Preterite: 1 singular **geworhte**, 2 singular **geworhtest**, 3 singular **geworhte**. Retain **ge-** and the past **worht-** stem. This is the paradigm of **gewyrcean**, not a general transformation licensed for every prefixed verb.

10. Present: 1 singular **gefręmme**, 2 singular **gefręmest**, 3 singular **gefręmeð**, all plural **gefręmmað**. Preterite 1 singular **gefręmede**. The **mm/m** alternation belongs to this short-stem family; neither a uniform doubled consonant nor the **gefylde** pattern gives the selected answers.
11. Present 1 singular **ęfne**; present 2 singular **ęfnest**; preterite 1 singular **ęfnede**; preterite all plural **ęfnedon**. Source-supported **ęfnde/ęfndon** are valid contracted past alternatives. This task tests the forms, not an independently assigned complement construction.
12. **Nęrian**, "save":

Person and number	Present	Preterite
1 sg.	nęrie	nęrede
2 sg.	nęrest	nęredest
3 sg.	nęreð	nęrede
1–3 pl.	nęriað	nęredon

Wit nęriað, "we two save"; **ðū nęredest**, "you saved". Retain present **i** in the first singular and plural, but not in **nęrest/nęreð** or the selected past **nęred-**. Dual **wit** takes the plural verb.

13. **Lufian**, "love":

Person and number	Present	Preterite
1 sg.	lufie	lufode
2 sg.	lufast	lufodest
3 sg.	lufað	lufode
1–3 pl.	lufiað	lufodon

The present second-singular ending contains **a**, **-ast**; the preterite has **o**, **-od-**. Its infinitive **-ian** does not justify Class I **-est/-ede**. **Lufedon** is a valid source plural alternative; **lufodon** is the selected target.

14. **Geblētsian**: present 3 singular **geblētsað**; preterite 2 singular **geblētsodest**; preterite all plural **geblētsodon**. **Gehālgian**: **gehālgað, gehālgodest, gehālgodon** in the same order. The prefixes and the lexical quantities **ē/ā** remain; **-að** is singular here, whereas **-iað** is the selected present plural.

15. **Habban**, “have, possess”:

Person and number	Present	Preterite
1 sg.: ic	hæbbe	hæfde
2 sg.: ðū	hæfst	hæfdest
3 sg.: hē / hēo / hit	hæfð	hæfde
1–3 pl.: wē / gē / hīe	habbað	hæfdon

Each slash-separated pronoun has the verb printed in its row. The third singular may use any appropriate **hē/hēo/hit**; the plural row represents each of first, second and third person. Source variants **hafast, hafað, hæbbað** remain valid. The requested paradigm is affirmative; **næbbe** is a negative form.

16. **Libban**, “live”:

Person and number	Present	Preterite
1 sg.	libbe	lifde
2 sg.	leofast	lifdest
3 sg.	leofað	lifde
1–3 pl.	libbað	lifdon

Keep **libb-** in the selected first singular/plural present, **leof-** in the other present singular persons, and **lifd-** in the past. **Lifiað** is a valid alternative present plural; the selected table is not a regular **lufian** paradigm.

17. **Sęcgan**, “say”:

Person and number	Present	Preterite
1 sg.	sęcge	sægde
2 sg.	sægst	sægdest
3 sg.	sægð	sægde
1–3 pl.	sęcgað	sægdon

Documented alternatives include **sęgst/sagast**, **sęgð/sagað**, plural **sęcgeað**, and the past series **sǣde, sǣdest, sǣdon**. Use a source-supported series and preserve its quantities. No indirect-speech construction is being tested.

18. **Hycgan**, “think”:

Person and number	Present	Preterite
1 sg.	hycge	hogode
2 sg.	hygst	hogodest
3 sg.	hygð	hogode
1–3 pl.	hycgað	hogodon

Documented alternatives include **hogast/hogað**, plural **hycgeað**, and past **hogde, hogdest, hogdon**. The full selected morphology does not itself provide an indirect question or other complement frame.

19. All seven given forms belong to negative **nabban**:

Form	Analysis	Meaning
næbbe	present 1 singular	I do not have
næfst	present 2 singular	you do not have
næfð	present 3 singular	he/she/it does not have
nabbað	present 1, 2 or 3 plural	we/you/they do not have
næfde	preterite 1 or 3 singular	I/he/she/it did not have
næfdest	preterite 2 singular	you did not have
næfdon	preterite 1, 2 or 3 plural	we/you/they did not have

The plural verb forms also occur with appropriate dual subjects. The given spelling alone does not select a plural person or distinguish the two singular persons of **næfde**. Recognition is sufficient; unaided production was not requested.

20. **Hīerde → hīeran**, “heard”; **sealde → sęllan**, “gave”; **geworhte → gewyrcean**, “made”; **gefrępmede → gefrępman**, “performed/accomplished”; **lufode → lufian**, “loved”; **lifde → libban**, “lived”. All six are preterites and all permit **first or third singular indicative**. The infinitive citation identifies the lemma; it is not the form to insert into the sentence.

11. Cases, reference and clauses

1. **“He hears them. They hear him.”** In the first clause **hē** is nominative masculine singular, the man; **hīe** is accusative plural, the birds. In the second **hīe** is nominative plural, the birds; **hine** is accusative masculine singular, the man. The hearer and the entity heard exchange roles, so **hīerð** becomes plural **hīerað**. The specified referents rule out an unrelated feminine singular reading of the first object **hīe**.

2. **Ic sęlle ðæm męnn sæd. Ic sęlle him sæd.** The man is the dative recipient; **him** replaces that entire noun phrase. **Sæd** is the accusative thing given. Accusative **hine** would not preserve the recipient construction; the noun's dative singular is **męnn**.
3. **"We two have food. The man gives us two water." Wit** is nominative dual, subject of plural **habbað**. **Unc** is dative dual, the recipient of **wæter**. It does not control singular **sęlð**; nominative **se mann** does.
4. **Git nęriað mē. Ic hīere inc. Git** is nominative dual and takes plural **nęriað**; **mē** is accusative singular. In the second clause **inc** is accusative dual, the two people addressed. Singular **hīere** agrees with **ic**.
5. **Sēo eorðe hæfð wæter. Hēo hæfð gærs.** "The earth has water. It has grass." **Eorðe** is feminine, so the replacement nominative is **hēo**. English "it" is natural; Old English **hit** would not preserve the stated noun's gender.
6. **His hof is on ðære eorðan. His fuglas libbað on ðæm hofe.** The male possessor gives **his** in both clauses. Singular **hof** and plural **fuglas** determine **is/libbað**, not the possessor. Both locations take dative: **eorðan** and **hofe**.
7. **Hēo hæfð hof. Fuglas libbað on hiere hofe. Hiere** identifies the female possessor; neuter dative **hofe** does not change it to **his/him**. The noun takes dative because it gives the location after **on**.
8. **Hīe habbað hof. Hiera hof hæfð fuglas.** The first subject is plural **hīe**. The second subject is singular **hof**, possessed by the plural group; therefore its verb is **hæfð**. **Hiera** remains the invariant genitive possessor.
9. **Ic geręste mē. Hē geręste hine.** Subjects: nominative **ic**, **hē**. Objects: accusative **mē**, **hine**, each referring back to its subject. The past verb is identical in first and third singular; that does not make the subjects interchangeable. Natural English may omit the reflexive after "rested".
10. **Git geręstað inc. Hīe geręstað hīe.** The first object is accusative dual **inc**; the second is accusative plural **hīe**. Both verbs use the plural form, but the pronouns preserve the different number references. In the second clause the first **hīe** is nominative, the second accusative.
11. **Ic ne hīere ðone fugol. Hē ne lufað ðā fuglas.** "I do not hear the bird. He does not love the birds." **Ne** precedes each finite verb. English "do/does" is part of the translation, not an extra Old English verb.

12. **Đū ne hīerdest hine. Wē ne sęndon ðā fuglas.** Keep past second-singular **-dest** and past plural **-on**. **Hine** and **ðā fuglas** are accusative objects. Present **hīerst/sęndað** would change the tense.
13. **Ic sęlle mē męte. Ic sęlle him męte.** Both **mē** and **him** are dative recipients; **męte** is the accusative thing given. Only **mē** is reflexive, since it refers to the subject **ic**. The dative form **him** does not mean "himself" merely by its spelling.

12. Translation

1. **Se mann sętte ðæt sǣd. Đā męnn sęndon hit.** Singular subject **se mann** takes **sętte**; plural **ðā męnn** takes **sęndon**. Neuter accusative **hit** replaces **ðæt sǣd**. No direction phrase is needed to express "put down" in this assigned sense.
2. **Ic mētte ðē. Đū mēttest mē. Wit geręston unc.** The first two objects are accusative singular; **unc** is accusative dual and reflexive. The dual subject requires plural past **geręston**. Preserve **ē** in **mētte/mēttest** and the single **t** in **geręston**.
3. **Hē nęrede ðone mann and lufode hine. Hē ne sęnde hine.** The first **hē** remains the subject of both **nęrede** and **lufode**. Both **hine** objects refer to the rescued man. Repeating **hē** before **lufode** is grammatical and preserves the meaning; a plural verb would not.
4. **Đū geblētsodest ðone dæg. Hīe gehālgodon hine.** The first verb is second singular preterite, the second third plural preterite. **Dæg** is masculine; the referring accusative is **hine**, naturally translated "it". **Hit** would not preserve that grammatical gender.
5. **"He made his dwelling. They performed their work. He rested himself in the dwelling."** "Built" is suitable for **geworhte** here; "accomplished/completed" for **gefręmedon**; ordinary "rested" may omit English "himself". **His/hiera** identify possessors, **hine** is reflexive accusative, and **on ðǣm hofe** gives a dative location. Do not translate **gefręmedon** as the separate unprefixed sense "benefited".
6. **Wē habbað ðæs mannes sǣd. Wē sęllað him wæter. Hē hīerð ūs. Đæs mannes** is the limiting genitive before accusative **sǣd**; no extra head article is needed in the selected pattern. **Him** is dative recipient, **ūs** accusative object. The last verb is singular because its subject is **hē**.

13. Two connected readings

1. A model translation prepared from the Old English:
"The man had seed and water. The men had a dwelling and birds. The birds lived in their dwelling. The man gave the men seed and water. They loved the birds and heard them. They gave them seed and water. They did not send the birds. They performed their work and rested themselves. The man said: 'I love the birds.'"
In the intended sequence the men receive seed and water, care for the birds, and give them seed and water. "House/home" for **hof**, "accomplished/completed" for **gefręmedon**, and plain "rested" are defensible. **Ic** in the final direct quotation is the speaking man; its present **lufie** is not changed to past just because **sægde** is past. A translation that consistently explains another plausible plural reference should be assessed for that interpretation, not rejected because it differs from the model's unstated antecedents.

2. The intended references are:

Sentence and occurrence	Analysis	Intended referent
3: hiera	genitive plural possessor	the men
5: first Hīe	nominative plural	the men
5: second hīe	accusative plural	the birds
6: Hīe	nominative plural	the men
6: him	dative plural recipient	the birds
7: Hīe	nominative plural	the men
8: first Hīe	nominative plural	the men
8: hiera	genitive plural possessor	the men
8: final hīe	accusative plural, reflexive	the men

The subject verbs and the assigned constructions establish the cases of the **hīe** forms. They do not distinguish men from birds, both available plural antecedents. **Hiera** marks a plural possessor, not which plural group possesses. **Him** itself also permits masculine/neuter dative singular: an interpretation in which a suitable singular recipient is meant needs contextual explanation rather than a claim that the spelling is impossible. The model's giving-and-care sequence favours men as givers and birds as recipients. All **ðā** in this account are articles, not the source reading's temporal adverb.

3. **A to B:** "I have seed. You have water." **Ic** is A; **ðū** is B.
B to A: "We two give the birds food. They hear us two." **Wit** includes B and A; **hīe** refers to the birds, **unc** to A and B.
C to A and B: "You two love the birds. I hear you two." **Git** includes A and B; **ic** is C; **inc** refers to A and B.
A to B, C and D: "We love them. You hear them, and they hear you." By the given setting **wē** includes all four workers; **gē/ēow** identify B, C and D. The **hīe** forms refer to the birds. The speaker changes between turns; a first-person pronoun cannot be assigned permanently to A throughout the dialogue.

4. **Unc** is accusative dual, A and B, in **Hīe hīerað unc**: nominative plural **hīe**, the birds, controls **hīerað**. **Inc** is accusative dual, A and B, in **Ic hīere inc**: nominative singular **ic**, speaker C, controls **hīere**. **Ēow** is accusative plural, B, C and D, in **hīe hīerað ēow**: nominative plural **hīe**, the birds, controls **hīerað**. The object pronoun gives the people heard, not the finite verb's person or number.

5. **Se mann hæfð sæd and wæter. Đā męnn habbað hof and fuglas. Đā fuglas libbað on hiera hofe. Se mann sęlð ðæm mannum sæd and wæter.**

The changes are **hæfde → hæfð**, **hæfdon → habbað**, **lifdon → libbað**, **sealde → sęlð**. Subjects, accusative objects, dative location and dative recipients remain unchanged. **Sęleð** is a valid source alternative to selected **sęlð**.

6. **"They performed their work and rested themselves."** The first **hīe** is the nominative plural subject of both **gefręmedon** and **geręston**. Accusative **weorc** is the object of the first verb; the final accusative **hīe** is the reflexive object of the second. **Hiera** is a genitive plural possessor, referring to the men in the intended account. "Accomplished/completed their work and rested" is natural English. Do not analyse **hiera** as the subject or **hīe** as an independent new actor merely because it follows the second verb.

14. Source reading: the Sabbath

1. A close model translation from the supplied Old English:
"Accordingly, then, the heavens and the earth and all their array were completed. And God then completed on the seventh day his work which he had made, and he rested himself on the seventh day from all the work which he had performed. And God blessed the seventh day and hallowed it, because on that day he ceased from his work which he created to make."
"Thus" may replace "accordingly"; "finished" may replace "completed"; "made holy/consecrated" may replace "hallowed". English "rested" need not retain "himself". Simple "made/performed" as well as "had made/had performed" can convey the relative past actions. Preserve the source's distinct completing, resting, blessing and hallowing, and its final causal relation. **Hine** after hallowing refers to the day, not God.
The ending deliberately remains close to **gescēop tō wyrceanne**. Cook's own note gives "created to make"; a defensible close "created to do" may also convey the relation. The understood maker/doer is God. Neither "created and made" nor "finished creating" translates that relation as stated. The learner may consult the supplied explanation; independent mastery of this infinitive, the relative clauses or the passive is not being assessed. [1]

2. All six are **third-person singular preterite indicative**:

Form in the passage	**Headword**	**Class**	**Meaning here**
gefylde	gefyllan	I	completed/finished
geworhte	gewyrcean	I	made
geręste	geręstan	I	rested
gefręmede	gefręmman	I	performed/ accomplished
geblētsode	geblētsian	II	blessed
gehālgode	gehālgian	II	hallowed/made holy

The singular subject fixes third person here, although these verb spellings can be first singular elsewhere. Do not count the supplied strong **geswāc/ gescēop**, familiar **wǣron**, the participle **fullfręmede**, or infinitive **wyrceanne** as one of the six requested weak preterites. Headword lookup is expressly allowed.

3. In **geręste hine**, **hine** is masculine accusative singular referring back to **God/hē**, the subject: "rested himself", naturally "rested". It is reflexive. In **hine gehālgode**, **hine** is masculine accusative singular referring to **ðone seofoðan dæg**: "hallowed it/made it holy". It is an ordinary object, not reflexive. The identical pronoun form expresses different reference relations; it does not inherently mean "self".
4. **Hiera frætwung**: the possessors are collectively the heavens and earth; the possessed noun is nominative feminine singular **frætwung**, their array. **His weorc**: the possessor is God; the possessed noun is accusative neuter singular **weorc**, his work. **His weorces**: the same possessor, God, with genitive neuter singular **weorces**, governed by supplied **geswāc**. **Hiera/his** are genitive pronouns selected by the possessor; they do not inflect with the possessed head. In these actual phrases all three possessed heads are singular; the two work forms specifically illustrate a change of case. A change of head number would likewise leave the third-person possessor unchanged.
5. **Heofonas**: nominative plural. **Eorðe**: nominative singular. **Frætwung**: nominative singular. The complete coordinated subject is **heofonas and eorðe and eall hiera frætwung**, "the heavens and the earth and all their array". It is the subject of plural **wǣron** in the supplied passive expression. **Hiera** is a possessor inside the last noun phrase; **fullfręmede** is the supplied participle, not a fourth subject.
6. God **completed his work**, **rested from it**, **blessed the seventh day**, and **hallowed that day**. The causal clause also describes his **ceasing from his work on that day**, using supplied **geswāc**. The temporal phrases are supplied as "on the seventh day/on that day". The direct object of **geblētsode** is the day; the following **hine** resumes that day. An answer that makes God hallow himself changes the source's reference.
7. The reason is that **on that day God ceased from his work**. The following relative phrase describes that work as what he **created to make/do**. The genitive after "ceased", the causal link, and the entire relative/infinitive phrase come from the supplied help. God remains the understood maker; the work is not made into a new subject of **wyrceanne**. Preserve this relation without requiring one uniquely smooth English paraphrase. [1]

15. Review

1. **Wit hæfdon sǣd. Wē sealdon ðǣm fuglum męte. Hīe ne hīerdon ūs.** “We two had seed. We gave the birds food. They did not hear us.” All three finite verbs become preterite; only the last clause receives **ne**. Dual **wit** still takes a plural form, and the noun/pronoun cases remain unchanged.
2. **Hē sęlð mē sǣd. Wit habbað hit. Đā fuglas hīerað unc.** The four repairs are **Hine → Hē** for a nominative subject; **ic → mē** for a dative recipient; **hæfst → habbað** for agreement with dual **wit**; **ūre → unc** for an accusative dual object. The rejected forms are real forms used in the wrong roles, not invented spellings. **Hit** correctly refers to neuter **sǣd**.
3. **Se mann hæfde fuglas. Hē sealde him sǣd. Hē geręste hine.** “The man had birds. He gave them seed. He rested himself.” **Hē** refers to the introduced man; dative plural **him** to the birds; accusative **hine** reflexively to the man. Accept grammatical word-order or documented spelling alternatives that preserve these past actions and references. Replacing every later pronoun with the noun could express similar content but would not satisfy the requested pronoun practice.

Source notes

[1] Cook, *A First Book in Old English*, second edition (1895), Reader I, p.128 / one-based PDF144, final paragraph, editorial prose lines 1–7 (only marginal 5 printed). The model follows the checked Old English rather than a modern biblical version. Note 12 supplies **creavit ut faceret**, "created to make"; §200, p.106 / PDF122, explains the inflected infinitive. The temporal accusative, cessation genitive and relative-clause support follow the precise locators in the learner's source notes.

The finite and pronoun models use Cook §§81–83,96,113–124 and the audited lexical entries. Selected contractions and alternatives were independently checked against Wright and Wright, *Old English Grammar*, second edition (1914), §§305,476,524,528–529,532–533. Dual agreement is explicitly supported by Ringe and Taylor, *The Development of Old English* (2014), §1.1.2, p.6. The first unit's noun/article paradigms remain the basis of the nominal forms; no inherited-course milestone is assumed.

UNIT 3

Answer key

Using the key

The models use the lesson's selected forms. Documented spelling and inflectional alternatives remain valid Old English; distinguish them from recall of a specifically requested form. Word order may vary when the same cases, agreement, reference and meaning remain clear. Preserve vowel length and **ę**.

Each row of a full paradigm labels every requested case, including identical spellings. Ordinary weak genitive plural **-ra** is the selected pattern, but Cook also admits **-ena** and **-a**. These alternatives are not errors merely because they differ from the model. Comparative stems need their own stated genitive-plural choices. An ordinary adjective after a possessive may be strong or weak; a possessive does not impose a universal weak ending. [1]

Instrumental forms, **eall**, and plural **ān** have recognition/reference limits. Their display does not authorize independent instrumental syntax, quantifier constructions, or cardinal "one" with plural count nouns. The source-reading help remains available throughout its tasks. The answers and translations below are newly prepared models, not Cook's own answer key.

Adjectives

A1. Complete strong **gōd**, “good”:

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	gōd	gōd	gōd
Genitive	gōdes	gōdes	gōdre
Dative	gōdum	gōdum	gōdre
Accusative	gōdne	gōd	gōde

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	gōde	gōd	gōda
Genitive	gōdra	gōdra	gōdra
Dative	gōdum	gōdum	gōdum
Accusative	gōde	gōd	gōda

The feminine nominative singular and neuter nominative/accusative plural have no **-u** after this long stem. Masculine plural **gōde** and feminine plural **gōda** remain distinct selected forms.

A2. Complete strong **glæd**, “glad”. Bold forms have stem **a** instead of **æ**:

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	glæd	glæd	**gladu**
Genitive	**glades**	**glades**	glædre
Dative	**gladum**	**gladum**	glædre
Accusative	glædne	glæd	**glade**

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	**glade**	**gladu**	**glada**
Genitive	glædra	glædra	glædra
Dative	**gladum**	**gladum**	**gladum**
Accusative	**glade**	**gladu**	**glada**

The selected vowel changes before the vowel endings shown here, including **glades** and **glade**. It remains **æ** before consonantal endings in **glædne, glædre, glædra**. Do not replace every **æ** mechanically.

A3. Complete weak **gōd**:

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	gōda	gōde	gōde
Genitive	gōdan	gōdan	gōdan
Dative	gōdan	gōdan	gōdan
Accusative	gōdan	gōde	gōdan

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	gōdan	gōdan	gōdan
Genitive	gōdra	gōdra	gōdra
Dative	gōdum	gōdum	gōdum
Accusative	gōdan	gōdan	gōdan

Selected adjective genitive plural **gōdra** contrasts with the ordinary weak-noun **-ena**, as in **steorrena**, "of stars". Cook also allows weak-adjective **gōdena** and **gōda**: these are valid alternatives, not proof that the ordinary selected adjective ending must be **-ena**. [1]

A4. The requested cells are:

Headword	Strong masculine genitive singular	Strong feminine nominative singular	Strong neuter nominative plural	Weak neuter nominative singular
micel	micles	miclu	miclu	micle
lȳtel	lȳtles	lȳtlu	lȳtlu	lȳtle
īdel	īdles	īdel	īdlu	īdle
ǣmtig	ǣmtiges	ǣmtig	ǣmtig	ǣmtige

The first three have selected **micl-, lȳtl-, īdl-** before the relevant vowel endings; **ǣmtig-** retains **i**. The endingless feminine **īdel/ǣmtig** and neuter plural **ǣmtig** are deliberate selections. Source-supported retained-vowel or endingless alternatives, such as feminine **lȳtelu/lȳtel**, are valid, although the task requests the selected forms.

A5. For **æppelbære**, “fruit-bearing”:

Cell	Form
Strong masculine nominative singular	æppelbære
Strong feminine nominative singular	æppelbæru
Strong masculine accusative singular	æppelbærne
Strong neuter nominative plural	æppelbæru
Strong genitive plural, all genders	æppelbærra

The headword belongs to the **-e** pattern. Its **-e** is present where no other ending replaces it; it is not evidence that the masculine nominative is weak. Adding the consonantal endings gives **-rne/-rra**, not an extra retained **e**.

Headword	Strong masculine nominative	Strong masculine genitive	Strong masculine dative	Strong masculine accusative	Weak masculine nominative
gearu	gearu	gearwes	gearwum	gearone	gearwa
hēah	hēah	hēas	hēaum	hēanne	hēa

Gearu has **gearw-** before vowel endings and selected **gearo-** before the consonantal accusative ending. **Hēah** loses **h** and contracts in its selected oblique forms. Dative **hēam** and accusative **hēane** are documented alternatives; they do not change the case analysis.

A6. Ðing, neuter, “thing”:

Case	Singular	Plural
Nominative	ðing	ðing
Genitive	ðinges	ðinga
Dative	ðinge	ðingum
Accusative	ðing	ðing

Ðā ðing means “the things”. The plural nominative/accusative has no added ending because this is a heavy-stem neuter. Identical singular and plural noun spellings do not make the phrase singular.

A7. Se gōda fugol; sēo gōde wyrt; ðæt gōde trēo; ðā gōdan fuglas. “The good bird; the good herb; the good tree; the good birds.” Each adjective becomes weak after its article. The first three remain singular, the fourth masculine plural; all remain nominative.

A8. “The good birds are in the dwelling. The birds are good.” **Gōdan** is weak nominative masculine plural inside **ðā gōdan fuglas**. Predicate **gōde** is strong nominative masculine plural, agreeing with **fuglas**. The subject’s article does not make a separate predicate adjective weak. **On ðæm hofe** is a dative location.

A9. Đā fuglas libbað on ðæs gōdan mannes hofe. The birds are the nominative plural subject. **Hofe** is dative neuter singular after locative **on**; **ðæs gōdan mannes** is an embedded genitive masculine singular phrase, "of the good man". **Gōdan** agrees with **mannes**, not **hofe**. Placing the genitive after the head can express the same relation, but does not satisfy the requested position.

A10. Gōde can be strong masculine nominative plural, masculine instrumental singular, or neuter instrumental singular in the stated table cells. The corresponding **glæd** forms are **glade** in all three cells, with **a**. Identical spellings do not collapse the analyses. Recognition of the instrumental cells is sufficient; no independent instrumental construction is required.

Possessives

P1. Complete agreeing **mīn**, "my":

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	mīn	mīn	mīn
Genitive	mīnes	mīnes	mīnre
Dative	mīnum	mīnum	mīnre
Accusative	mīnne	mīn	mīne

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	mīne	mīn	mīna
Genitive	mīnra	mīnra	mīnra
Dative	mīnum	mīnum	mīnum
Accusative	mīne	mīn	mīna

The owner is first-person singular throughout. The **possessed noun's gender, number and case** determine the ending. Thus a single owner can possess a plural noun; the possessive ending does not count the owners.

P2. Ic hīere ðīnne fugol. Đū hīerst mīne fuglas. Đīnne is masculine accusative singular with **fugol**; **mīne** is masculine accusative plural with **fuglas**. The singular addressee selects **ðīn-** and **ðū**, while the two subjects select **hīere/hīerst**. Preserve the doubled **nn** in **ðīnne**.

P3. Wit habbað hof. Uncer hof is lȳtel. Git habbað trēo. Incer trēo is micel. Wit/git refer to two people and take plural **habbað**. **Uncer/incer** preserve the two-person possessors, but each agrees with a singular neuter noun. Consequently **hof/trēo** take singular **is** and strong neuter singular predicates **lȳtel/micel**.

P4. Ūre fuglas libbað on ēowrum hofe. Ūre identifies several speakers as owners and agrees with masculine nominative plural **fuglas**. **Ēowrum** identifies several addressees as owners and agrees with neuter dative singular **hofe**. The locative construction, not the number of owners, determines the dative.

P5. His fuglas libbað on mīnum hofe. Hiera hof is māre ðonne ūre hof. His/hiera are invariant third-person possessors, here a male singular owner and plural owners. **Mīnum** agrees with dative neuter singular **hofe**; **ūre** with nominative neuter singular **hof**. Both dwellings in the comparison are nominative subjects, with the second **is** unexpressed. Adding that repeated **is** is acceptable.

P6. The given contexts fix these analyses:

Phrase	Owner	Possessed noun
mīne fuglas	first person singular	fuglas: masculine nominative plural
uncer fugol	first person dual	fugol: masculine nominative singular
ēowrum hofe	second person plural	hofe: neuter dative singular

The stem identifies the owner's person and number. The inflected form agrees with the possessed noun; its ending may coincide with other gender/number/case cells. Here the subject or locative context and the noun establish the precise analysis. **Uncer** has no added ending in this nominative cell; it does not make the bird dual.

Comparison

C1. Selected masculine nominative singular forms:

Positive	Comparative	Weak superlative
lēof	lēofra	lēofosta
eald	ieldra	ieldesta
gōd	bętera	bętsta
micel	māra	mǣsta
lȳtel	lǣssa	lǣsta
yfel	wiersa	wierresta

Lēof illustrates regular comparison; **eald** has the selected umlaut forms. The remaining four series require their lexical stems. A strong superlative citation such as **bętst** is a real form, but it does not meet the request for a weak masculine nominative singular.

C2. Complete weak comparative **māra**, "greater/larger":

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	māra	māre	māre
Genitive	māran	māran	māran
Dative	māran	māran	māran
Accusative	māran	māre	māran

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	māran	māran	māran
Genitive	mārra	mārra	mārra
Dative	mārum	mārum	mārum
Accusative	māran	māran	māran

The neuter nominative/accusative singular is **māre**, and the selected genitive plural is **mārra**, with **rr**. In the six comparison series the selected genitive plurals are **lēofra, ieldra, bęterra, mārra, lǣssena, wiersena**. The first two simplify the repeated consonant after another consonant; the latter two use the licensed **-ena** alternative. Do not form every comparative genitive plural by mechanically attaching written **-ra**. The selected completions apply checked rules; a defensible source variant remains valid language. [1]

C3. For **mǣst**, “greatest”:

Declension	Masculine nominative singular	Neuter nominative singular	Feminine nominative singular	Genitive plural, all genders	Dative plural, all genders
Strong	mǣst	mǣst	mǣst	mǣstra	mǣstum
Weak	mǣsta	mǣste	mǣste	mǣstra	mǣstum

The degree remains superlative in both declensions. The coinciding plural obliques do not erase the strong/weak distinction in the singular. The table gives the selected genitive plural; the ordinary weak alternatives described above remain possible.

C4. Đæt micle trēo is māre ðonne ðæt lȳtle trēo. Both trees are nominative neuter singular: they are the contrasted subjects, with a repeated **is** understood after the second tree. **Micle/lȳtle** are weak attributive adjectives after articles. **Māre** is weak because it is comparative, and **-e** is its neuter nominative singular ending. A repeated final **is** is acceptable. [2]

C5. Se fugol is lēofra ðonne se fisc. Đæt ealde hof is bętere ðonne ðæt micle hof. The first comparative is masculine nominative singular, the second neuter nominative singular. Both are weak despite being predicates. The standards **se fisc** and **ðæt micle hof** are nominative in these parallel comparisons. The second sentence requires adjectival **bętere**, not adverbial **bęt**.

C6. Đæt ieldeste trēo; se lēofosta fugol; ðæt mǣste weorc; se bętsta mann; se lǣsta steorra. All are nominative singular with weak superlatives. **Trēo/weorc** are neuter and take **-e**; **fugol/mann/steorra** are masculine and take **-a**. Preserve **ield-**, with no added macron, and the irregular superlative stems.

C7. Se fugol is lǣssa. Đā fuglas sindon lǣssan. “The bird is smaller. The birds are smaller.” Comparative **lǣssa** is weak masculine nominative singular; the plural is **lǣssan**. Bare **lǣss** does not supply the required agreeing comparative in the selected system. The subject’s number also changes **is** to **sindon**.

Adverbs

V1. Wīde, wīdor, wīdost: “widely, more widely, most widely”. From supplied **sōð**, the selected adverb is **sōðlice**, “truly”. None changes for gender, case or number. **Wīd/sōð** are supplied derivational citations here; the task does not require their independent adjective paradigms. Do not add a macron to the **i** of **-lice**.

V2. Đā męnn geworhton ðæt gōde hof wel. Gōde is a weak accusative neuter singular adjective modifying the dwelling **hof**. **Wel** is an indeclinable adverb modifying the building action **geworhton**. The men control the plural verb; the adverb does not agree with either noun.

V3. Hē geworhte ðæt hof bęt. Hē geworhte ðæt hof bętst. “He built the dwelling better/best.” **Bęt/bętst** are the comparative and superlative adverbs of **wel**. They qualify how he built, so they have no agreement with accusative neuter **hof**. Adjectival **bętere** would not fulfill the requested adverbial target.

V4. “Truly, the work is very good”, compared with “The work is good”. **Sōðlice** presents the statement as true/indeed so; **swīðe** increases the degree of **gōd**. The adverbs do not inflect for the noun; predicate **gōd** does agree with neuter nominative singular **weorc**. This “truly” sense is distinct from the locally supplied narrative connective **sōðlice** in the Creation passage.

Cardinals

N1. Selected singular cardinal **ān**, “one”:

Case	Masculine	Neuter	Feminine
Nominative	ān	ān	ān
Genitive	ānes	ānes	ānre
Dative	ānum	ānum	ānre
Accusative	ānne	ān	āne

The number is one, so the accompanying count noun is singular. Preserve masculine accusative **ānne**. The reference plural forms do not license translating cardinal “one” with a plural count noun.

N2. The complete selected plural systems are:
Twēgen, "two":

Case	Masculine	Neuter	Feminine
Nominative	twēgen	twā	twā
Genitive	twēgra	twēgra	twēgra
Dative	twǣm	twǣm	twǣm
Accusative	twēgen	twā	twā

Ðrīe, "three":

Case	Masculine	Neuter	Feminine
Nominative	ðrīe	ðrēo	ðrēo
Genitive	ðrēora	ðrēora	ðrēora
Dative	ðrīm	ðrīm	ðrīm
Accusative	ðrīe	ðrēo	ðrēo

Both modify **plural** count nouns. Two does not require a special dual noun declension. Cook's **twēga**, **twām**, and neuter **tū** are valid alternatives to selected **twēgra**, **twǣm**, and **twā** in their respective cells.

N3. Twēgen męnn; twā wyrta; twā hofu; ðrīe fuglas; ðrēo niht; ðrēo trēowu. All six phrases are nominative plural. The two numerals distinguish masculine from neuter/feminine forms. Plural **niht** has no added ending here; it still means three nights. Neuter **tū hofu** is a documented alternative to **twā hofu**.

N4. Wē sealdon twǣm mannum sǣd. Hīe sealdon ðrīm fuglum wæter. The numeral and recipient noun are dative plural in each sentence; **sǣd/wæter** are the accusative things given. **Twām** is a valid dative alternative. Nominative **twēgen męnn** or **ðrīe fuglas** would not express the recipients in this construction.

N5. The selected nominative phrases are:

Meaning	Old English
four fish	fēower fiscas
five trees	fīf trēowu
six stars	siex steorran
seven days	seofon dagas
eight birds	eahta fuglas
nine men	nigon męnn
ten herbs	tīen wyrta
eleven years	endlefan gēar
twelve signs	twęlf tācnu

The nouns are plural count nouns; the cardinals four through twelve are uninflected in this taught position before them. **Gēar** has a zero plural ending, and **tācnu** shows noun-stem syncope. Do not replace these plural noun forms with singulars merely because the cardinals are invariant. Retain selected **endlefan** and hooked **ę** in **twęlf**.

Ordinals

O1. The singular phrases are:

Meaning	Nominative	Genitive
the second day	se ōðer dæg	ðæs ōðres dæges
the second night	sēo ōðru niht	ðære ōðerre niht
the second year	ðæt ōðer gēar	ðæs ōðres gēares

Ōðer remains strong after the article. It syncopates before vowel-initial **-es**, but retains **e** before consonantal **-re**. Feminine nominative **ōðer/ōðeru** are documented alternatives to selected **ōðru**. Genitive **niht** remains endingless; the phrase's construction and agreement establish its case.

O2. Complete weak **ðridda**, “third”:

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	ðridda	ðridde	ðridde
Genitive	ðriddan	ðriddan	ðriddan
Dative	ðriddan	ðriddan	ðriddan
Accusative	ðriddan	ðridde	ðriddan

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	ðriddan	ðriddan	ðriddan
Genitive	ðridra	ðridra	ðridra
Dative	ðriddum	ðriddum	ðriddum
Accusative	ðriddan	ðriddan	ðriddan

This ordinal is weak with or without a preceding article. Selected genitive plural **ðridra** simplifies **dd** before another consonant; dative plural **ðriddum** retains it. Do not copy the strong exception **ōðer** into the other ordinal paradigms.

O3. Ðrīe fuglas libbað on ðǣm ærestan hofe. Se ealda mann sealde ðǣm fīftan fugle męte. ***Ærestan*** agrees with neuter dative singular **hofe**, a location. **Fīftan** agrees with masculine dative singular **fugle**, the recipient. Both ordinals are weak. The first clause is present plural; the second is past singular. Here **on** is locative, not an untaught temporal construction.

Demonstratives

D1. Complete selected **ðes**, “this/these”:

Case	Masculine singular	Neuter singular	Feminine singular	Plural, all genders
Nominative	ðes	ðis	ðēos	ðās
Genitive	ðisses	ðisses	ðisse	ðissa
Dative	ðissum	ðissum	ðisse	ðissum
Accusative	ðisne	ðis	ðās	ðās

Keep short **e** in selected masculine **ðes** and long **ē** in feminine **ðēos**. These are the four requested cases; the distinct instrumental reference forms are not production targets here.

D2. Ðis trēo is micel. Ðæt trēo is lȳtel. Ðās fuglas libbað on ðǣm hofe. Neuter singular **ðis/ðæt** distinguish this tree from that tree; plural **ðās** identifies these birds. Dative **ðǣm** identifies that dwelling after locative **on**. The context assigns the pointing "that" sense to forms that can also serve as articles. Predicate **micel/lȳtel** are strong.

D3. Ic sęlle ðissum męnn sǣd. Ic hīere ðās fuglas. Ðissum męnn is masculine dative singular, the recipient. **Ðās fuglas** is masculine accusative plural, the object heard. The endings agree within each noun phrase; nominative **ðes mann** would not satisfy the giving construction.

D4. Ðes gōda mann; ðās miclan trēowu; gōde męnn. The first two adjectives are weak after demonstratives: masculine nominative singular **gōda** and neuter nominative plural **miclan**. Bare indefinite **gōde męnn**, "good men", has a strong masculine nominative plural adjective. No demonstrative is needed in the last phrase.

Controlled reading: Two dwellings and three birds

L1. A translation from the complete Old English account:
"The good men built two dwellings. One dwelling was large, and one dwelling was small. The large dwelling was larger than the small dwelling. They gave the large dwelling to the old man. He had three birds. He gave his birds seed and water. The birds lived in the large dwelling. The man said: 'My birds are good. Our work is good.'"
"Made" for **geworhton**, "great/little" for **micel/lȳtel**, and "houses/homes" for **hofu** are defensible in this setting. The builders give the dwelling; the old man receives it and then gives seed and water to his birds. By the stated orientation he is one of the builders: **mīne** refers to his birds, while **ūre** includes the group's work. Do not change the two quoted present statements to past merely because **sægde** is past.

L2. The counted things and analyses are:

Occurrence	Counted noun	Numeral analysis
twā hofu	two dwellings	neuter accusative plural: object of geworhton
first ān hof	one dwelling, the large one	neuter nominative singular: subject of wæs
second ān hof	one dwelling, the small one	neuter nominative singular: subject of wæs
ðrīe fuglas	three birds	masculine accusative plural: object of hæfde

The two identical **ān** forms have the same grammatical analysis but identify different dwellings. **Twā/ðrīe** agree with plural nouns; their spelling alone does not distinguish nominative from accusative.

L3. In **Mīne fuglas**, the owner is the speaking old man, first-person singular; the possessed noun is masculine nominative plural **fuglas**. **Mīne** has the corresponding agreeing **-e** form. In **Ūre weorc**, the owners are all the builders including the speaker, first-person plural; the possessed noun is neuter nominative singular **weorc**. **Ūre** is the selected singular neuter form of that possessive. Final **-e** therefore does not identify one unique gender or number, and it does not itself count the owners.

L4. The actual adjective occurrences are:

Kind	Form and location	Agreement
Strong predicate	micel; lȳtel, second sentence	each with its nominative neuter singular hof
Strong predicate	gōde, first quoted sentence	with nominative masculine plural fuglas
Strong predicate	gōd, second quoted sentence	with nominative neuter singular weorc
Weak attributive	gōdan, first sentence	with nominative masculine plural męnn
Weak attributive	micle; lȳtle, third sentence	each with nominative neuter singular hof
Weak attributive	micle, fourth sentence	with accusative neuter singular hof
Weak attributive	ealdan, fourth sentence	with dative masculine singular męnn
Weak attributive	miclan, seventh sentence	with dative neuter singular hofe
Weak comparative predicate	māre, third sentence	with the first nominative neuter singular hof

The comparative remains weak in predication. The same spelling **micle** serves different cases in the third and fourth sentences; clause roles identify the cells. **Mīne/ūre** are agreeing possessives, not additional weak attributive or predicate adjectives in this requested list.

L5. Đā gōdan męnn gewyrceað twā hofu. Ān hof is micel, and ān hof is lȳtel. Đæt micle hof is māre ðonne ðæt lȳtle hof. Hīe sęllað ðæt micle hof ðǣm ealdan męnn.

The changes are **geworhton → gewyrceað**, each **wæs → is**, and **sealdon → sęllað**. Noun-phrase cases, adjective endings, degree and referents remain unchanged. The plural builders still govern the plural active verbs; the singular dwellings govern **is**.

Source reading: the fourth day

R1. A close translation from the complete supplied source:
"God then said, 'Let there now be lights in the firmament of heaven, and let them separate day and night, and let them be for signs, for seasons, for days, and for years. And let them shine in the firmament of heaven and illuminate the earth'; it then came to pass thus. And God made two great lights: the greater light for the illumination of the day, and the lesser light for the illumination of the night; and he made stars. And he set them in heaven, so that they might shine over the earth, rule over the day and the night, and separate light and darkness; God then saw that it was good. And evening and morning came to pass, the fourth day." [3]
The opening **sōðlice** is a narrative connective here, glossed by Cook's Latin **autem**; the English opening absorbs it. "Let them serve as signs…" is a reasonable idiomatic paraphrase of **bēon tō tācnum**. "It was then so" can render the fulfillment formula, and "there came evening and morning, the fourth day" the closing formula. Preserve the wish, fulfillment, and all three later purposes: shining, ruling, and separating.
The two lights remain unnamed in this source. **Heofonan** is genitive in "the firmament of heaven", dative in "in heaven"; the supplied omitted subject of **gesętte** is God/he. **Gīemden** governs the genitives for day and night, whereas **tō** governs the illumination phrases' dative heads. The source's **męrgen** is the supplied variant of **morgen**. These supports may be consulted; neither a unique case for **ofer eorðan** nor unaided mastery of the supplied moods and resultative constructions is required.

R2. All three words in **twā miclu lēoht** are **neuter accusative plural**, the direct object of **geworhte**:

Source form	Headword	Analysis
twā	twēgen	cardinal two, agreeing with plural neuter lēoht
miclu	micel	strong adjective accusative neuter plural
lēoht	lēoht	heavy neuter count noun, accusative plural with zero ending

Micel has selected syncopated **micl-** before **-u**. The adjective is strong in this numeral phrase, which has no preceding article/demonstrative. The noun means two lights or luminaries, not an uncounted quantity of light. Preserve the source's exact **miclu**.

R3. Māre is the comparative of **micel**, “great/large”; **lǣsse** of **lȳtel**, “little/small”. Both are weak **accusative neuter singular**, agreeing with the respective singular **lēoht** in apposition to the two objects made. Their neuter nominative spellings are identical, but the larger object construction fixes accusative here.
The greater light is for the illumination of the day; the lesser is for the illumination of the night. Those purposes follow the supplied **tō ... līehtinge** construction. The passage does not require naming either light.

R4. The noun phrases are **ðæt māre lēoht** and **ðæt lǣsse lēoht**. Each **ðæt** is the neuter accusative singular article, agreeing with its light.
In **ðæt hīe scinen**, supplied **ðæt** introduces purpose: “so that they might shine”. In **ðæt hit gōd wæs**, it introduces the content of what God saw: “that it was good”. Neither conjunction agrees with a noun or supplies an article case. Their identical spelling does not make these four occurrences one construction.

R5. Both **geworhte** forms are **third-person singular preterite indicative** of **gewyrcean**. The first has subject **God** and object **twā miclu lēoht**, followed by the two explanatory singular light phrases. The second has subject **hē** and object **steorran**, “stars”, which precedes the subject and verb. The supplied **Bēon** and long-vowel **scīnen** express plural wishes: “let there be” and “let them shine”. They are present optative/subjunctive forms of different verbs, not members of the taught weak indicative paradigm of **gewyrcean**. The local help supplies this distinction; independent production of those moods is not tested. Later short-vowel **scinen** is a separately supplied past optative in the purpose clause.

R6. Gōd is strong positive **nominative neuter singular**, agreeing predicatively with **hit** in the supplied content clause. A predicate adjective does not become weak because the clause begins with conjunction **ðæt**. **Fēorða** is weak ordinal **nominative masculine singular**, agreeing with **dæg** in **se fēorða dæg**, “the fourth day”. The selected ordinals other than **ōðer** are weak. The larger closing resultative formula remains supplied; its interpretation does not require inventing a new independent agreement rule.

Review

X1. Đes gōda mann sęlð mīnum fuglum sǣd. Mīne fuglas libbað on his lȳtlum hofe. Đæt hof is māre ðonne ðæt trēo.

The birds are dative recipients in the first clause, nominative subjects in the second. **Mīnum/mīne** change accordingly; **his** remains invariant. **Lȳtlum** is the selected strong dative neuter singular adjective after the possessor. Weak **lȳtlan** is also a defensible adjective choice there: neither must be rejected merely because the other is selected. Both compared nouns are nominative, and **māre** is weak neuter singular. Source alternative **sęleð** is valid for selected **sęlð**.

X2. Se ōðer dæg wæs gōd. Mīne fuglas libbað on ðǣm miclan hofe. Se fugol is lǣssa.

The four repairs are **ōðra → ōðer**, because this ordinal remains strong; **Mīn → Mīne**, for masculine nominative plural agreement; **micel → miclan**, for weak dative neuter singular after the article; and **lǣss → lǣssa**, for a weak masculine nominative singular comparative. **Gōd** is already the correct strong predicate, so it does not change.

X3. One four-sentence model:

Ān hof is micel, and ān hof is lȳtel. Đæt micle hof is māre ðonne ðæt lȳtle hof. Eald mann hæfð ðrīe fuglas. Hē sægð: "Ic sęlle mīnum fuglum męte."

"One dwelling is large, and one dwelling is small. The large dwelling is larger than the small dwelling. An old man has three birds. He says: 'I give my birds food.'"

Other connected solutions are acceptable within the taught vocabulary and constructions. The essentials are two distinguishable dwellings of unequal size, a comparison, an old man with three birds, and a quotation in which he gives those birds food. In the model **mīnum** is an agreeing possessive with dative plural recipients **fuglum**; **męte** is the accusative thing given. The first-person **ic/mīn-** belongs to the speaking man. Merely reporting that he gives food, without the requested quotation and agreeing possessive, would miss those targets.

Cook I.4, items 1–17

The original item numbers are retained. Noun-phrase heads use the requested nominative convention; dependent genitives retain their own cases. A contextual accusative phrase can be valid Old English while missing that stated target. Put dependent genitives before their heads as requested. Equivalent postposed genitives are valid Old English, but miss this exercise's positioning convention.

1. Đā miclan hwalas. "The great whales." The adjective is weak nominative masculine plural after **ðā**; **hwalas** has the taught **æ/a** noun-stem alternation.

2. Sēo eorðe wæs īdel and ǣmtig. Both adjectives are strong nominative feminine singular predicates. ***Ǣmtig and īdel*** is also defensible: Cook's vocabulary gives both for empty/void. The subject's article does not make these predicate adjectives weak.

3. Đā ðing wǣron gōd. "The things were good." **Đing** is nominative neuter plural with zero ending; plural **wǣron** agrees with it. Strong neuter plural predicate **gōd** likewise has no added **-u**. Masculine **gōde** would not match the noun's gender.

4. Đā æppelbǣran trēowu. The adjective is weak nominative neuter plural; **trēowu** is the taught plural of **trēo**. The attested compound **æppelbǣre** supplies the meaning "fruit-bearing".

5. Đā miclan lēoht. "The great lights." The weak adjective and article accompany a nominative neuter plural count noun. This is the new luminary sense, not the earlier uncounted "light". Zero noun ending does not make the phrase singular.

6. Se lȳtla steorra. The adjective is weak nominative masculine singular, with selected stem **lȳtl-**. **Steorra** is masculine despite its final **-a**; neuter/feminine **lȳtle** would not be the selected agreement.

7. Se lǣssa fugol. "The smaller bird." Comparative **lǣssa** is weak nominative masculine singular; the comparative is weak even without an article.

8. Đæt māre trēo. "The larger tree." Comparative **māre** is weak nominative neuter singular. Masculine **māra** would not agree with **trēo**.

9. Đæs gōdan mannes līf. Đæs gōdan mannes is genitive masculine singular, "of the good man"; **līf** is the nominative neuter head. **Gōdan** agrees with the man, not with life. **Đæt līf ðæs gōdan mannes** is valid Old English, but its postposed genitive misses the requested positioning convention.

10. Đære seofoðan niht anginn. Seofoðan is weak genitive feminine singular with **niht**; **anginn** is the nominative neuter head, "beginning". The ordinal is weak in its own right. Endingless **niht** is genitive here.

11. Đæs miclan sǣs wæteru. "The waters of the great sea." **Đæs miclan sǣs** is genitive masculine singular; **wæteru** is nominative neuter plural. The adjective describes the sea, not the waters. Preserve the taught singular genitive **sǣs**.

12. Se ōðer dæg and sēo ōðru niht. Both heads are nominative singular. **Ōðer** stays strong after the article; selected feminine **ōðru** agrees with **niht**. **Sēo ōðer niht** and **sēo ōðeru niht** are documented alternatives. The original **(80)** is Cook's grammatical reference, not part of the phrase to translate.

13. Đæs ōðres gēares ðridda dæg. The limiting genitive **ðæs ōðres gēares** is neuter singular, "of the second year"; **ðridda dæg** is nominative masculine singular, "the third day". **Ōðres** is strong, while **ðridda** is weak even without an article immediately before it. **Se ðridda dæg ðæs ōðres gēares** is valid Old English, but its postposed genitive misses the requested positioning convention.

14. Đæs fīftan mannes męte. The ordinal is weak genitive masculine singular with **mannes**. **Męte**, "food", is the nominative masculine head; its final **-e** does not make it dative here.

15. Đæs siextan ǣfenes lēoht. Siextan agrees with genitive neuter singular **ǣfenes**. The head **lēoht** is nominative neuter singular in the mass sense "light", not a plurality of luminaries.

16. Đāra styriendlicra gesceafta weorc. The phrase **ðāra styriendlicra gesceafta** is genitive feminine plural; **weorc** is the nominative neuter plural head. Selected weak-adjective genitive **styriendlicra** has **-ra**. **Styriendlic**, "moving", is the taught lexical adjective; no independently recalled participle is required. Documented ordinary weak-genitive alternatives remain valid, but the model shows the selected ending.

17. Đæs ǣrestan dæges morgen. Ǣrestan is weak genitive masculine singular with **dæges**; **morgen** is the nominative masculine head. The selected ordinal **ǣresta** means "first". The source reading's supplied **męrgen** is a documented variant, but **morgen** remains the ordinary selected production form.

Source notes

[1] Cook, **A First Book in Old English**, second edition (1895), §§55–80, pp. 38–48, and §§83–85, pp. 49–51, provides the adjective, degree, numeral, possessive and demonstrative systems; §182, p. 100, treats adverbial modification. One-based PDF pages are printed pages +16. Cook §60 admits ordinary weak genitive-plural alternatives. Wright and Wright, **Old English Grammar**, second edition (1914), §§223, 259, 421–435, 440, 443–445, 448–452, 464 and 555–556 corroborates the checked stem changes, comparisons, possessives, numerals and adverbs. Selected comparative genitive plurals are applications of those stated patterns, not claims that Cook prints a full table for each word.

[2] R. D. Fulk, **An Introductory Grammar of Old English** (2014), corrected open-access reprint June 2020, §35, p. 22/PDF 34, prints a comparison with nominative **iċ** after **þonne**, attributed to **Beowulf** 469. The present exercises adapt that bounded comparison between subjects; they do not teach a universal nominative rule after every **ðonne**.

[3] Cook, Reader I, **The Creation of the World**, pp. 125–126/PDF 141–142: p. 125 lines 8–15 and p. 126 lines 1–4. Only marginal 10 and 15 are printed within the selected span; the remaining line positions are editorial counts. The translation follows the complete checked Old English and its separate apparatus, including p. 125 note 15 (**autem**), note 17 (genitive **heofonan**), note 23 (present optative), note 29 (omitted subject), and p. 126 notes 1–3 (past optative, governed genitive, ordinal). The source help also draws on Cook §§53, 138, 156.f, 166, 189, 193.a, 194 and 196.f. These notes support the local reading; they confer no additional production scope.

UNIT 4

Answer key

Using the key

The models use the lesson's selected forms. A documented alternative can be valid Old English while differing from an explicitly requested selected form. In particular, **findan** has selected first-singular preterite **fand** and third-singular **funde**; first-singular **funde** and third-singular **fand** are also valid. **Helpan** allows a genitive as well as a dative, although the lesson selects the dative construction. Do not confuse a missed target with impossible language.

Preserve vowel length and the distinction between **i/ī**, **ie/īe** and **ea/ēa**. The tables label every requested person and number. A column headed "1/2/3pl" includes all three plural persons; dual subjects use these plural forms. Word order may vary when cases, agreement, reference and meaning remain clear. Where a task requests a limiting genitive before its head, a grammatical postposed genitive still misses that positioning request.

Infinitive and past participle columns are supplied citations. **Bregdan** and **fēolan** remain recognition references. The source reading's local help remains available; neither its harder verb forms nor its source-only constructions become independent-recall requirements. The answers and translations below are newly prepared models, not Cook's own answer key.

Principal parts and tense

P1.
The four positions are:

Position	Form	Description
1	drīfan	Infinitive citation
2	drāf	Preterite singular principal part; here first or third person
3	drifon	Preterite plural principal part; any of the three persons
4	drifen	Past participle citation

Drāf and **drifon** are finite indicative forms. **Drīfan** and **drifen** are nonfinite citations; neither identifies a person and number in the indicative. The table does not by itself teach an infinitive clause, perfect or passive. [1]

P2.

Verb	Class	Second singular preterite	Stem used
rīdan	I	ride	rid-, as in ridon
bēodan	II	bude	bud-, as in budon
bindan	III	bunde	bund-, as in bundon

Each takes the plural-preterite stem plus **-e**. The singular principal parts **rād, bēad, band** do not supply the requested second-person stems. [1]

P3.

Drāf is first- or third-person singular preterite indicative. **Drifon** is first-, second- or third-person plural preterite indicative. A dual subject also takes the plural verb form; there is no separate dual ending.

Drifen is the supplied past participle. Its **-en** is not another personal ending of the finite paradigm. Do not treat the resemblance to **drifon** as identity of function.

P4.

Both verbs are second-person singular preterite indicative: "you rode" and "you heard." **Ride** has the short **i** of **ridon**, plus **-e**. The strong verb changes its stem vowel and adds no dental preterite marker. **Hīerdest** is the weak preterite of **hīeran**, with the dental **-d-** and second-singular **-est**.

Quantity matters: preterite **ride** has short **i**, unlike present **rīde**.

Class I

A1.

Person and number	Present	Preterite
1 sg.	drīfe	drāf
2 sg.	drīfst	drife
3 sg.	drīfð	drāf
1–3 pl.	drīfað	drifon

Present **ī** contrasts with preterite singular **ā** and plural-based **i**. The second singular is **drife**, not a form made from **drāf**. [2]

A2.

Verb	Present 1sg	Present 2sg	Present 3sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
rīdan	rīde	rītst	rītt	rād	ride	ridon
wrītan	wrīte	wrītst	wrītt	wrāt	write	writon

Stem-final **d** with **-st** gives **-tst**; **t** with **-st** likewise gives **-tst**. Before third-singular **-ð**, the dental combination gives selected **-tt**. The documented third-singular spellings **rīt** and **wrīt** are also valid, though these models retain the selected double **t**. [2]

A3.

Verb	Present 2sg	Present 3sg	Preterite 2sg	Preterite 1/2/3pl
rīsan	rīst	rīst	rise	rison
snīðan	snīst	snīð	snide	snidon

In **snīðan**, **ð** changes to **d** in the plural-preterite stem and therefore in **snide** and **snidon**. The first/third singular **snāð** retains **ð**. This lexical alternation is distinct from the present ending combinations. **Rīsan** retains **s** in the forms shown. Documented third-singular **rīsð** and **snīðð** are valid alternatives to the selected forms. [2]

A4.

Person and number	Present	Preterite
1 sg.	wrēo	wrāh
2 sg.	wrīhst	wrige
3 sg.	wrīhð	wrāh
1–3 pl.	wrēoð	wrigon

The contracted first singular and plural are **wrēo** and **wrēoð**; do not append the ordinary **-e/-að** to them. Present **wrīhst/wrīhð**, preterite singular **wrāh**, and plural-based **wrige/wrigon** preserve their different vowels and **h/g** stems. [2]

A5.

Meaning	Preterite	Corresponding present
I rode / ride	Ic rād.	Ic rīde.
You, one person, rode / ride	Đū ride.	Đū rītst.
He rode / rides	Hē rād.	Hē rītt.
We rode / ride	Wē ridon.	Wē rīdað.

The second singular past uses **ride**, not **rād**. Present **rīt** is a valid alternative to selected third-singular **rītt**. The pronouns distinguish first and third singular where the past form coincides.

A6.

Subject	Present	Preterite
ic	drīfe	drāf
wē	drīfað	drifon
đū	drīfst	drife
hē	drīfð	drāf

Keep **wē** plural in both tenses. The change to the preterite does not change the subject's person or number, and the second singular requires the plural-based stem.

Class II

B1.

Person and number	Present	Preterite
1 sg.	bēode	bēad
2 sg.	bīetst	bude
3 sg.	bīett	bēad
1–3 pl.	bēodað	budon

The present second and third singular, **bīetst/bīett**, have **īe** where the infinitive citation has **ēo**. The other present persons retain **ēo**. The selected dental combination is **-tt**; **bīet** is a documented valid third-singular alternative. [3]

B2.

Present 1sg	Present 2sg	Present 3sg	Preterite 2sg	Preterite 1/2/3pl
būge	bȳgst	bȳgð	buge	bugon

Selected **būgan** has **ū → ȳ** in the present second and third singular, whereas **bēodan** has **ēo → īe**. The preterite plural-based **u** is short. **Bȳhst/bȳhð** are documented valid spellings beside selected **bȳgst/bȳgð**; the stated environment permits this **g/h** choice. [3]

B3.

Present 2sg	Present 3sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
cīest	cīest	cēas	cure	curon

The present and the first/third singular preterite retain **s**; the plural-preterite stem has **r**, including second-singular **cure**. Thus the second and third singular present coincide, but the singular and plural past stems differ. [3]

B4.

Verb	Present 2sg	Present 3sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
sēoðan	sīest	sīeð	sēað	sude	sudon
drēogan	drīegst	drīegð	drēag	druge	drugon

Sēoðan changes **ð** to **d** in its plural-based past forms. Its contracted present endings are separate from that alternation. **Drēogan** retains **g** throughout the selected row; **drīehst, drīehð** and singular preterite **drēah** are documented alternatives in their stated positions. Those alternatives do not replace every **g** in the paradigm. Both verbs select long **īe** in the present second/third singular and short **u** in the plural-based preterite. [3]

B5.

Person and number	Present	Preterite
1 sg.	tēo	tēah
2 sg.	tīehst	tuge
3 sg.	tīehð	tēah
1–3 pl.	tēoð	tugon

These are the Class II forms of **tēon**, "draw." Present **tēo/tēoð** are contracted. The preterite contrasts singular **tēah** with plural-based **tuge/tugon**; it does not retain the present vowel throughout. [3]

B6.

Verb	Present 1sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
wrēon	wrēo	wrāh	wrige	wrigon
tēon, draw	tēo	tēah	tuge	tugon

The shared contracted **-ēon** ending does not identify the strong class. Selected **wrēon** follows Class I, with singular past **ā** and plural-based **i**; **tēon** follows Class II, with **ēa** and **u**. Preserve the complete chosen stem series instead of combining one verb's present with the other's past pattern. [2, 3]

Class III

C1.

Person and number	Present	Preterite
1 sg.	binde	band
2 sg.	bintst	bunde
3 sg.	bint	band
1–3 pl.	bindað	bundon

In selected **bintst**, stem-final **d** combines with **-st** as **-tst**. In **bint**, **d + ð** gives the dental outcome written here with one **t**. Cook also records **bindest/bindst** and **bindeð/bindð**; these are valid alternatives, though the task requests the selected row. The past second singular **bunde** uses the **u** stem, not singular **band**. [4]

C2.

Verb	Present 2sg	Present 3sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
helpan	hilpst	hilpð	healp	hulpe	hulpon
gieldan	gieltst	gielt	geald	gulde	guldon

Helpan has present **e/i**, while **gieldan** has selected **ie** in these present forms. Both have short **ea** in the first/third singular preterite and short **u** in the plural-based forms. The dental contractions in **gieltst/gielt** belong to the present; keep **gulde/guldon** for the plural-based past. [4]

C3.

Verb	Present 2sg	Present 3sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
weorpan	wierpst	wierpð	wearp	wurpe	wurpon
berstan	bierst	bierst	bærst	burste	burston

The first/third preterite of **weorpan** has short **ea**. The metathesized **berst-** pattern has short **æ**, giving **bærst**. Both use short **u** for the plural-based preterite. The **ie** in **wierpst/wierpð/bierst** is short, unlike Class II **īe**. [4]

C4.

Person and number	Present	Preterite
1 sg.	weorðe	wearð
2 sg.	wierst	wurde
3 sg.	wierð	wearð
1–3 pl.	weorðað	wurdon

Ð appears in present **weorðe, wierð, weorðað** and first/third singular preterite **wearð**. The selected second-singular present **wierst** has no **ð**; retained **wierðst** is also valid. **D** occurs in preterite **wurde** and all three plural persons **wurdon**. The productive sense here is ordinary "become"; these forms do not by themselves teach a passive construction. [4]

C5.

Person and number	Present	Preterite
1 sg.	finde	fand
2 sg.	fintst	funde
3 sg.	fint	funde
1–3 pl.	findað	fundon

The selected usual third-singular preterite is **funde**; **fand** is also valid. Selected first singular is **fand**, but Wright also attests first-singular **funde**. A response using either documented alternative can be valid Old English while differing from the requested selected table. The second singular is **funde**, and all plural persons have **fundon**. [4]

For **winnan**:

Present 2sg	Present 3sg	Preterite 1/2/3pl
winst	winð	wunnon

The doubled **nn** of the present stem is reduced before the consonantal singular endings. It remains doubled in **wunnon**.

C6.

Verb	Present 2sg	Present 3sg	Preterite 1sg	Preterite 2sg	Preterite 1/2/3pl
drincan	drincst	drincð	dranc	drunce	druncon
singan	singst	singð	sang	sunge	sungon

Both belong to the nasal Class III family represented by **bindan**: present **i**, first/third singular preterite **a**, plural-based preterite **u**. The supplied participial stem likewise has **u**, but no participle recall or syntax is required here. [4]

C7.

Tōberstan, "break up; go to pieces":

Person and number	Present	Preterite
1 sg.	tōberste	tōbærst
2 sg.	tōbierst	tōburste
3 sg.	tōbierst	tōbærst
1–3 pl.	tōberstað	tōburston

It uses the **berstan** pattern: present **berst-/bierst-**, past singular **bærst-**, and plural-based **burst-**, with its own **tō-** retained.

Forweorðan, "perish":

Person and number	Present	Preterite
1 sg.	forweorðe	forwearð
2 sg.	forwierst	forwurde
3 sg.	forwierð	forwearð
1–3 pl.	forweorðað	forwurdon

It uses the **weorðan** pattern, including the **ð/d** alternation. **Forwierðst** is a valid alternative to selected **forwierst**. Both whole verbs have separately learned intransitive meanings. Recognizing their base patterns does not authorize attaching prefixes freely or guessing a whole verb's meaning from its parts. [4, 7]

C8.

Reference verb	Selected present 3sg	Selected preterite 1/2/3pl
bregdan	brītt	brugdon
fēolan	filhð	fulgon

Brītt shows loss of **g**, lengthening in the exceptional present stem, and the dental combination. The selected **brugdon** retains **g**. The alternatives **brīt** and preterite plural **brūdon** are documented; the latter belongs to the separately noted family with loss of **g** and lengthening.
Fēolan has a contracted present citation, short **i** with retained **h** in **filhð**, and **g** in plural preterite **fulgon**. Cook also gives plural **fælon**. Its complete reference table combines Cook's parts with the dictionary present entries and ordinary finite endings; it is not a verbatim full paradigm printed by Cook. The dictionary's **þ** in **filhþ** is explicitly represented by **ð** here. Cook's supplied participle **folen** remains distinct from Wright's **folgen/fōlen** alternatives. These are supported reference observations, not an unaided production demand. [4, 8]

Nouns

N1.

Case	scip singular	scip plural	wind singular	wind plural
Nominative	scip	scipu	wind	windas
Genitive	scipes	scipa	windes	winda
Dative	scipe	scipum	winde	windum
Accusative	scip	scipu	wind	windas

Scip is a short-stem neuter, with nominative/accusative plural **-u**. Its initial **sc** is an onset; it does not make the syllable heavy. Strong masculine **wind** has nominative/accusative plural **-as**. Neither noun should take the other's plural ending. [5]

N2.

Case	strand singular	strand plural	gefēra singular	gefēra plural
Nominative	strand	strandas	gefēra	gefēran
Genitive	strandes	stranda	gefēran	gefērena
Dative	strande	strandum	gefēran	gefērum
Accusative	strand	strandas	gefēran	gefēran

Gefēran can be genitive, dative or accusative singular, or nominative or accusative plural. Its spelling alone therefore fixes neither case nor number. Agreement and construction distinguish the possibilities. Nominative singular **gefēra**, genitive plural **gefērena** and dative plural **gefērum** remain distinct. [5]

N3.

Đā gefēran fundon twā scipu on ðǣm strande. Đæs gōdan mannes scip wæs lȳtel.

The companions are nominative plural; **twā scipu** is the accusative plural object. **On ðǣm strande** locates the ships/finding on the shore and has dative singular, not a newly introduced destination use. In the second sentence, **ðæs gōdan mannes** is the complete limiting genitive before **scip**. **Lȳtel** is the strong neuter nominative singular predicate agreeing with **scip**. A postposed genitive could be grammatical but would miss the requested position.

Uses and connected sentences

D1.

Đā gefēran cēosað ðæt lȳtle hof. Wē cēosað ðæt micle scip.

Both subjects are plural and require **cēosað**. The things chosen are accusative neuter singular; the adjectives are weak after **ðæt**. Preserve **micle**, with its shortened stem before the ending.

D2.

Se mann funde ðæs gōdan mannes scip. Hē band ðæt dēor.

Se mann is the finder and binder. **Đæs gōdan mannes** identifies the ship's owner and precedes **scip**, the accusative object. **Hē** continues the first man's reference; **ðæt dēor** is the singular accusative object of **band**.

Third-singular **fand** is a valid alternative to selected **funde**. Postposing the limiting genitive would miss this task's positioning request even if the sentence remained grammatical.

D3.

Wit druncon ðæt wæter, and git sungon wel.

Wit means "we two," and **git** means "you two." Both take plural verb forms: **druncon** is first person and **sungon** second person in these clauses. **Ðæt wæter** is accusative singular. Replacing either dual pronoun with an ordinary plural loses a requested distinction.

D4.

Ðā męnn bindað ðæt dēor. Ðā fuglas singað wel.

Only the subjects become plural: **męnn** and **fuglas**, with plural **bindað/singað**. **Ðæt dēor** remains the singular object. Its noun spelling alone could also occur in the plural, but the unchanged article **ðæt** marks the intended singular phrase.

D5.

Ic rād wīde and fand ān hof.

The shared subject **ic** governs both first-singular preterites. **Ān hof** remains the accusative object of "found"; **wīde** modifies the riding. **Funde** is a documented first-singular alternative to selected **fand**, so it is not inherently ungrammatical.

D6.

Hē singð wel, and se gefēra hīerð hine.

Hē is the singer, subject of **singð**. The different person **se gefēra** is the listener, subject of **hīerð**. Accusative singular **hine** refers to the singer: the companion hears him. Both clauses are present, but **singan** is strong and **hīeran** weak.

D7.

Se gefēra wearð glæd. Ðā gefēran weorðað glade.

The predicates agree with their subjects: **glæd** is strong masculine nominative singular; **glade** is strong masculine nominative plural. The subject's article does not make the separate predicate adjective weak. **Wearð/weorðað** mean "became/become"; there is no passive participle here. [6]

D8.

Ic healp ðæm ealdan męnn. Se ealda mann healp mē.

The person helped is dative in the taught construction: **ðæm ealdan męnn**, then **mē**. In the second clause, **se ealda mann** is nominative, the helper. **Healp** serves both first and third singular preterite. Genitive objects of **helpan** are also attested and can be grammatical, but do not meet this task's requested dative construction. [6]

D9.

Đā gefēran ne fundon ðæt scip. Ic ne cēose ðæt micle hof.

Ne immediately precedes each finite verb. The first clause is plural preterite, the second first-singular present. Negation does not change the accusative objects or license a weak dental past for the strong verb.

D10.

Đū ne drunce ðæt wæter. Gē drincað wæter.

The first subject is one addressee, with second-singular preterite **drunce**. The second subject is several addressees, with second-plural present **drincað**. The first object is definite "the water"; the second is simply "water."

Two companions choose a dwelling

L1.

Two companions rode far and wide. They found two dwellings. One dwelling was large, and one dwelling was small. They chose the small dwelling. They had food and water. They drank the water and rested in the small dwelling. One man said: "We two have a good dwelling. I sing, and you hear me."

The two companions remain the subjects of the riding, finding, choosing, having, drinking and resting. **Geręston hīe** can be rendered literally "rested themselves"; natural English "rested" preserves the meaning. The quoted **wit** includes the speaker and the other companion. **Ic singe** and **ðū hīerst mē** describe present actions: "I am singing, and you hear me" is also possible. Do not turn them into a command, obligation or future promise. This translation is independently prepared from the new Old English account.

L2.

Form in the account	Headword	Class	Person	Number	Tense
ridon	rīdan	I	Third	Plural	Preterite
fundon	findan	III	Third	Plural	Preterite
curon	cēosan	II	Third	Plural	Preterite
druncon	drincan	III	Third	Plural	Preterite
singe	singan	III	First	Singular	Present

All five are indicative. **Hæfdon, geręston, sægde, habbað** and **hīerst** belong to previously taught weak systems; **wæs** is the copula. They are not additional strong I–III forms merely because they occur in this account.

L3.

Plural form	Selected preterite 3sg	Preterite 2sg
ridon	rād	ride
fundon	funde	funde
curon	cēas	cure
druncon	dranc	drunce

The second singular consistently uses the plural-preterite stem with **-e**. **Findan** has the selected third-singular exception **funde**, identical here to the second singular; third-singular **fand** is also valid but differs from the selected target.

L4.

They choose the small dwelling, **ðæt lȳtle hof**. The man who speaks sings; the other companion hears that speaker.

Pronoun	Reference in the quotation
wit	The speaker and the other companion: “we two”
ic	The speaker, subject of “sing”
ðū	The other companion, subject of “hear”
mē	The speaker as the accusative object of “hear”

The first and second persons are determined by the quoted conversation, not by the preceding narrator's use of “they.”

L5.

Twēgen gefēran rīdað wīde. Hīe findað twā hofu. Ān hof is micel, and ān hof is lȳtel. Hīe cēosað ðæt lȳtle hof.

Rīdað, findað and **cēosað** are third-person plural present; each **is** is third-person singular present. The case relations and adjectives remain unchanged. In particular, **twā hofu** is still accusative plural, and **ðæt lȳtle hof** remains the definite singular object.

L6.

Wē habbað gōd hof. Wē singað, and gē hīerað ūs.

Wē denotes the group of speakers, **gē** the other group addressed, and accusative **ūs** the speakers as the people heard. The three verbs are plural present. The requested groups call for ordinary plural pronouns, not the earlier two-person **wit**.

The shipwreck and the survivor

R1.

In addition to that, northeast winds came, and the fierce southwest wind stood against them, and the whole ship broke apart in this terrible storm. Apollonius's companions all perished, and Apollonius alone came by swimming to Pentapolis, the Cyrenian land, and there he came up on the shore.

"Opposed them" is a natural rendering of **him ongēan stōd**. The local help guides **him** toward the northeast winds, but the spelling alone does not force that antecedent or exclude a singular referent. A justified contextual alternative should not be rejected merely because **him** can also be singular. **Forwurdon tō dēaðe** states that the companions died: literal "perished to death" can be compressed to "perished." In contrast, Apollonius reaches land alive and alone. English "but" may make the contrast explicit where the source uses **and**. "Swam to Pentapolis" and "came ashore there" are defensible idiomatic renderings of the supplied phrases; they do not change the source's noun **sunde** or dative **strande**. Preserve the entire outcome, rather than stopping at the ship's breakup.

This translation is independently prepared from the exact Old English passage. The four supplied later-system preterites and local phrase notes may be consulted; their independent recall is not required. [7]

R2.

Form	Whole headword	Class	Person and number	Tense and mood	Subject
tōbærst	tōberstan	III	Third singular	Preterite indicative	ðæt scip eall, the whole ship
forwurdon	forweorðan	III	Third plural	Preterite indicative	Apollonius gefēran ealle, all Apollonius's companions

The ship "broke apart"; the companions "perished." Neither clause has a direct object. Give the whole prefixed headword, preserving its separately learned meaning.

R3.

The first **Apollonius**, before **gefēran**, is genitive: "Apollonius's companions." Cook's proper-name note explicitly identifies that case. The second **Apollonius**, before **āna becōm**, is nominative: Apollonius is the survivor who reached land.

Gefēran is the nominative plural head of the first subject phrase, with plural **ealle** and **forwurdon**. The singular possessor does not determine the verb's number. **Gefēran** alone could represent several other case/number combinations; the clause and agreement identify this one. A foreign name's apparent Latin ending is not a reliable substitute for that analysis. [7]

R4.

Noun	Case and number here	Clause function
windas	Nominative plural	Subject of cōmon
wind	Nominative singular	Head of the subject of stōd
scip	Nominative singular	Subject of tōbærst
gefēran	Nominative plural	Subject of forwurdon, modified by genitive Apollonius
strande	Dative singular	In supplied on ðǣm strande

Windas follows **cōmon** but remains its subject. **Scip** has identical nominative and accusative singular spelling, and **gefēran** is also syncretic; construction and agreement resolve their roles. **Strande** remains dative as printed even when English naturally says "came ashore."

R5.

He reaches Pentapolis, the Cyrenian land, **by swimming**, and the passage leaves him **on the shore**. The supplied **mid sunde** expresses the means; **sunde** is a dative noun, not an infinitive.

Āna means "alone": Apollonius survives without the companions, who have all perished. It is the supplied weak masculine nominative singular form in this particular sense, not simply a count of "one Apollonius."

Cumulative review

X1.

Corrected clause	Diagnosis
Đū drife.	Second-singular preterite needs the plural-based stem plus -e. Drāf is first/third singular.
Hīe curon ðæt scip.	Third-plural preterite needs curon, with u and r, rather than singular cēas.
Se mann bint ðæt dēor.	The singular subject needs third-singular present bint, not plural bindað.

The two first clauses stay past, and the third stays present. Documented **bindeð/bindð** are valid alternatives to the selected correction **bint**.

X2.

One model:

Twēgen gefēran ridon. Hīe fundon twā scipu. Hīe curon ðæt lȳtle scip. Hīe druncon wæter.

Essential meaning: the same two companions rode, found two ships, chose the small ship, and drank water, in that order. All four actions are narrated with plural preterites. **Twā scipu** is accusative plural; **ðæt lȳtle scip** is accusative singular with the weak adjective after the article.

This is an open composition. Repeating the subject noun phrase instead of using **hīe**, or choosing another clear word order within the taught constructions, is acceptable. Require the four connected past actions, two consistent subjects and the stated objects, not one mandatory string. A singular verb, a present verb, or the choice of both ships would change a requested meaning.

X3.

Se ealda gefēra hilpð mīnum fuglum. Mīne fuglas singað wel. Wē fundon his lȳtel scip on ðǣm strande.

The old companion is the helper, with singular **hilpð**. **Mīnum fuglum** is dative plural, the birds helped; **mīne fuglas** is nominative plural, the singers. Both possessives mean that the birds belong to the speaker, while their endings agree with the birds' cases and number. **Wē** identifies the plural finders.

His here identifies a male owner, naturally the old companion in this connected context; it does not agree with the neuter noun **scip**. An independently established different male referent would also be possible. Selected **lȳtel** is strong accusative neuter singular; weak **lȳtle** after the possessive is a valid alternative. **On ðǣm strande** locates the finding/ship on the shore.

The model uses the taught dative **helpan** construction. A documented genitive construction can be valid Old English, though outside this unit's selected dative practice. The bird application is new teaching material, not a quotation of the dictionary's human example. [6]

X4.

Clause	Analysis	Meaning
Hē funde.	Third-person singular preterite indicative	He found.
Đū funde.	Second-person singular preterite indicative	You, one person, found.
Hīe fundon.	Third-person plural preterite indicative	They found.

Funde versus **fundon** distinguishes singular from plural in these clauses. The identical singular finite form does not distinguish the two persons: **hē** marks third person and **ðū** second person. The additional documented first-singular use of **funde** reinforces the point that the form alone does not identify a unique person. **Fundon** likewise admits all three plural persons, with **hīe** selecting the third here.

Source notes

[1] Cook, **A First Book in Old English**, second edition (1895), §§92–95, printed pp.54–55 / PDF70–71: four stems, finite indicative endings, the plural-based second-singular preterite and the special word-order condition for present plural **-e**. The ordinary subject-before-verb models here retain **-að** where prescribed.

[2] Cook §§101–102, printed pp.58–60 / PDF74–76, with consonant rules §§28–37, pp.22–25 / PDF38–41. Wright and Wright, **Old English Grammar**, second edition (1914), §§491–492, p.255 / PDF275, corroborates the Class I stem relationships and contractions.

[3] Cook §103, printed pp.60–61 / PDF76–77. Wright §§493–496, pp.256–257 / PDF276–277, records the Class II alternatives. Cook also permits **ī** for **īe**; the models keep the selected **īe** spellings.

[4] Cook §104, printed pp.61–63 / PDF77–79. Wright §§497–502, pp.257–259 / PDF277–279, supplies the cited exceptional variants, including first-singular **funde**. A rule-derived finite cell is not a claim that every cell is individually printed in a source.

[5] Cook §§43, 47, 53, printed pp.28, 32, 37 / PDF44, 48, 53; dictionary entries **scip**, p.311 / PDF327, **wind**, p.322 / PDF338, **strand**, p.314 / PDF330, and **ge-fēra**, p.291 / PDF307. The full noun tables apply these class patterns to the checked lexical entries.

[6] Cook §150, printed p.88 / PDF104, and §168, p.96 / PDF112, on predicate agreement and accusative objects. Bosworth–Toller, main dictionary (1898), **helpan**, p.527b, explicitly admits genitive or dative government; its dative human examples support the selected construction, with birds a declared new application. The other lexical frames are individually sourced in the lesson's evidence, not inferred from membership in a strong class.

[7] Cook, Reader XII, **Apollonius of Tyre**, "The Shipwreck," printed pp.165–166 / PDF181–182, from p.165 editorial body line6 through p.166 line4, stopping at the first **on ðæm strande.** The editorial line numbers expand the printed five-line intervals. Relevant source notes are p.165 n.7 and p.166 nn.1–3; the latter identify the genitive proper name, **forweorðan**, and §79 for **āna**. The preceding storm supplies the initial connective's context. Dictionary **for-weorðan**, p.288 / PDF304, and **tō-berstan**, p.316 / PDF332, support the whole prefixed senses.

[8] The **fēolan** reference combines Cook §104 with Bosworth–Toller main dictionary p.275a (**felgan**, present **filhst/filhþ**) and Toller Supplement (1921) p.211b, which transfers the cited passages to **fēolan**. **Þ → ð** is a declared spelling normalization. The complete table is a synthesis using ordinary endings, not an individually attested twelve-cell paradigm. Cook's **folen** and Wright's **folgen/fōlen** remain separately identified.

UNIT 5

Answer key

Using the key

The models use the lesson's selected forms. In a form exercise, the target is the stated verb, tense, person and number; a documented variant can be valid Old English while differing from the selected table. In a translation, preserve the people, number, tense, objects, possessors and other stated relations. Word order may vary when those relations remain clear. The notes identify the main targets and likely errors; they do not make each model the only acceptable string.

The present second and third singular often change the stem vowel or consonants. The preterite second singular uses the plural-preterite stem plus **-e**; all three plural persons use **-on**. A dual subject also takes a plural verb. Preserve quantity: **æ/ǣ**, **ea/ēa**, **ie/īe** and **e/ē** are not interchangeable. All requested finite forms below are indicative. [1]

Infinitives and participles printed in four-part entries remain supplied citations. Identifying a citation does not require producing an infinitive clause, perfect or passive. Likewise, the reading's local help remains available for wishes, naming, relative and content clauses, passive or resultative phrases, and the other supplied uses. Exercise I.5.6 supplies its whole **eall ðā ðing** phrase; no independent quantifier production is required.

Both **sēon/gesēon** are separately taught for ordinary seeing, and both **scieppan/gescieppan** for creating. Either member can satisfy an unqualified English prompt in the appropriate finite form. A task that explicitly names one verb still has that lexical target. These checked pairs do not authorize arbitrary prefix addition or removal. The answers and translations are newly prepared teaching models, not a transcription of Cook's answer key.

Principal parts

P1.

Position	Form	Function in the entry
First	beran	Infinitive citation
Second	bær	Preterite singular principal part: first or third person
Third	bǣron	Preterite plural principal part: first, second or third person
Fourth	boren	Past participle citation

Bær and **bǣron** are finite indicative forms. **Beran** and **boren** are nonfinite citations and do not specify indicative person and number. The entry distinguishes the singular and plural past stems; neither the infinitive ending **-an** nor participial **-en** is another personal ending. [1]

P2.

Geaf, from **giefan**, is strong Class V: the preterite is marked by the changed stem vowel, without a dental preterite suffix. **Sealde**, from **sęllan**, is weak: it contains the dental preterite marker **-d-**. Each can be first- or third-person singular preterite indicative when given without a subject. Their common English meaning, "gave," does not determine their conjugation.

P3.

Subject	Preterite form
I	bær
You, singular	bǣre
He	bær
We	bǣron

Bǣre and **bǣron** use the plural-preterite stem **bǣr-**. First and third singular use short **æ** in **bær**. A second-singular answer made from that short-vowel stem misses both the required stem and the distinction in quantity.

P4.

"You, singular, created" is **gescēope**; "we created" is **gescēopon**. Both use the supplied plural stem **gescēop-**, with **-e** and **-on** respectively. **Gesceapen** is the supplied past participle, not a finite preterite. Its final **-en** does not identify a plural subject.

The separately documented **ō** series is valid, but this task asks the learner to use the printed **ēo** entry. Its nonfinite citations may remain in view. [4]

Finite forms

For F1–F24, each table gives exactly the requested cells. The explanation identifies the relevant stem or ending; the shared notes above apply to all rows. A response in another person, number or tense changes the requested grammatical meaning even when it is a valid form elsewhere in the paradigm.

F1.

Present 2sg	Preterite 1sg	Preterite 2sg
birst	bær	bǣre

The present has selected **i**; **bierst** is a documented alternative. The past second singular has long **ǣ**, unlike first-singular **bær**. [2]

F2.

Present 3sg	Preterite 3sg	Preterite 1pl
nimð	nōm	nōmon

The selected past has long **ō** in both singular and plural. It does not use the ordinary **bær/bǣron** vowel series. Documented **nam/nāmon** belong to an alternative past series and differ from the selected target. [2]

F3.

Present 1sg	Present 2sg	Present 3sg	Preterite 3pl
cume	cymst	cymð	cōmon

Present **u** becomes **y** in the second and third singular. The preterite has long **ō**. **Cwōmon** is a documented alternative to selected **cōmon**; it is not a reason to insert **w** in every form. [2]

F4.

Present 2sg	Present 3sg	Preterite 2sg
spricst	spricð	sprǣce

The present second and third singular have **i**. The past second singular uses the long-**ǣ** plural stem, not the short-**æ** singular principal part **spræc**. [3]

F5.

Present 2sg	Present 3sg	Preterite 3pl
cwist	cwið	cwǣdon

The second-singular present loses stem **ð** before **-st**. The plural preterite has **d**, together with long **ǣ**. Do not carry the first/third-singular **cwæð** stem unchanged into the plural. [3]

F6.

Present 2sg	**Present 3sg**	**Preterite 1sg**	**Preterite 1pl**
giefst	giefð	geaf	gēafon

The selected present retains **ie**. Short **ea** in singular **geaf** contrasts with long **ēa** in plural **gēafon**; the **g**-initial spelling does not remove that quantity distinction. [3]

F7.

Present 1sg	**Present 3sg**	**Preterite 2sg**
bidde	bitt	bǣde

The first singular preserves **dd**. The third singular has the selected dental outcome **tt**; documented **bit** is also valid. Past **bǣde** uses the long-**ǣ** stem and is strong, despite its stem-final **d**. [3]

F8.

Present 2sg	**Present 3sg**	**Preterite 1pl**
ligst	ligð	lǣgon

The selected present has **g**, not the **cg** of the citation **licgan**. Cook's **līst/līð** are documented contracted alternatives, with long **ī**. Wright also records past plural **lāgon**; the selected table uses **lǣgon**. [3]

F9.

Present 3sg	**Preterite 1sg**	**Preterite 2sg**
sitt	sæt	sǣte

Present **sit** is a documented alternative to selected **sitt**. The past first singular has short **æ**; second-singular **sǣte** uses the plural stem with long **ǣ**. [3]

F10.

Present 2sg	**Present 3sg**	**Preterite 1sg**	**Preterite 2sg**
itst	itt	ǣt	ǣte

The present has **i** and dental combinations. Selected past **ǣt** is long even in the singular; do not impose the short-vowel pattern of **sæt** on this verb. Short **æt** and third-singular present **it** are documented alternatives in their respective positions. [3]

F11.

Present 1sg	**Present 2sg**	**Present 3pl**
sēo	siehst	sēoð

The contracted first singular and plural have **ēo**, without an added ordinary **-e/-að**. Second-singular **siehst** has short **ie**. Long **īe** would confuse this selected seeing system with a different vowel pattern. [3]

F12.

Present 3sg	**Preterite 2sg**	**Preterite 2pl**
gesiehð	gesāwe	gesāwon

Present **ie** is short. The plural-based past has long **ā** and **w**; **geseah** is the first/third singular past and does not supply the requested second-singular stem. Keep the separately learned **ge-** of the named verb. [3]

F13.

Present 2sg	**Present 3sg**	**Preterite 1pl**
færst	færð	fōron

The present singular mutation is **a → æ**. Class VI past **ō** is long and is shared by the singular and plural past stems. [4]

F14.

Present 1sg	**Present 2sg**	**Present 2pl**	**Preterite 2sg**
slēa	sliehst	slēað	slōge

The contracted present first singular is **slēa**, and the plural is **slēað**. **Sliehst** has short **ie** and **h**; plural-based past **slōge** has long **ō** and **g**. The documented first/third-singular past alternative **slōh** does not replace the required **g** in this second singular. [4]

F15.

Present 2sg	**Present 3sg**	**Preterite 3sg**
stęntst	stęnt	stōd

The present singular has mutated **ę** and the dental combinations **-tst/-t**. The past loses **n** and has long **ō**: **stōd**. Adding a weak dental suffix to **stand-** would not produce this strong preterite. [4]

F16.

Present 1sg	**Present 3sg**	**Preterite 1pl**
hębbe	hęfð	hōfon

The present alternates **bb** with **f** before the selected third-singular ending. The past uses **hōf-**, not the present vowel or doubled consonant. [4]

F17.

Verb	Present 1sg	Present 2sg	Preterite 3sg	Preterite 3pl
scieppan	scieppe	sciepst	scēop	—
gescieppan	—	—	—	gescēopon

The doubled **pp** remains before the vowel ending in **scieppe** but is reduced before **-st**. Selected past **ēo** is long. Cook also records **scōp/scōpon**; the corresponding prefixed **gescōp/gescōpon** series is a documented grammatical expansion. These are valid alternatives, while the task selects the **ēo** series. The dashes mark cells not requested here. [4]

F18.

Present 1sg	Present 2sg	Present 3sg	Preterite 2sg
swęrie	swęrest	swęreð	swōre

The present follows the explicitly taught **-ie/-est/-eð** pattern; it is not made by keeping **-i-** before every ending. The preterite is strong, with **swōr-** and second-singular **-e**, not a weak dental past. [4]

F19.

Verb	Present 3sg	Preterite 1pl
feallan	fielð	—
healdan	hielt	—
weaxan	wiext	wēoxon

All three present forms have short **ie** from short **ea**. **Fielð** reduces doubled **ll**; **hielt** has the dental outcome; **wiext** combines stem **x** with the ending as **xt**. The past **ēo** of **wēoxon** is long. [5]

F20.

Verb	Present 2sg	Preterite 2sg
cnāwan	cnǣwst	cnēowe
wēpan	wēpst	wēope

Cnāwan changes present **ā** to **ǣ** in the requested present singular. **Wēpan** already has **ē** in the present; do not manufacture an additional changed vowel there. Both requested preterites use **ēo** plus the second-singular **-e**. [5]

F21.

Verb	Present 2sg	Preterite 2sg
hēawan	hīewst	hēowe
flōwan	flēwst	flēowe

Long present **ēa → īe** in **hīewst** contrasts with **ō → ē** in **flēwst**. Both past forms have long **ēo**. Shortening **īe** in **hīewst** would erase the quantity distinction taught with these present changes. [5]

F22.

Verb	Present 3sg	Preterite 2sg
lǣtan	lǣtt	—
hātan	hǣtt	—
fōn	fēhð	fēnge

Selected **lǣtt/hǣtt** have the double dental; **lǣt/hǣt** are documented alternatives. **Hǣtt** belongs to the active indicative and is not the separate **hātte** system. Contracted **fōn** has present **h** and plural-based past **ng**: **fēnge**. [5]

F23.

Verb	Present 3sg	Preterite 2sg
geswīcan	geswīcð	geswice
scīnan	scīnð	scine

These Class I verbs keep long **ī** in the present but use short **i** in the plural-based past. **Geswāc/scān** are first/third singular past forms, not second singular. Learning an earlier class pattern did not make these new lexical forms previously taught. [6]

F24.

Verb	Present 3sg	Preterite 3pl
flēogan	flīehð	flugon
swimman	swimð	swummon

Class II **flēogan** has long **īe** in the selected present singular and short **u** in the plural past. **Flīegð** is a documented present alternative. Class III **swimman** reduces **mm** before the present consonantal ending, but preserves it in plural past **swummon**. The documented **swommon** alternative differs from the selected **a/u** past series. [6]

Clauses

C1.

Đū birst ðone męte, and ic nime ðone fisc.

The first subject is one addressee, with second-singular **birst**; the second is the speaker, with first-singular **nime**. Food and fish are accusative masculine singular. **Bierst** is a documented alternative to **birst**. Plural verbs would change the requested subjects, and a dative object would miss the taught carry/take constructions. [7]

C2.

Wit gēafon ðǣm mannum uncerne męte.

Wit and **uncerne** both preserve "us two." The dual subject takes plural **gēafon**. **Ðǣm mannum** is the dative plural recipient; **uncerne męte** is the accusative masculine singular food given. The possessive ending agrees with **męte**, while its stem identifies the two possessors. Ordinary **wē** or **ūre** would lose the specified dual meaning. A grammatical sentence with **sęllan** would also miss the explicit **giefan** target. [7]

C3.

Đā gefēran sǣton on ðǣm hofe, and se mann stōd on ðǣm strande.

The companions are plural and require **sǣton**; the man is singular and requires **stōd**. Both phrases with **on** locate the posture and take the dative. They do not describe movement into the dwelling or toward the shore. **Stōd** here means ordinary "stood"; the earlier reading's opposition sense is not needed. [7]

C4.

Ic ne æt ðone męte; ðū æte hine.

First-singular **æt** contrasts with second-singular **æte**. Only the first clause is negated. **Hine** is accusative masculine singular, referring to masculine **męte**; English "it" does not automatically require Old English neuter **hit**. Repeating **ðone męte** can preserve the reference, but the pronoun model demonstrates its agreement. Short singular **æt** is a documented alternative to selected **æt** in the first clause. [3, 7]

C5.

Hīe gesāwon ðā fuglas and nōmon ðā fiscas.

The plural subject controls both plural preterites. Both objects also become plural: **fuglas** and **fiscas**, each with accusative plural **ðā**. Changing only the verbs, or only the nouns, leaves part of the requested transformation undone. The model retains the original **gesēon** and the selected **nōm/nōmon** series; documented **nāmon** is a valid alternative past of **niman**.

C6.
Se mann cwið: “Ic sēo ðā trēowu.”
Cwið is third-singular present, governed by **se mann**. Inside the quotation, **ic** is the man speaking and **sēo** is first-singular present; **ðā trēowu** is accusative plural. **Gesēo** is an equally acceptable separately taught seeing verb here. A past “said/saw” changes the specified tense. The task requires direct speech introduced by **cweðan**, not a newly formed indirect-speech construction. [7]

C7.
Gē geswīcað ēowres weorces.
Gē and **geswīcað** are second-person plural. **Geswīcan** governs the genitive of the activity ceased from: **weorces**. The agreeing possessive **ēowres** is genitive neuter singular and identifies plural addressees as possessors. English “from” is expressed by this genitive construction, without adding **fram**. [8]

C8.
Đæt trēo fielð, and ðā męnn healdað ðæt scip.
The singular tree is the subject of intransitive **fielð**. The plural men are the subject of **healdað**, and the singular ship is its accusative object. Although **scip** has identical nominative and accusative singular spelling, its role here is determined by the clause. A plural ship phrase or a singular holding verb would change the requested relations. [7]

Cook, Group I, Exercise 5

The English prompts below retain Cook's wording and original item numbers, printed p.3 / PDF11. The common target is a complete translation with the correct finite tense and agreement, noun and adjective cases, and stated lexical relations. The models use the selected forms; the notes distinguish any narrower taught target from other valid language. The source has no attached item notes. [9]
I.5.1.
God created the heavens and the earth.
God gescēop ðā heofonas and ðā eorðan.
God governs singular preterite **gescēop**. **Heofonas** is accusative masculine plural; **eorðan** is accusative feminine singular. Their articles happen to share the spelling **ðā**. **Scēop** is also acceptable, and the documented **gescōp/scōp** alternatives retain the creation meaning. The reading's weak-feminine singular **heofonan** does not preserve this English prompt's plural “heavens.”

I.5.2.
God made two great lights.
God geworhte twā miclu lēoht.
The object is accusative neuter plural: **twā**, strong **miclu**, and **lēoht**. **Lēoht** does not gain a plural **-as** or **-u** in its selected long-stem neuter paradigm. The numeral does not by itself require a weak adjective. **Geworhte** is the already taught weak preterite of **gewyrcean**.

I.5.3.
God made the firmament.
God geworhte ðā fæstnesse.
Ðā fæstnesse is accusative feminine singular, the thing made. The finite verb is third-singular preterite. Its dental past formation remains weak even though this unit chiefly introduces strong systems.

I.5.4.
God created the great whales.
God gescēop ðā miclan hwalas.
The object is accusative masculine plural. **Miclan** is weak after **ðā**, and **hwalas** has the selected plural stem **hwal-**, not singular **hwæl-**. **Scēop** and the documented **ō**-series creation forms are valid alternatives in this unqualified English prompt. A plural verb would incorrectly agree with the object instead of **God**.

I.5.5.
He made the beasts of the earth.
Hē geworhte ðā dēor ðære eorðan.
Ðā dēor is accusative neuter plural. **Ðære eorðan** is the dependent genitive singular, "of the earth." The spelling **dēor** is the same in singular and plural, so the article and intended meaning matter. The limiting genitive may instead precede its head: **Hē geworhte ðære eorðan dēor.** Both arrangements preserve the relation.

I.5.6.
He saw all those things.
Hē geseah eall ðā ðing.
The independent target is the subject and third-singular preterite seeing form. **Seah** is also acceptable. The complete accusative plural phrase **eall ðā ðing** is supplied and may be copied; do not require the learner to reconstruct its quantifier syntax or endings from memory. Present **gesēo/gesiehð** would miss "saw."

I.5.7.
He finished his work.
Hē gefylde his weorc.
Gefylde is third-singular weak preterite of **gefyllan**, in its taught finish/accomplish sense. **Weorc** is accusative neuter singular. **His** identifies a male possessor and does not acquire a neuter accusative ending; the natural reference is the subject, though a context could identify another male owner.

I.5.8.
He blesses the seventh day.
Hē geblētsað ðone seofoðan dæg.
Geblētsað is the taught weak Class II third-singular present; its **-að** does not make it plural in this system. **Ðone seofoðan dæg** is accusative masculine singular, with the weak ordinal after the article. A preterite would change "blesses" to "blessed."

I.5.9.
The man ceases from his work.
Se mann geswīcð his weorces.
Geswīcð is third-singular present. **Weorces** is genitive under **geswīcan**, and **his** remains invariant. Do not substitute the past **geswāc**, or add a preposition merely because English has "from." [8]

I.5.10.
I see the bird in the tree.
Ic gesēo ðone fugol on ðǣm trēowe.
Sēo is also acceptable for the first-singular present. The bird is accusative masculine singular; the location phrase has dative neuter singular **ðǣm trēowe**. The noun's selected dative retains **w** and **-e**. There is no motion into the tree.

I.5.11.
They saw the fish in the water.
Two equally valid number choices are:

Fish understood as	Model
Singular	Hīe gesāwon ðone fisc on ðǣm wætere.
Plural	Hīe gesāwon ðā fiscas on ðǣm wætere.

English **fish** does not settle the object's number, and Cook supplies no note restricting it. Both **ðone fisc** and **ðā fiscas** meet the prompt. **Sāwon** is also acceptable in either model. The subject **they** requires plural **hīe** and a plural preterite; object-number freedom does not permit singular **geseah/seah**. The water phrase is dative location.

I.5.12.
The birds of the air fly.
Đæs lyftes fuglas flēogað.
Fuglas is nominative plural and controls present **flēogað**. **Đæs lyftes** is genitive singular of the selected neuter **lyft**, identifying the birds as "of the air." **Đā fuglas ðæs lyftes flēogað** also preserves the relation. The genitive is not an object of "fly"; this is ordinary intransitive winged flying. [7]

I.5.13.
The trees grew.
Đā trēowu wēoxon.
The trees are nominative neuter plural, with the selected **trēowu**. **Wēoxon** is third-plural preterite of the taught growth verb **weaxan**, with long **ēo**. Present **weaxað** or singular past **wēox** misses a requested distinction. Cook also lists **grōwan** and explicitly assigns it the **flōwan** pattern, giving the valid alternative **grēowon** by that pattern. Its full system is not an independent-recall requirement here. It differs from the selected **weaxan** practice target, not from the English meaning. [5, 9]

I.5.14.
The stars shone.
Đā steorran scinon.
Weak masculine **steorran** is nominative plural here, and **scinon** is third-plural preterite with short **i**. Present **scīnað** has long **ī**; singular past **scān** has long **ā**. The target is literal shining, not a new figurative sense.

I.5.15.
The fish swims.
Se fisc swimð.
Here English **swims** fixes the subject as singular. **Se fisc** is nominative masculine singular and controls third-singular **swimð**, with reduced **m** before the ending. The ambiguity allowed for the object in I.5.11 does not apply here.

I.5.16.
The men swam.
Đā męnn swummon.
Męnn is the nominative plural of **mann**. The plural preterite **swummon** retains doubled **mm** and has **u**; singular **swamm** and present **swimmað** miss the target. Documented **swommon** is a valid alternative past form, distinguished from the lesson's selected **a/u** series. [6]

Food for the companions and the birds

T1.

One man gave his food to the birds. The birds ate and flew.

Đǣm fuglum identifies the dative plural recipients of **geaf**. In the next sentence, nominative **ðā fuglas** is the subject of both **ǣton** and **flugon**. "Flew away" is a possible contextual inference, but the text only states that they flew; departure is not a required detail. Giving food to the companions belongs to the earlier action by the men.

T2.

Phrase	Case and number	Function
ðǣm gefērum	Dative plural	Recipients: the companions
ðone męte	Accusative singular	Thing given: the food
ðā męnn	Nominative plural	Subject of gēafon: the men

Gēafon agrees with the plural men who give. The recipients' plurality does not control its agreement; they are dative. English "gave the companions the food" and "gave the food to the companions" express the same relations. [7]

T3.

Se mann sitt on ðǣm strande and gesiehð ðā fiscas. Đā fiscas swimmað on ðǣm wætere.

Singular past **sæt/geseah** becomes present **sitt/gesiehð**; plural past **swummon** becomes **swimmað**. The man remains the subject of both sitting and seeing. The fish remain the accusative plural object in the first sentence and the nominative plural subject in the second. Both location phrases retain the dative. Documented **sit** is also valid for the first verb; the model retains the account's **gesēon**.

T4.

Two men carried food. Their companions sat in the dwelling. The men gave the companions the food, and they ate. One man did not eat. He gave his food to the birds. The birds ate and flew. The man sat on the shore and saw the fish. The fish swam in the water.

This translation is independently prepared from the complete new Old English account. **Hiera** refers naturally to the two men as possessors of the companions, and **his męte** to the later man's food or share. In **and hīe ǣton**, the companions are the natural intended eaters, but the pronoun's form does not uniquely distinguish them from the men. Retain “they,” or accept a coherent contextual interpretation; do not require a uniquely determined antecedent. **Ān mann** likewise does not explicitly state whether the man belongs to the first pair or the companions.

The verbs report past actions; “were sitting” or “were swimming” may be natural English renderings in context. **Etan** is used without an expressed object in the eating clauses, a taught use. The food's kind and the birds' destination are not specified. Unlike the unqualified English **fish** in Cook I.5.11, the account's **ðā fiscas** is explicitly plural in both occurrences. Preserve that number and the contrast between the man who did not eat and the birds who did. [7]

Creation: first-day revisit

R1.

Source form	Lemma	Strong class	Tense, person and number in the passage
gescēop	gescieppan	VI	Preterite, third singular
cwæð	cweðan	V	Preterite, third singular
geseah	gesēon	V	Preterite, third singular
hēt	hātan	VII	Preterite, third singular

All four are indicative. The first three have **God** as their stated subject. **Hēt** continues the same divine subject, understood from the preceding clauses; the light is what God names, not the namer. The bare verb spellings can also serve first-person singular elsewhere, but the passage fixes the person here. The naming construction remains supplied. [10]

R2.

The ordinary taught meaning of **weorðan** is “become.” In the supplied **wearð geworht**, it combines with the participle to express “was made” or “came to be made.” **Wearð** is the finite word: third-person singular preterite indicative of **weorðan**. **Geworht** is the supplied past participle of **gewyrcean**.

Recognizing the finite form is learned knowledge; forming a passive independently is not required. Do not parse **geworht** as a second finite preterite or translate the phrase as an active “made” with light as the maker. [10]

R3.

Expression	**Noun and gender**	**Number and case here**
Source heofonan	heofone, weak feminine	Accusative singular: heaven
Exercise heavens: heofonas	heofon, strong masculine	Accusative plural: heavens

The source's **-an** belongs to a weak feminine singular form; it is not evidence for a plural “heavens” in that clause. The exercise calls for the already taught masculine plural. Both nouns refer to heaven, but their gender, inflection and number must be kept distinct. The source note supplies **heofone**; no new complete productive paradigm of that noun is required. [10]

R4.

In the beginning God created heaven and earth. Now the earth was empty and void; and darkness was over the surface of the deep; and God's spirit was borne over the waters. God then said, “Let light come to be”; and light was made. God then saw that it was good; and he separated the light from the darkness. And he called the light Day, and the darkness Night. Then evening and morning had come to be—one day.

This translation is prepared from all 69 words of the unchanged first-day passage. **Heaven** preserves source singular **heofonan**. “Now” renders connective **sōðlice** in context, following Cook's **autem** note; “indeed” is also defensible if the connection remains clear. “The expanse of the deep” is a more literal alternative to “the surface of the deep.” **Wæs geferęd** is the supplied “was carried/borne”; natural contextual “moved over” can convey the scene without changing God's spirit into the waters.

The quotation expresses the supplied wish, “Let there be light” or “Let light come to be.” The following **wearð geworht** says that light was made. **Hit** in the content clause refers to the light God saw to be good. Preserve the separation and both names; do not stop at the making of light. The closing formula may be rendered “there came to be evening and morning—one day.” **Ān** says “one,” not the ordinal “first.” The whole closing construction remains supported, so a unique subject/predicate analysis of it is not a grading requirement. [10]

Creation: second day

R5.

Source form	Lemma	Formation	Person, number and tense here
cwæð	cweðan	Strong V	Third singular preterite
hēt	hātan	Strong VII	Third singular preterite
geworhte	gewyrcean	Weak	Third singular preterite
tōtwǣmde	tōtwǣman	Weak; supplied source form	Third singular preterite

All are indicative and share **God** as their subject. In coordinated **and tōtwǣmde**, God remains understood as the separator. **Cwæð/hēt** use strong past stems; **geworhte/tōtwǣmde** contain dental preterite formations. The **ð** in **cwæð** is part of its strong stem, not a weak preterite suffix. **Tōtwǣmde** may be identified from the local help; its full conjugation is not an independent production requirement. [10]

R6.
God separates the waters **under the firmament** from those **above the firmament**. In **fram ðǣm ðe wǣron bufan ðære fæstnesse**, **ðǣm** is dative plural, "those," with waters understood. It is used substantivally rather than as an article followed by an expressed noun.
Both relative **ðe** occurrences are subjects of their own **wǣron** clauses: the respective waters "were under" and "were above." They are not direct objects within those relative clauses. The surrounding verb has the first group as what is separated and **fram** introduces the group separated from. The local help supplies these constructions; independent formation of relative clauses is not tested. [10]

R7.
God calls the firmament **Heaven**, source **Heofonan**. The supplied naming construction places both the named thing, **ðā fæstnesse**, and the name, **Heofonan**, in the accusative. **Heofonan** is again weak feminine singular, not a plural ending.
In **ōðer dæg**, **ōðer** is masculine nominative singular, agreeing with masculine nominative singular **dæg**: "a second day." The previously taught ordinal **ōðer** has this strong form. The larger evening-and-morning formula remains supplied; agreement within **ōðer dæg** does not require choosing one general clause analysis for the whole formula. [10]

R8.

God then said again, “Let a firmament now come to be in the midst of the waters, and let it separate the waters from the waters.” And God made the firmament, and separated the waters which were under the firmament from those which were above the firmament; it was then done so. And God called the firmament Heaven. And then evening and morning had come to be—a second day.

This translation is independently prepared from all 58 words of the second day. “God then also said” is a defensible alternative because Cook's note glosses **ęft** with **quoque**. Preserve **nū**, “now,” in the quotation. **Fæstnes**, the firmament, is the subject of both supplied wishes: it is to come into being and to separate the waters. “Let there now be a firmament” is an equally natural rendering of the first wish.

The narrative then names God as the maker and separator. **Đǣm** in the second relative phrase refers to the upper waters; it does not introduce another firmament. **Hit wæs ðā swā gedōn** reports fulfillment, “it was then done so,” or naturally “and so it was.” Keep it distinct from first-day **wearð geworht** and the final **wæs geworden** formula. The last clause says “a second day,” retaining **ōðer**. Both naming and the complete ending must be included, with the supplied help available throughout. [10]

Cumulative review

X1.

Third singular	Corresponding second singular
Hē geaf.	Đū gēafe.
Hē sealde.	Đū sealdest.

Both new clauses mean "You, one person, gave." Strong **giefan** uses its plural-preterite stem **gēaf-** plus **-e**, including the long vowel. Weak **sęllan** keeps its dental preterite formation and adds second-singular **-est**. Applying the weak ending to **geaf**, or leaving **sealde** unchanged with **đū**, misses the respective conjugation.

X2.

Verb	Present 1sg	Past evidence in the supplied entry
swęrian	swęrie	swōr/swōron: strong vowel alternation, without a dental preterite suffix
lufian	lufie	lufode: weak dental preterite

An infinitive ending in **-ian** does not by itself identify a weak verb. **Swęrian** is strong VI despite its special present pattern; **lufian** is weak Class II. Their first-singular forms both end in **-ie**, so that one present ending alone also fails to distinguish the past systems. The infinitives and participles in the question are supplied citations; neither participial syntax nor unaided citation recall is required. [4]

X3.

Clause	Verb and strong class	Finite analysis	Meaning
Gē sēoð.	sēon, V	Present indicative, second plural	You, plural, see.
Hē sīeð.	sēoðan, II	Present indicative, third singular	He boils.

Sēoð is the contracted plural of "see." **Sīeð**, with long **īe**, is the selected third-singular present of "boil." The third-singular seeing form is instead **siehð**, with short **ie** and **h**. Do not identify a verb from an approximate visual resemblance or ignore **gē/hē**. These are form-identification examples within the indicative; no object or other complement needs to be invented. [3, 6]

Source notes

[1] Cook, **A First Book in Old English**, second edition (1895), §§92–95, printed pp.54–55 / PDF70–71: four principal parts, finite indicative endings, plural-based second-singular preterites and the contracted **fōn** paradigm. The models with ordinary preceding subjects use the selected plural endings, without importing the separate postposed-pronoun **-e** condition.

[2] Cook §105, printed p.63 / PDF79, with Wright and Wright, **Old English Grammar**, second edition (1914), §§503–504, pp.260–261 / PDF280–281. These supply Class IV and the particular **niman/cuman** alternatives.

[3] Cook §106, printed pp.63–64 / PDF79–80, and Wright §§505–507, pp.261–262 / PDF281–282. Cook's consonant rules §§28–37, pp.22–25 / PDF38–41, support the stated dental combinations and contracted alternatives. Cook's dictionary **ge-sēon**, p.294 / PDF310, explicitly supports current display **gesēon**; removing the compound hyphen is declared normalization. Exact **geseah** remains short.

[4] Cook §107, printed pp.64–66 / PDF80–82, and Wright §§508–510, pp.262–263 / PDF282–283. The present of **swęrian** is read with Cook §§116–117, pp.71–72 / PDF87–88. Complete finite cells apply the checked stems, endings and changes; they are not all individually printed lexical attestations.

[5] Cook §§108–110, printed pp.66–67 / PDF82–83, and Wright §§511–519, pp.263–265 / PDF283–285. Wright §476, p.248 / PDF268, explicitly supports **fielþ** and the **x + ending → xt** result in **wiext**; **þ → ð** is the declared spelling convention in the classroom form **fielð**. Cook Exercises, vocabulary "grow," p.50 / PDF58, and Cook's dictionary p.297 / PDF313 list **grōwan**. Its alternative past **grēowon** applies the **flōwan** pattern explicitly assigned to it in §109, p.67 / PDF83; it is not an individually printed past token on the dictionary page.

[6] Cook §§101–104, printed pp.58–63 / PDF74–79, supply the Class I–III patterns used by the four new bridge verbs. Their specific meanings and classes are checked against Cook Exercises vocabulary and the lexical facsimiles. Bosworth–Toller, main dictionary (1898), **swimman**, p.957a, records the **o**-past alternatives; the lesson selects the Cook nasal-Class-III **a/u** series. The long **īe** of **flīehð/sīeð** must not be confused with the short **ie** of seeing **siehð**.

[7] The bounded ordinary verb uses are individually checked in Bosworth–Toller facsimiles: **beran**, Main p.88a; **niman**, p.721a–b; **giefan**, p.474b; **etan**, p.259b and Supplement (1921) p.195a; **sittan**, p.879b; **licgan**, pp.636b–637a; **standan**, p.910b; **feallan**, p.271b; **healdan**, p.517b; **sēon**, p.864b; **ge-sēon**, p.439b; **flēogan**, p.291b; **scīnan**, p.833a; and **swimman**, p.957a. Food, birds and the other classroom combinations are declared new applications of these frames, not verbatim source quotations. Prior nominal and possessive paradigms remain those taught in Units 1–4.

[8] Cook §156.k, printed p.92 / PDF108, explicitly illustrates **geswīcan** with the genitive of the work ceased from. The Sabbath passage, p.128 / PDF144, confirms

the construction. Its English “from” does not require a separate Old English preposition in the selected frame.

[9] Cook, **Exercises in Old English** (1895), Group I, Exercise 5, printed p.3 / PDF11, items 1–16. Original prompts are preserved. Item 11 has no note constraining the number of English **fish**; item 15's **swims** supplies that constraint for its own subject. Vocabulary “create,” p.44 / PDF52, and “see,” p.61 / PDF69, are read with the independently checked prefixed and unprefixed entries.

[10] Cook, Reader I, **The Creation of the World**, first day: printed p.123 editorial body lines1–5 through p.124 line3 / PDF139–140; second day: p.124 lines4–10 / PDF140. On p.124, these line labels expand the printed marginal 5 and 10; p.123 counts are editorial. The 34 applicable numbered source notes are p.123 nn.1–18 and p.124 nn.1–16. Cook §53, p.37 / PDF53, supports weak feminine **heofone**; §87.d, p.52 / PDF68, the relative particle; and §173, p.97 / PDF113, the supplied naming construction with two accusatives. The first day is the unchanged earlier reading revisited; the second day is its complete new continuation.

UNIT 6

Answer key

The Old English sentences below are models. Accept another defensible word order or a stated alternative when it preserves the requested sense, construction, agreement and reference. A valid form can nevertheless miss an expressly selected target: distinguish that result from impossible Old English. In particular, documented **-enne** infinitives and finite variants need not be linguistic errors, although a task may request the selected table forms; a bare purpose infinitive does not meet an explicit request for the inflected construction. [1,4]

In the command tables, singular means one addressee and plural means two or more. In infinitive constructions, the finite verb carries person and number; the infinitive retains the case government of its verb. A form exercise asks for forms, without introducing every possible use of the verb. Preserve the printed vowel quantities and stem alternations.

For translations, judge the relations and meaning, not a unique English wording. A wish or purpose does not by itself assert fulfillment. Keep the reading's supplied phrases available when answering its questions; their appearance here does not require independent production of their syntax.

A. Indicative systems

A01.
Target: the complete indicative system of witan.

Person and number	Present indicative	Preterite indicative
1 sg.	wāt	wiste
2 sg.	wāst	wistest
3 sg.	wāt	wiste
1–3 pl.	witon	wiston

Present knowledge, "know"; past knowledge, "knew." **Wāt** serves both first and third singular, but **wāst** is second singular. The present plural is **witon**; the dental past is **wiste**, with **wistest** in the second singular and **wiston** in every plural person. A strong-looking present stem does not give the word past meaning. [1]

A02.

Target: the complete indicative system of cunnan.

Person and number	Present indicative	Preterite indicative
1 sg.	cann	cūðe
2 sg.	canst	cūðest
3 sg.	cann	cūðe
1–3 pl.	cunnon	cūðon

In the taught skill construction, the present means “know how to,” the past “knew how to.” Distinguish singular **cann/canst** from plural **cunnon**. The past has long **ū** and a dental consonant: **cūðe**, **cūðest**, **cūðon**. Do not use the present singular as a past simply because it resembles a strong preterite. [1]

A03.

Target: the complete indicative system of ðurfan.

Person and number	Present indicative	Preterite indicative
1 sg.	ðearf	ðorfte
2 sg.	ðearft	ðorftest
3 sg.	ðearf	ðorfte
1–3 pl.	ðurfon	ðorfton

The selected sense is “need to,” with “needed to” in the past. The singular present has **ðearf-**, the plural **ðurf-**, and the past **ðorft-**. Preserve the final **-t** of second-singular **ðearft** and the full past ending in **ðorftest**; the present and past plural stems are different. [1]

A04.

Target: the complete indicative system of durran.

Person and number	Present indicative	Preterite indicative
1 sg.	dearr	dorste
2 sg.	dearst	dorstest
3 sg.	dearr	dorste
1–3 pl.	durron	dorston

The selected meanings are “dare to” and “dared to.” The first and third singular use **dearr**, the second **dearst**, and the plural **durron**. The past changes to **dorst-**. A plural subject requires the plural form even when English “dare” does not visibly distinguish the persons. [1]

A05.

Target: the complete indicative system of sculan.

Person and number	Present indicative	Preterite indicative
1 sg.	sceal	sceolde
2 sg.	scealt	sceoldest
3 sg.	sceal	sceolde
1–3 pl.	sculon	sceoldon

In the assigned obligation sense, the present means "must," the preterite "had to." Contrast **sceal/scealt**, **sculon**, and past **sceold-**. The table retains **eo** in the past. Cook also records the shorter spelling represented by **scoldon**: it is a valid variant, but it differs from the selected table. The past need not mean hypothetical English "should." [1]

A06.

Target: the complete indicative system of mugan.

Person and number	Present indicative	Preterite indicative
1 sg.	mæg	meahte
2 sg.	meaht	meahtest
3 sg.	mæg	meahte
1–3 pl.	magon	meahton

The selected present expresses ability; the preterite expresses past ability. The second-singular present **meaht** differs from first/third **mæg** and plural **magon**. The chosen past has **meaht-** throughout. **Mugan** and **magan** are citation labels for this system; the label is not an assigned usable infinitive. [1]

A07.

Target: the complete indicative system of mōtan.

Person and number	Present indicative	Preterite indicative
1 sg.	mōt	mōste
2 sg.	mōst	mōstest
3 sg.	mōt	mōste
1–3 pl.	mōton	mōston

Here the present expresses permission, "may/is allowed to," and the past "was allowed to." Keep long **ō** throughout. The second-singular present is **mōst**, but its past counterpart is **mōstest**. The dictionary also records other senses; substituting obligation would miss the permission target used in this unit. [1]

A08.

Target: the complete indicative system of dōn.

Person and number	Present indicative	Preterite indicative
1 sg.	dō	dyde
2 sg.	dēst	dydest
3 sg.	dēð	dyde
1–3 pl.	dōð	dydon

The ordinary meanings are "do" and "did." Present **dō** and **dōð** have **ō**, but second/third singular have **ē**. The past is **dyde**, not a past made by adding an ending to the present stem. Its **y** is short. **Dōð** is the present form for all three plural persons, not an infinitive. [1]

A09.

Target: the complete indicative system of gān.

Person and number	Present indicative	Preterite indicative
1 sg.	gā	ēode
2 sg.	gǣst	ēodest
3 sg.	gǣð	ēode
1–3 pl.	gāð	ēodon

The ordinary meanings are "go" and "went." Distinguish present **gā/gāð** from second/third singular **gǣst/gǣð**. The past uses the separate **ēod-** stem: **ēode**, **ēodest**, **ēodon**. Do not derive its past mechanically from **gān** or replace long **ǣ** in the selected present singulars with **ā**. [1]

A10.

Target: the complete indicative system of willan.

Person and number	Present indicative	Preterite indicative
1 sg.	wille	wolde
2 sg.	wilt	woldest
3 sg.	wille	wolde
1–3 pl.	willað	woldon

The selected meanings are "want/intend to" and "wanted/intended to." Both first- and third-singular present are **wille**; second singular is **wilt**. The plural uses **willað**, while the past uses **wold-**. Do not add an ordinary third-singular dental ending to **wille**, or assume that **wolde** necessarily expresses a hypothetical "would." [1]

A11.

Target: both complete present indicative series.

Person and number	bēo series	Earlier eom series
1 sg.	bēo	eom
2 sg.	bist	eart
3 sg.	bið	is
1–3 pl.	bēoð	sindon

There is no separate invented past paradigm for the bēo series: the earlier **wæs/wǣre/wǣron** system supplies the past. In the explicitly later situation of M12, **bið** means "will be"; the series can also express habitual or general truths. Its form alone does not require future meaning. These indicative cells are distinct from the earlier supplied wish forms in the creation reading. [1–2]

A12.

Target: tense and person within the indicative.

Form	With a third-singular subject	Also first singular?
wāt	Present: he knows	Yes
wiste	Preterite: he knew	Yes
cann	Present: he knows how/can	Yes
cūðe	Preterite: he knew how/could	Yes
gǣð	Present: he goes	No
ēode	Preterite: he went	Yes
dēð	Present: he does	No
dyde	Preterite: he did	Yes

Wāt and **cann** belong to preterite-present systems: their present forms resemble strong past forms historically, but their meaning here is present. Their actual pasts are **wiste** and **cūðe**. Shared spelling permits more than one person; an expressed subject selects the person in a sentence. The stated past-ability sense of **cūðe** need not be hypothetical. [1]

A13.

Target: distinguish missing forms from shared forms. A dictionary needs a label under which to list a verb even when that label is not an attested infinitive. It therefore does not license an infinitive clause, an inflected infinitive, or a regular command pair. This applies to the reference labels for **durran, sculan, mugan/magan** and **mōtan**.

A missing cell lacks an established usable form; syncretism means that two established cells have the same form. For example, **gāð** can be indicative or imperative in the appropriate construction. Some preterite-presents have documented command usages or substitutes, but these do not supply an ordinary complete imperative system for this exercise. Treating every dictionary label as a productive infinitive confuses a citation with evidence for a form. [2]

M. Knowledge, ability, necessity and willingness

M01.

Ic cann swimman. Wē cunnon singan.

The target is learned ability: "I know how to swim; we know how to sing." **Cann** is present indicative first singular; **cunnon** is first plural here. **Swimman** and **singan** are plain infinitives. English "can" is also defensible if the explanation preserves the skill sense. A second finite verb or an inflected infinitive after the modal misses the construction. [5]

M02.

Hē mæg ðæt wæter beran. Hīe magon ðǣm męnn helpan.

The target is present capability: he can carry the water; they can help the man. **Mæg/magon** agree with the singular/plural subjects. **Ðæt wæter** is the accusative thing carried; **ðǣm męnn** is the dative person helped. A different defensible order of those constituents is acceptable, but changing the helped person to an accusative loses the taught government. The infinitives remain unchanged by subject number. [5]

M03.

Ic ðearf gān. Wē ðorfton gān.

The first clause expresses my present need; the second our past need. **Ðearf** is first-singular present and **ðorfton** first-plural preterite in these clauses. **Gān** remains plain in both. "We had a need to go" preserves the second meaning; a merely hypothetical "we would need to go" adds an unsupported condition. Keep the past **o** distinct from present-plural **u**. [5]

M04.

Đū dearst gān. Đū dorstest gān.

Both subjects are one addressee. **Dearst** is second-singular present indicative, **dorstest** second-singular preterite. The target contrast is "dare" against actual past "dared." A form belonging to first/third singular misses the explicit second person; the plain infinitive **gān** does not change with tense. [5]

M05.

Wē sculon ðæt weorc dōn. Hīe sceoldon ðæt weorc dōn.

The first clause states our obligation now; the second their obligation in the past. **Sculon** is first plural here, **sceoldon** third plural; **dōn** is the plain infinitive with accusative **ðæt weorc**. "Were obliged to do" is a good rendering of the past. Other taught wording for performing the work can preserve the meaning, but the requested obligation verb remains **sculan**. Predictive "will do" or hypothetical "would do" would change this target. The documented **scoldon** variant remains linguistically valid, though **sceoldon** is the selected form. [5]

M06.

Đū mōst ðone męte etan. Đū mōstest ðone męte etan.

The first sentence gives one person present permission to eat the food; the second gives that person past permission. **Mōst** and **mōstest** are second singular, with long **ō**. **Etan** takes the accusative food object in both. "You may eat" is suitable for the first sentence. English "must eat" selects a different sense and does not satisfy the stated permission context. [5]

M07.

Hē wille ðǣm fuglum wæter giefan. Hīe woldon ðǣm fuglum wæter giefan.

The target is his present desire and their past desire to give water to the birds. **Wille** is third-singular present here, **woldon** third-plural preterite. **Wæter** is accusative; **ðǣm fuglum** is the dative recipient. The separately taught **sęllan** can also express giving in this frame. Keep the volitional verb and its tense; neither sentence by itself asserts that the giving happened. Adding an ordinary third-singular ending to **wille** is not the selected paradigm. [5]

M08.

Ic ne dorste gān. Wē ne magon ðæt scip beran.

The first sentence denies past daring; the second denies present ability. Put **ne** before the finite modal. **Dorste** is first-singular preterite here, **magon** first-plural present. **Ðæt scip** is the accusative thing carried. A different defensible order may preserve the relations, but negating only the embedded action would not express these same modal meanings. No new contracted negative form is needed. [5]

M09.

Wit cunnon swimman. Git sculon unc helpan.

Wit means "we two," **git** "you two," and **unc** "us two." The first sentence expresses learned ability; the second obliges the two addressees to help the two speakers. Dual subjects take ordinary plural verbs, hence **cunnon** and **sculon**. **Unc** is dative because **helpan** governs the helped person in that case. Ordinary plural pronouns would lose the expressly requested two-person reference; a separate dual verb ending is not supplied.

M10.

Hē wolde gān. Hē ēode.

The first clause says that he wanted or intended to go; the second says that he went. **Wolde** is preterite indicative third singular with plain **gān**; **ēode** is preterite indicative third singular of **gān**. A wish can remain unfulfilled, so the first statement alone does not entail the second. Defensible wording must preserve that difference; treating **wolde** as automatically reporting an accomplished action misses the point.

M11.

Ic cann swimman: "I know how to swim." **Ic mæg swimman:** "I can swim," in the stated sense of present capability.

Cann and **mæg** are the finite present indicative verbs, first singular here. **Swimman** is the plain infinitive in both and names the action. The first sentence emphasizes learned skill; the second emphasizes ability or capacity in the relevant circumstances. English "can" can render either, provided the distinction is explained. This exercise does not establish a universal one-to-one mapping between English auxiliaries and Old English verbs. [5]

M12.

Dæt scip bið gearu. Dæt scip is gearu.

In the given expected-later situation, the first means "The ship will be ready." The second gives the requested ordinary present comparison, "The ship is ready." **Bið** and **is** are third-singular indicative forms. **Gearu** is the strong nominative neuter singular predicate adjective agreeing with **scip**; the subject's article does not make a predicate adjective weak.

The bēo series can also express habitual or general truths, so "future" is the contextual interpretation here, not the meaning of every **bið**. An answer using the eom series for both sentences may be defensible in some future context but would miss the first sentence's expressly requested series. [2]

M13.

Ic wāt ðā ðing. Hē wiste ðā ðing.

The target is present "I know" and past "he knew," each with the accusative nominal object "those things." **Ðā** is the pointing demonstrative; **ðing** has its explicitly taught fact/matter sense here. The noun's plural form happens to match its nominative, but its relation to **witan** is accusative.

This construction names what is known. **Cunnan** with a plain infinitive, as in M01, expresses knowing how to perform an action. The distinction is between the assigned constructions and senses, not a claim that **cunnan** has no other uses anywhere in Old English. Using it instead of the requested **witan** would miss this task's target. [6]

I. Commands

I01.

Target: the complete second-person command pairs.

Person and number	**hīeran**	**nęrian**	**gefręmman**
2 sg.	hīer	nęre	gefręme
2 pl.	hīerað	nęriað	gefręmmað

Hīer has no final **-e**; **nęre** and **gefręme** retain it. The plural restores the selected **-iað** or geminated stem. Merely removing the final **-n** of each infinitive will not give these singulars. [3]

I02.

Target: the complete second-person command pairs.

Person and number	**cyssan**	**gefyllan**	**sęttan**	**gierwan**
2 sg.	cys	gefyl	sęte	giere
2 pl.	cyssað	gefyllað	sęttað	gierwað

Person and number	**sęllan**
2 sg.	sęle
2 pl.	sęllað

The selected heavy-stem singulars **cys** and **gefyl** simplify final geminates. The short-stem forms **sęte** and **sęle** retain **-e** while losing gemination; their plurals retain **tt/ll**. **Giere** lacks the **w** retained in **gierwað**. The singular pattern is not the same for every doubled consonant. Documented unsimplified spellings need not be impossible Old English, but these are the requested selections. [3]

I03.

Target: the complete second-person command pairs.

Person and number	**lufian**	**habban**	**libban**
2 sg.	lufa	hafa	leofa
2 pl.	lufiað	habbað	libbað

Weak II has **lufa/lufiað**. The weak III survivors require their own pairs: **hafa/habbað** and **leofa/libbað**. Do not impose the weak-II singular ending on an unchanged weak-III infinitive stem. Cook also gives the documented **lifiað** plural alternative; the selected plural here is **libbað**. [3]

I04.

Target: the complete second-person command pairs.

Person and number	**sęcgan**	**hycgan**
2 sg.	saga	hoga
2 pl.	sęcgað	hycgað

The singulars **saga** and **hoga** differ sharply from the selected plural stems. Cook also records **sęge** beside **saga**, and optional **e** in the plural spellings. These are documented alternatives; the table supplies the requested course forms. Knowing a command form does not by itself establish a new object or complement construction. [3]

I05.

Target: the complete second-person command pairs.

Person and number	drīfan	bēodan	bindan	helpan
2 sg.	drīf	bēod	bind	help
2 pl.	drīfað	bēodað	bindað	helpað

Person and number	drincan
2 sg.	drinc
2 pl.	drincað

Use the present stems shown here. Keep long **ī** in **drīf** and long **ēo** in **bēod**; **bind, help** and **drinc** have their selected short vowels. A changed strong-past stem is not a command stem. The plural **-að** addresses more than one person. [3]

I06.

Target: the complete second-person command pairs.

Person and number	wrēon	tēon
2 sg.	wrīh	tēoh
2 pl.	wrēoð	tēoð

The singular commands restore **h**, but their vowels differ: **wrīh** has long **ī**, **tēoh** long **ēo**. The plurals remain contracted. Do not transfer either singular vowel to the other verb or append the singular **h** to the selected plural. [3]

I07.

Target: the complete second-person command pairs.

Person and number	beran	niman	cuman
2 sg.	ber	nim	cum
2 pl.	berað	nimað	cumað

Use **ber, nim, cum**, without importing the vowel changes of present indicative second/third singular. All three plural commands use **-að** on the selected present stem. Replacing a command by a personal indicative form changes the requested mood. [3]

I08.

Target: the complete second-person command pairs.

Person and number	**giefan**	**biddan**	**sittan**	**licgan**
2 sg.	gief	bide	site	lige
2 pl.	giefað	biddað	sittað	licgað

Person and number	**etan**
2 sg.	et
2 pl.	etað

The j-presents have **bide, site, lige** in the singular, with single consonants and final **-e**; their plurals retain the selected stems. **Gief** is the ordinary stem command. **Et** has neither the changed dental present-singular stem nor the long vowel of the past. [3]

I09.

Target: the complete second-person command pairs.

Person and number	**sēon**	**slēan**	**fōn**
2 sg.	seoh	sleah	fōh
2 pl.	sēoð	slēað	fōð

Singular **seoh** and **sleah** have short diphthongs; **fōh** has long **ō**. The restored **h** belongs to the singular command. The plurals are **sēoð, slēað, fōð**, preserving their own quantities and contractions. [3]

I10.

Target: the complete second-person command pairs.

Person and number	**hębban**	**scieppan**	**swęrian**
2 sg.	hęfe	sciepe	swęre
2 pl.	hębbað	scieppað	swęriað

These singular commands use **-e**. Note **f/bb** in **hęfe/hębbað**, single **p/pp** in **sciepe/scieppað**, and **swęre/swęriað**. A single rule of cutting off an infinitive ending misses these stem alternations. [3]

I11.
Target: the complete second-person command pairs.

Person and number	**faran**	**standan**	**healdan**
2 sg.	far	stand	heald
2 pl.	farað	standað	healdað

The command stems are **far, stand, heald**. Do not substitute a past stem or the altered stem of an indicative singular. The paired plural changes the number of addressees, not the tense. [3]

I12.
Target: the complete second-person command pairs.

Person and number	**weaxan**	**hātan**	**lǣtan**
2 sg.	weax	hāt	lǣt
2 pl.	weaxað	hātað	lǣtað

Preserve **ea** in **weax**, long **ā** in **hāt**, and long **æ** in **lǣt**. The commands use these selected present stems rather than the changed or contracted forms of indicative second/third singular. [3]

I13.
Target: the complete second-person command pairs.

Person and number	**dōn**	**gān**	**wesan**	**bēon**
2 sg.	dō	gā	wes	bēo
2 pl.	dōð	gāð	wesað	bēoð

Both be-command series are available. **Dō, gā, wes, bēo** address one person; their paired plurals address two or more. **Bēo** here is a command, not the first-singular indicative merely because the two cells share a spelling. No positive imperative of **willan** or regular modal command pair is required. [1,3]

I14.

One addressee: Nim ðone męte and ber hine.

Several addressees: Nimað ðone męte and berað hine.

Both commands mean "Take the food and carry it." **Hine** is masculine accusative singular, referring to **męte**, also masculine. The object keeps its number when the addressees change. A defensible word order can vary, but a neuter pronoun chosen from English "it" would miss the Old English noun's gender. Both coordinated verbs must have the requested command number.

I15.

One addressee: Help mē. Gief mē ðæt wæter.

Two addressees: Helpað mē. Giefað mē ðæt wæter.

In both versions, **mē** is dative: the person helped and the recipient of the water. **Ðæt wæter** is the accusative gift. Exactly two addressees take the ordinary plural imperative; the commands have no separate dual ending. The taught giving verb **sęllan** can preserve the gift relation with its own command forms. Changing **mē** to an object form selected without regard to the verb's government misses the target.

I16.

Ne drincað ðæt wæter. Sittað and etað.

All three verbs are second-person plural imperatives. **Ne** negates the first command: "Do not drink the water." The next two positively command sitting and eating. **Ðæt wæter** is the accusative object of drinking; eating may stand without an expressed food object. Singular commands would address the wrong number of people. The negative construction does not require an additional auxiliary. [7]

I17.

Se mann cwæð: 'Gā and dō ðæt weorc wel.'

Cwæð reports the man's past speech. Within the quotation, **gā** and **dō** are singular commands to his one companion; **ðæt weorc** is the accusative work to be done and **wel** means "well." The command remains a direct utterance, so it is not converted into a past indicative merely because the reporting verb is past. A defensible placement of **wel** is acceptable if its relation to doing remains clear.

N. Infinitives

N01.

Target: the plain and selected inflected infinitives.

Plain infinitive	After tō
bindan	tō bindanne
beran	tō beranne
sęllan	tō sęllanne

The plain infinitive has no person or number ending. After **tō**, the selected form is inflected in **-anne**. Keep the doubled **ll** of **sęllanne**; the singular command's consonant simplification is not an infinitive rule. [4]

N02.

Target: the plain and selected inflected infinitives.

Plain infinitive	After tō
hīeran	tō hīeranne
cyssan	tō cyssanne
nęrian	tō nęrianne
gefręmman	tō gefręmmanne
gierwan	tō gierwanne

Retain the infinitive stems, including **ss, mm**, the **i** of **nęrianne**, and the **w** of **gierwanne**. The shorter singular imperative stems are not the basis for these forms. The task selects **-anne**; a documented **-enne** variant is valid language but differs from this explicit selection. [3–4]

N03.

Target: the plain and selected inflected infinitives.

Plain infinitive	After tō
lufian	tō lufianne
habban	tō habbanne
libban	tō libbanne
sęcgan	tō sęcganne
hycgan	tō hycganne

Weak-II **lufian** gives **lufianne**, retaining **i**. The four weak-III forms retain their checked infinitive stems, including **bb** and **cg**. Do not form these infinitives from the exceptional singular commands. [3–4]

N04.

Target: the plain and selected inflected infinitives.

Plain infinitive	**After tō**
wrēon	tō wrēonne
tēon	tō tēonne
sēon	tō sēonne
slēan	tō slēanne
fōn	tō fōnne

These forms retain the infinitive vowel and add the selected inflected ending. They do not restore the singular imperative's **h**. In particular, long **ēo/ēa/ō** remains in **tēonne, sēonne, slēanne, fōnne**; the short vowels of **seoh/sleah** do not replace the infinitive vowels. [3–4]

N05.

Target: the plain and selected inflected infinitives.

Plain infinitive	**After tō**
gān	tō gānne
dōn	tō dōnne
wesan	tō wesanne
bēon	tō bēonne

The anomalous infinitives retain their own stems. Keep long **ā, ō, ēo** in **gānne, dōnne, bēonne**, and the separate token **tō**. The two be-infinitives are not interchangeable labels for every finite or wish form with a similar spelling. [1,4]

N06.

Hē wille etan. Hē cōm tō etanne.

The first says "He wants to eat": present **wille** takes plain **etan**. The second says "He came to eat": preterite **cōm** is followed by the selected purpose phrase **tō etanne**, and the arriving man is also the eater. The purpose does not itself assert that he ate. A plain-purpose construction can be valid in Old English, but this question expressly requests the taught inflected purpose construction. [4]

N07.

Đā gefēran cōmon tō helpanne ðǣm męnn.

The companions came for the purpose of helping the man. They are the subject of **cōmon** and the understood actors of **helpanne**. **Ðǣm męnn** is dative: it is the person helped, not the subject of the infinitive. Other defensible positions of that dative phrase may preserve the same relation. A bare-purpose infinitive can be valid language, but would miss this task's explicit inflected-infinitive target. An accusative helped person would be a government error. [4]

N08.

Se mann cōm tō giefanne męte ðǣm fuglum.

The man came in order to give food to the birds. The same man is both the arriving person and the intended giver. **Męte** is accusative; **ðǣm fuglum** is dative. The purpose construction uses **tō giefanne**. The separately taught giving verb **sęllan**, with its correct inflected infinitive, can preserve the same meaning. A defensible order of gift and recipient is acceptable; reversing their grammatical roles is not. [4]

N09.

Sentence	Finite verb	Infinitive	Construction
Hīe sculon ðæt weorc dōn.	sculon: present indicative, third plural	dōn: plain	Obligation with sculan
Hīe cōmon tō dōnne ðæt weorc.	cōmon: preterite indicative, third plural	dōnne: inflected after tō	Purpose of coming

"They must do the work." "They came to do the work." In both sentences the work is accusative and the subject is also the intended doer. The first imposes an obligation; the second states a past arrival and its purpose. Neither infinitive is another finite past form, and neither clause by itself asserts completion of the work. "Were obliged" would incorrectly move the first finite verb into the past. [4–5]

N10.

Wē magon ðone męte beran. Ic mæg ðone męte beran.

The meanings are "We can carry the food" and "I can carry the food." The finite modal changes from first-plural **magon** to first-singular **mæg**. Plain **beran** remains the same, as does its accusative food object. Changing the infinitive to an agreeing finite form, or changing the object merely because the subject becomes singular, would miss the construction.

C. Food and water for the journey

C01.

The man asks for help. **Two companions** come, and their stated purpose is **to help**.

The number comes from **twēgen gefēran**; the purpose comes from **tō helpanne**. It is reasonable to understand that they are helping the man who called them, but the purpose phrase itself has no expressed object. "They came and helped" can suggest a completed action that the purpose phrase alone does not state. The later narrative supplies the actions they actually perform.

C02.

Target: all seven commands, their plural addressees, and the corresponding singulars.

Command in the text	Addressee number	Singular command
Cumað	Plural	Cum
helpað	Plural	help
Nimað	Plural	Nim
berað	Plural	ber
Giefað	Plural	Gief
Sittað	Plural	Site
etað	Plural	et

All address the companions, so all are second-person plural. The list does not include finite statements such as **wille, mæg** or **sculon**, nor the purpose infinitive **helpanne**. **Site** needs its final **-e** and single **t**; it is not made by merely shortening the plural to its doubled stem.

C03.

Hine is masculine accusative singular and most naturally refers to **ðone męte**, "the food," which has just been named. English "it" does not make the Old English pronoun neuter. Context, as well as grammatical compatibility, identifies the food; the form alone does not exclude every other masculine referent in the passage.

The **birds** explicitly receive the water: they are the dative recipients **ðæm fuglum**. The companions subsequently **eat**. It is natural to infer that they eat the mentioned food, but **æton** has no expressed object, so "they ate that food" is an inference rather than an additional explicit clause. The final **hīe** likewise need not uniquely encode whether only the companions or the whole party travelled. Answers should preserve these differences between what is stated and what context suggests.

C04.

Form	Person and number here	Tense and mood	Stated sense	Plain infinitive
wille	First singular	Present indicative	Want/intend to	faran
mæg	First singular	Present indicative	Be able to	beran
sculon	First plural	Present indicative	Must/be obliged to	gefręmman

The **ic** before **wille** belongs to the man speaking; the **ic** before **mæg** belongs to the companion speaking. Neither is third singular simply because an English translation elsewhere uses "he can" or "he wants." **Wē** selects first plural for **sculon**. The following infinitives name the actions and carry no personal agreement.

C05.

The man said, "I want to travel. My ship is ready. Come and help me." Two companions came to help. The man said, "Take the food and carry it. Give the birds the water." The companion said, "I can carry the food. We must perform the work." The companions carried the food and gave the birds the water. The man said, "Sit and eat." The companions ate. They travelled.

Essential meaning: retain the man's wish, the companion's ability, the group's obligation, the plural commands, the purpose of coming, and the narrated past carrying, giving, eating and travelling. "Go" for **faran**, "do/accomplish the work" for **gefręmman**, and "are obliged to" for **sculon** are defensible. The quoted **sculon** is present: do not shift it into the past merely because the quotation is introduced by **cwæð**.

Food is the natural referent of **hine**, and eating that food is inferred, as C03 explains. Either a companions-only or a contextually inclusive reading of final "they" can be defended. The text says that the ship is ready and that they travel; it does not explicitly narrate boarding, sailing, or a destination. Translating willingness as an accomplished departure, or the purpose of helping as proof that helping has already occurred, would add to the stated meaning.

C06.

Commands to one companion: Cum and help mē.
First narrative sentence in the present, with its quotation unchanged: Se mann cwið: ‘Ic wille faran. Mīn scip is gearu. Cumað and helpað mē.’
The first operation changes the command addressee from plural to singular. The second changes only the reporting **cwæð**, “said,” to present **cwið**, “says.” It is a separate operation: the quoted commands stay plural in that second answer, as the instruction requires. Do not carry the first answer’s singular commands into the quotation that was expressly to remain unchanged.

R. The fisherman’s gift and first direction

R01.

The fisherman sees the young man lying at his feet and lifts him up with compassion. He divides **his cloak** into two and gives Apollonius **one half**. He has also set food before him earlier in the excerpt.
The target is the supported sequence of care and gift. A natural answer may call the young man Apollonius, using the context. It must not say that the fisherman divides the food or gives away the entire cloak. The selected text explicitly makes the sight of the young man’s posture the immediate occasion for the action. [8]

R02.

Wolde is preterite indicative third singular of **willan**, with the fisherman as its subject. Its plain infinitive is the supplied **gecȳðan**, “show.” He wanted to show Apollonius greater kindness, according to his ability or means. “Wished” or “intended” can preserve the volitional meaning; an automatic hypothetical “would have shown” would add a condition. The isolated spelling **wolde** could also serve first singular, but **hē** fixes third singular here. Supplied **mihte** in **be his mihte** is the noun “ability/power,” not another finite modal verb. [8]

R03.

Source phrase	Plain infinitive	Form and local meaning
tō bēodanne	bēodan	Inflected infinitive: to offer
tō sęllanne	sęllan	Inflected infinitive: to give

The fisherman sets out the food **he had available to offer** Apollonius. In his speech, he says to take **what he has available to give** him. The persons who receive the offering/gift are supplied by **him** and **ðē** in their respective clauses.

The target forms are inflected infinitives after **tō**, not finite verbs with person or tense. Use the printed local explanation for the **habban** construction. Modern English "had to/must" would introduce an obligation that these availability phrases do not express. The supplied relative clauses need not be independently reconstructed. [4,8]

R04.

Source command	Verb	Analysis in this speech	Plural command
Nim	niman	Imperative, second singular	Nimað
gā	gān	Imperative, second singular	gāð

The fisherman directly addresses Apollonius: "Take … and go …." That speech context establishes command use. **Gā** is also the spelling of a first-singular indicative cell elsewhere, but it is not an assertion "I go" here. Both plural replacements would address more than one person. [1,8]

R05.

Cweðende, "saying," is the supplied present active participle accompanying the fisherman's action. It is the form that introduces his actual words, with **ðus**, "thus." It is not a finite past or a command.

Cwæð is a finite preterite indicative, "said," first or third singular when isolated; **gā** in this speech is a second-singular command, "go." An English rendering such as "and said" may express the participial event naturally, but it does not make the Old English **cweðende** finite. The local note supplies the participial construction; no independent participle formation is required. [8]

R06.

He says he has something available to give Apollonius, understood in context as the half-cloak just given. He tells Apollonius to **take it and go into the town**.

The supported **ðæt ic ðē tō sęllanne hæbbe** means "what/that which I have to give you." "What" introduces the thing available for giving; it is not a question asking what the fisherman possesses. **Hæbbe** supplies "I have" in that local explanation. Its spelling alone cannot uniquely distinguish every possible mood, so the answer should not manufacture a mood test or an additional command "have!" from it. [8]

R07.

Phrase	Kind	Local meaning
tō bēodanne	tō with inflected infinitive	to offer
tō sęllanne	tō with inflected infinitive	to give
tō his hūse	Destination with a noun phrase	to his house
intō ðǣre ceastre	Destination with a noun phrase	into the town/city

The first two contain the inflected verb forms. **Hūse** and **ceastre** are supplied nouns, both dative singular in these actual phrases; **ðǣre** is feminine dative singular. A shared sequence of letters **tō** does not make every phrase infinitival. Preserve the local dative after **intō**: motion is not a reason to replace the printed form with an accusative or derive a universal rule from this one phrase. [8]

R08.
Then, as soon as the fisherman saw that the young man was lying at his feet, he compassionately lifted him up and led him with him to his house, and set before him the provisions that he had available to offer him. He still wanted, according to his ability, to show him greater kindness; he then tore his cloak in two and gave Apollonius one half, saying: "Take what I have to give you, and go into the town."
Essential meaning: preserve the opening temporal and content relations, the fisherman's compassionate action, the leading home and provision of food, his wish to show greater kindness, the division and gift of the cloak, and both final commands. The local help remains available throughout.
"With compassion" is a closer rendering of **mid mildheortnesse**; "compassionately" is natural English. "Food/provisions," "still/further," "kindness/compassion," "one half/the half part," and "town/city" are defensible within the stated relations. "As far as he could" can render **be his mihte** naturally, provided it is understood as the supplied phrase rather than a second finite modal in the Old English. Context identifies the fisherman's feet/house and Apollonius as the beneficiary; the pronoun spellings alone do not provide all those identities.
Do not translate the availability phrases as obligations, render **cweðende** as a command, or turn the final **gā** into a past departure. Stop after the first direction sentence. This excerpt does not narrate its fulfillment or contain the continuation of the fisherman's speech. [8]

X. Cumulative practice

X01.
Wit woldon uncerne męte ðæm fuglum giefan. Wit gēafon hine him.
The first sentence states the two speakers' past wish to give their food to the birds; the second states that the two speakers actually gave it. **Wit** preserves the dual subject. **Uncerne** is masculine accusative singular, agreeing with **męte**, while its possessive stem identifies the two possessors. **Hine** refers to that masculine food; **him** is dative plural here, referring to the birds.
The dual subjects take the plural finite forms **woldon/gēafon**. The infinitive remains plain after **woldon**. A defensible order or another taught giving verb may preserve the meaning, but ordinary plural possessors would lose the requested dual relation, and a neuter "it" would lose the food's grammatical gender.

X02.

Se ealda mann ne mæg ðæt micle scip beran. Helpað him.

The man lacks the ability to carry the large ship; several companions are told to help him. **Ealda** is weak nominative masculine singular; **micle** is weak accusative neuter singular. Each adjective belongs to its own article-and-noun phrase. **Him** is dative singular as the person helped, while **helpað** is plural because of its addressees.

A defensible word order can vary. The man's singular number does not make the command singular: he is its helped person, not its addressee. Nor does **helpan** take an accusative merely because **beran** does.

X03.

Hē cōm tō helpanne ūs. Wē woldon him męte giefan. Hē sæt and ǣt.

He came for the purpose of helping us; we wanted to give him food; he sat and ate. The arriving man is the understood helper. **Ūs** is dative after **helpan**; **him** is the dative gift-recipient and **męte** the accusative gift. The first infinitive is inflected after **tō**, the second plain after **woldon**.

The final coordinated verbs are both third-singular preterites. Preserve short **æ** in **sæt** and long **ǣ** in **ǣt**. Other defensible word orders or the taught alternative giving verb may preserve the sense, but the purpose must not be mistaken for a completed helping event, and the wish to give must not be mistaken for the giving itself. [4]

X04.

Gē gāð is a statement: "You, plural, go." **Gāð** is a command: "Go," addressed to more than one person. In the first, **gē** fixes second-plural agreement; the task's stipulated statement use identifies **gāð** as present indicative. An expressed second-person subject can also accompany a command. The second uses the second-plural imperative. Their spelling is shared, but their functions differ.

Hē dēð ðæt weorc means "He does the work," with third-singular present indicative **dēð**. **Dō ðæt weorc** means "Do the work," a command to one person. Here the indicative and imperative forms visibly differ. **Dō** can serve first-singular indicative in a different sentence, so an ending alone is not a complete account of its use. Identify the actual statement or command in context. [1,3]

X05.

One model:

Se mann cōm tō helpanne twǣm gefērum. Đā gefēran willað ðone męte beran. Berað ðone męte. Hīe bǣron ðone męte.

"The man came to help two companions. The companions want to carry the food. Carry the food. They carried the food."

Required part	**How the model meets it**
Past arrival with purpose	cōm tō helpanne: the arriving man intends to help
Willingness	willað … beran: a finite volitional verb with plain infinitive
Command to both companions	Berað: second-person plural imperative
Completed past action	bǣron: the companions carried the food

The three new constructions to label are **purpose with tō + inflected infinitive**, **willan + plain infinitive**, and **the plural direct command**. **Twǣm gefērum** is dative because the companions are helped; **ðone męte** is accusative because the food is carried.

Give credit to another coherent four-sentence account that uses the requested vocabulary and constructions, makes the two-companion situation clear, and preserves the stated distinction between intention and accomplished action. The arriving/helper roles or the order of phrases can differ from this model when the reference remains coherent. Do not require this exact string or an extra narrative event. In particular, check that the arriving subject is also the intended actor of the purpose infinitive, that the volitional complement is plain, that the command addresses both companions with a plural form, and that the last required event has an actual finite past verb. Correct vocabulary alone does not repair a wrong case, command number, or infinitive construction.

[7] Cook, §198, p. 105 (PDF p. 121), on direct commands. For **ne** with an imperative, compare Reader XII, p. 183 (PDF p. 199), editorial line 7, and the cited examples in §156h, p. 92 (PDF p. 108), and §159a, p. 93 (PDF p. 109).

[8] Cook, Reader XII, p. 167 (PDF p. 183), editorial lines 3–10, spanning the printed line marks 5 and 10. The selected excerpt ends at the period after **ceastre**, completing the fisherman's first direction sentence; his speech continues beyond the selection. Cook's original notes are 5, "See 143."; 6, "Lat. epulas."; and 7, "MS. fæstnesse. Lat. pietati." The local support for the temporal clause, relative phrases, availability construction and participle remains part of the reading. The two **tō**-infinitives can be identified from the taught forms without turning that availability construction into an independently required rule.

UNIT 7

Answer key

The models below give the selected forms of this course. A different word order or an attested form can be good Old English; assess it separately from compliance with an expressly requested verb, construction, or paradigm. Preserve the meaning, participants, number, tense, and force of the task. A spelling shared by several forms does not by itself decide its analysis.

In the source reading, the printed help remains available. The three forms **swimmendu, flēogendu, libbendu** are for recognition in that passage. The supplied clauses and exceptional forms are not tests of unaided recall.

A. Subjunctive forms

In A01–A05, every singular entry serves the first, second, and third persons singular; every plural entry serves the first, second, and third persons plural. Subjects identify person. A dual subject likewise takes a plural verb. The four displayed forms for each verb therefore give the complete present and preterite subjunctive systems requested. [1]

A01. hīeran and sęllan.

Person and number	hīeran · Present	hīeran · Preterite	sęllan · Present	sęllan · Preterite
1–3 sg.	hīere	hīerde	sęlle	sealde
1–3 pl.	hīeren	hīerden	sęllen	sealden

Target: distinguish the ordinary weak-I dental preterite from the lexical preterite of **sęllan**. Retain **hīer-** in both tenses; use **seald-**, not an invented dental extension of **sęll-**, in the preterite. The plural subjunctive ends in **-en**; **hīerdon, sealdon** would be indicative.

A02. lufian and libban.

Person and number	lufian · Present	lufian · Preterite	libban · Present	libban · Preterite
1–3 sg.	lufie	lufode	libbe	lifde
1–3 pl.	lufien	lufoden	libben	lifden

Target: weak-II **-ie/-ien** and the selected weak-III stems. The **i** of **lufi-** remains before the present subjunctive endings. For **libban**, distinguish **libb-** here from present indicative **leof-** in **leofað**, and from preterite **lifd-**. Do not make the subjunctive by retaining the indicative third-singular ending **-að**.

A03. bindan and weaxan.

Person and number	bindan · Present	bindan · Preterite	weaxan · Present	weaxan · Preterite
1–3 sg.	binde	bunde	weaxe	wēoxe
1–3 pl.	binden	bunden	weaxen	wēoxen

Target: use the strong preterite plural stem. Compare indicative **bundon, wēoxon**. **Band** is a singular indicative form and does not supply the stem of **bunde/bunden**. The present subjunctive **weaxe** also keeps the present stem, rather than the altered vowel of indicative **wiext**.

A04. sēon and biddan.

Person and number	sēon · Present	sēon · Preterite	biddan · Present	biddan · Preterite
1–3 sg.	sēo	sāwe	bidde	bǣde
1–3 pl.	sēon	sāwen	bidden	bǣden

Target: preserve the contracted present of **sēon** and the doubled consonant of present **bidd-**. The preterites use **sāw-** and **bǣd-**, corresponding to the learned plural indicative stems. **Sēon** can also spell the infinitive, but that does not remove its place in the finite subjunctive paradigm; a clause determines which use is present.

A05. witan and willan.

Person and number	witan · Present	witan · Preterite	willan · Present	willan · Preterite
1–3 sg.	wite	wiste	wille	wolde
1–3 pl.	witen	wisten	willen	wolden

Target: retain each irregular system. The present indicative **wāt** does not supply the subjunctive **wite**. **Wolde** can also be a preterite indicative singular; the spelling alone neither proves subjunctive mood nor requires the English word "would."

A06. wesan/bēon.

Person and number	Present, sīe series	Present, bēo series	Shared preterite
1–3 sg.	sīe	bēo	wǣre
1–3 pl.	sīen	bēon	wǣren

Target: both selected present alternatives and the one shared preterite. Number is distinguished; person is not distinguished by the ending. Do not invent a second preterite for the **bēo** series. **Bēo** also occurs as a singular imperative, and **bēon** as an infinitive; analyse their use in a clause, not from the spelling alone.

A07. Five new verbal systems.

Verb	Present indicative, 3 sg.	Preterite indicative, 3 pl.	Present subjunctive, 1–3 pl.
gīeman	gīemð	gīemdon	gīemen
rīcsian	rīcsað	rīcsodon	rīcsien
gemanigfieldan	gemanigfielt	gemanigfieldon	gemanigfielden
tōtwǣman	tōtwǣmð	tōtwǣmdon	tōtwǣmen
wyrcean	wyrcð	worhton	wyrcen

Target: distinguish indicative **-on** from subjunctive **-en**, while retaining the lexical stem changes. **Rīcsien** has the weak-II present **i**. In **gemanigfielt**, the stem-final dental and the third-singular ending have the selected contracted outcome; **gemanigfieldon** retains **d** before the plural ending. **Worhton** belongs to the irregular dental preterite of **wyrcean**, not to a new strong-verb pattern.

A08. Indicative and subjunctive endings.

Given expression	Finite analysis
hīe bundon	bindan, preterite indicative, third plural
hīe bunden	bindan, preterite subjunctive, third plural
hīe lufodon	lufian, preterite indicative, third plural
hīe lufoden	lufian, preterite subjunctive, third plural

Target: the contrast **-on : -en**. The verb ending distinguishes mood; **hīe** supplies third-person reference. **Bunden** is a finite subjunctive in the expression as presented, although the same spelling also belongs to the past participle. Neither subjunctive fragment supplies enough context to choose a full English conditional, wish, or other sentence. A response such as “they would have bound” invents tense and clause information absent from the task.

P. Participles and passive clauses

Participles used adjectivally follow the assigned strong or weak agreement pattern. A verbal predicate permits an uninflected past participle or a strong-masculine-like ending; full attributive agreement is not compulsory there. Some spellings can occur in both constructions. [2]

P01. Present participles.

Infinitive	Retained stem	Uninflected present participle
bindan	bind-	bindende
nęrian	nęri-	nęriende
lufian	lufi-	lufiende
cweðan	cweð-	cweðende

Target: add **-ende** to the present stem. In **nęrian** and **lufian**, remove **-an**, retaining the **i**: these are not forms made by removing all of **-ian**. Nor should an indicative third-singular stem such as **cwið-** replace **cweð-**.

P02. Past participles.

Infinitive	Selected past participle	Formation
bindan	bunden	strong stem bund- with -en
beran	boren	strong stem bor- with -en
hīeran	hīered	weak dental formation
gehālgian	gehālgod	weak-II -od; retain lexical ge-

Target: reproduce the selected participles, including their vowels and prefixes. **Bindan** and **beran** are strong: adding a weak dental ending to **bind-** or **ber-** does not produce their past participles. **Hīered** retains the vowel before **d** in this selected citation form; its preterite **hīerde** is not interchangeable with it. An attested prefixed variant may be valid language, but the requested forms here are **bunden, boren, hīered, gehālgod**.

P03. Agreement of bindende.

Part	Answer	Analysis
(a) a binding man, nominative	bindende mann	strong masculine nominative singular
(b) the binding man, nominative	se bindenda mann	weak masculine nominative singular
(c) dative feminine singular	bindendre	strong
(d) genitive plural, definite	bindendra	weak

Target: the determiner and the required case control the choice. There is no indefinite article to translate “a” in (a). The definite **se** in (b) selects weak **bindenda**, not strong **bindende**. Parts (c) and (d) ask only for the participle; adding an unfamiliar noun is unnecessary. **Bindendra** also has a strong genitive-plural use, but the stated definite phrase selects its weak use here.

P04. Agreement of bunden.

Part	Participial answer	Analysis
(a) a bound animal, accusative neuter singular	bunden	strong
(b) the bound animal, accusative neuter singular	bundene	weak
(c) of bound birds, genitive plural	bundenra	strong
(d) to the bound birds, dative plural	bundenum	weak

Target: adjectival agreement. The fuller model preserves **bunden-**; the accepted shorter alternatives are **bundne** in (b) and **bundnum** in (d). Examples of the first two phrases are **bunden dēor** and **ðæt bundene dēor**. In (c), "of" requests a genitive, not a newly introduced prepositional phrase. An uninflected verbal-predicate rule cannot replace the requested attributive forms.

P05. Hē bint ðæt dēor.

Model: Ðæt dēor is bunden. — "The animal is bound."

Target: present passive with **wesan**. In the active, **hē** is the subject and **ðæt dēor** the accusative patient. In the passive, **ðæt dēor** is the nominative subject and **is** agrees with its singular number. The neuter nominative and accusative happen to look alike; their syntactic functions have changed. The agent is omitted as requested. A form of **weorðan** could make a passive, but would miss this task's chosen auxiliary. [3]

P06. Hīe bundon ðā dēor.

Model: Ðā dēor wurdon bunden. — "The animals were bound," describing the binding event.

Target: preterite passive with **weorðan**. **Wurdon** is third plural preterite indicative, agreeing with the new nominative subject **ðā dēor**. The active subject **hīe** is omitted. **Bundene** is also defensible as the predicate participle. **Wǣron bunden** can be good Old English, but does not satisfy the express request for **weorðan**. Do not replace plural **wurdon** with singular **wearð** merely because **dēor** has a zero plural ending.

P07. Đā dēor sindon bunden / Đā dēor sindon bundene.
Both can mean **"The animals are bound." Sindon** is the finite plural auxiliary. **Bunden** is uninflected in the first verbal predicate; **bundene** has the permitted strong-masculine-like plural ending in the second. Neither requires the neuter subject to become masculine.
Target: distinguish the construction from attributive agreement. The selected strong attributive neuter nominative/accusative plural is **bundenu**, as in **bundenu dēor**, "bound animals"; the adjective model also accepts **bunden** and **bundene** in those cells. Thus neither spelling is categorically forbidden attributively. The difference is that an attributive participle occupies an agreeing adjective cell, whereas a verbal predicate permits the predicate patterns just described. A spelling alone cannot prove which construction is present. [2]

P08. Bēo geblētsod / Bēon ðā fuglas gemanigfielde.

Utterance	Analysis	Translation
Bēo geblētsod.	bēo: second singular imperative in the stated command; geblētsod: past participle in its verbal predicate	Be blessed.
Bēon ðā fuglas gemanigfielde.	bēon: third plural present subjunctive; ðā fuglas: nominative subject; gemanigfielde: past participle with plural predicate ending	Let the birds be multiplied.

Target: a command to one male addressee versus a wish about plural birds. The first **bēo** is also formally compatible with a singular present subjunctive, so the expressly stated command setting resolves its use. **Geblētsod** is compatible with the male singular addressee; its spelling also serves as the uninflected predicate base. In the second, **bēon** is finite, not an infinitive. The auxiliary supplies mood, person, and number; the participle does not independently express those finite categories.

M. Mood in clauses

The translations in this section distinguish an assertion, a command, a wish, and a conditional setting. Neither English "may/would" nor the Old English conjunction **gif** is a mechanical instruction to use a particular mood. [4]

M01. Statement and wish.
Hīe swimmað on ðǣm sǣ. — "They swim in the sea." **Swimmað** is present indicative, third plural: the speaker asserts the activity.
Swimmen hīe on ðǣm sǣ. — "Let them swim in the sea" or "May they swim in the sea." **Swimmen** is present subjunctive, third plural: the speaker expresses a wish or exhortation about them.
Target: distinguish the two clause forces. Both retain **on** with dative **ðǣm sǣ** for the location. The selected productive **sǣ** is masculine. The first sentence does not itself say they are able or permitted to swim; the second does not assert that they actually do so.

M02. Gāð / Gān wē.
Gāð. — "Go," addressed to more than one person: second plural imperative.
Gān wē. — "Let us go": first plural present subjunctive used as an exhortation, including the speaker in **wē**.
Target: person and inclusion, as well as ending. Both urge an action, but the second is not a first-person "imperative form" in the selected morphological system. **Gān** can also be an infinitive elsewhere; here its subject and use make it finite.

M03. Capability, permission, wish.

Old English	Translation and force
Hē mæg swimman.	He can swim: capability.
Hē mōt swimman.	He may/is permitted to swim: permission.
Swimme hē.	Let him swim/May he swim: the speaker's wish or exhortation.

Target: distinguish lexical modal meaning from inflectional mood. **Mæg** and **mōt** are third singular present indicative, each with the infinitive **swimman**. **Swimme** is third singular present subjunctive. English "may" can translate either permission or a wish; explain the intended sense rather than using that word as a mood test.

M04. An open condition.
Gif hē hæfð męte, hē sęlð ðæm fuglum męte. — "If he has food, he gives the birds food." "If he has food, he will give the birds food" can also convey the open prospective setting; it does not turn the Old English verb into a separately inflected future.
Hæfð and **sęlð** are both present indicative, third singular. **Gif** introduces the condition; the second clause states what follows in that circumstance. **Męte** is accusative in each clause; **ðæm fuglum** is the dative gift-recipient in the second.
Target: gif does not itself require subjunctive morphology. The task presents a real possibility without the specially tentative setting of M05. Calling **hæfð** subjunctive because it follows "if" misses the visible indicative form.

M05. A tentative request.
Gif ðū mē helpe, wē magon ðā dēor bindan. — "If you help me, we can bind the animals." "If you should help me" can make the tentativeness more explicit in English.
Helpe is present subjunctive, second singular, agreeing with **ðū**; **mē** is the dative governed by **helpan**. **Magon** is present indicative, first plural, agreeing with **wē**, and **bindan** is its infinitive; **ðā dēor** is accusative plural.
Target: the condition presents the desired help tentatively; the main clause claims ability conditional on that help. A subjunctive conditional clause does not automatically make its main clause subjunctive. Nor is **helpe** first singular indicative here merely because that form has the same spelling: the subject is **ðū**.

M06. Supplied unreal, nonpast setting.
Gif hē cōme, ic him hulpe. — "If he came, I would help him." The task explicitly supplies the setting that he is not coming.
Cōme is preterite subjunctive, third singular, of **cuman**. **Hulpe** is preterite subjunctive, first singular, of **helpan**; **him** is its dative object. The morphological label "preterite" does not force past time: in this supplied unreal setting these forms refer to a nonpast possibility contrary to the setting.
Target: recognise and explain the provided example. The answer need not create another unreal conditional or infer this reading without the supplied context. "He came and I helped him" would incorrectly assert the events as completed facts.

M07. Hē wolde faran.
Model translation: "He wanted to go" or "He wished to go." The narrator explicitly asserts a past wish, so **wolde** is third singular preterite indicative of **willan**; **faran** is its infinitive.
Target: recognise syncretism without discarding the stated meaning. **Wolde** can also be a singular preterite subjunctive. The spelling alone cannot decide between them, and neither spelling nor mood automatically requires the English auxiliary "would." "He would go" is acceptable only if its context makes the intended past volition clear; it is not a uniquely required translation.

M08. Make the wishes.
Hē leofað → Libbe hē. — "May he live." **Libbe** is third singular present subjunctive, with the selected **libb-** stem.
Wē helpað ðǣm męnn → Helpen wē ðǣm męnn. — "Let us help the man." **Helpen** is first plural present subjunctive. **Ðǣm męnn** remains dative singular, as required by **helpan**.
Target: change the clause force and verb form while preserving reference and government. **Hē libbe** and **Wē helpen ðǣm męnn** are defensible orders in an appropriate wish context. **Help** or **helpað** would instead address a second person; changing the object to accusative **ðone mann** would lose the taught frame.

C. Short composition

C01. "May the birds live."
Model: Libben ðā fuglas.
Target: third plural present subjunctive of **libban**, with nominative plural **ðā fuglas**. The essential meaning is a wish for the birds' life, not an assertion that they live. **Ðā fuglas libben** is possible with the same intended force. **Leofað** is the selected third-singular indicative; **libbað** is the plural indicative or imperative. Neither supplies the requested plural wish.

C02. "Let us help the companions."
Model: Helpen wē ðǣm gefērum.
Target: first plural exhortation and the dative object of **helpan**. The speaker belongs to **wē**, and **ðǣm gefērum** identifies the companions receiving help. Reordering the phrase can be valid. **Helpað** addresses others; accusative **ðā gefēran** would not satisfy this verb's government.

C03. Tentative: "If you (sing.) have food, give it to the birds."
Model: Gif ðū hæbbe męte, sęle hine ðǣm fuglum.
Target: hæbbe, present subjunctive second singular, in the tentative condition; **sęle**, second singular imperative, in the command. **Hine** is accusative masculine singular because it refers to masculine **męte**, even though English calls food "it." **Ðǣm fuglum** is the dative recipient.
Gief hine ðǣm fuglum is a defensible alternative using **giefan**. Indicative **hæfst** can form a valid open condition, but does not meet the expressly tentative target. **Hit** would miss the selected antecedent's grammatical gender; indicative **sęlð** would miss the singular command.

C04. Command to one male addressee: "Be blessed."
Model: Bēo geblētsod.
Target: singular passive command, using the selected participle of **geblētsian**. The stated setting selects imperative **bēo**, although it is formally also a singular subjunctive. **Bēoð** would address more than one person. The supplied unprefixed **blētsode** in the source reading does not establish an independently learned unprefixed production paradigm.

C05. Wish: "Let the work be accomplished."
Model: Bēo ðæt weorc gefręmed.
Target: third singular present subjunctive passive. **Ðæt weorc** is nominative neuter singular; **gefręmed** is the selected past participle of **gefręmman**. **Sīe ðæt weorc gefręmed** is equally suitable. **Is** would assert the state; an active form of **gefręmman** would change the relation between the work and the accomplishing.

C06. "Every bird is above the earth; all trees bear fruit."
Model: Ælc fugol is bufan ðære eorðan; eall trēowu berað wæstm.
Target: singular **ælc fugol**, plural **eall trēowu**, and dative after **bufan**. **Is** agrees with singular **fugol**; **berað** agrees with plural **trēowu** and illustrates the new produce-bearing sense of **beran**. **Wæstm** is accusative singular used for fruit collectively; **wæstmas** can express individual fruits. **Wyrceað wæstm**, "yield fruit," is also a valid alternative. Do not make the subject plural merely because "every" ranges over many birds.

Cook I.4.18 and I.6–7

The English prompts below preserve Cook's wording and original identifiers. The Old English models are new teaching compositions, not transcriptions of an answer supplied by Cook. Word order can vary where the cases and clause force remain clear. The references to number in Cook's parentheses are binding; an unqualified English "you" permits a suitable singular, plural, or explicitly dual referent. [5]

I.4.18. Increase (sing.) and be multiplied.
Model: Weax and bēo gemanigfield.
Target: two commands to one addressee, the second passive. **Weax** is the singular imperative of **weaxan**; **bēo** is singular imperative in this command context. **Gemanigfield** is the uninflected predicate participle and does not impose an unstated gender on the addressee. **Weaxað** and **bēoð** would wrongly address a plural group. Cook's note to Exercise I.4 is "[NOTE.—For adjectives preceded by a demonstrative, see 55.]"; no separate note is attached to item 18.

Cook I.6
I.6.1. The animal lives.
Model: Đæt dēor leofað.
Target: singular subject and weak-III present indicative. **Đæt dēor** is nominative neuter singular; **leofað** is third singular. Although **dēor** also has a zero plural form, the prompt and singular demonstrative determine the number here. **Libbe** would express a different mood in a third-person clause.

I.6.2. The bird flies.
Model: Se fugol flīehð.
Target: nominative masculine singular and the selected third-singular present stem of **flēogan**. Retain the vowel and consonant alternation in **flīehð**. The infinitive **flēogan** cannot serve as the sole finite verb of this assertion.

I.6.3. The tree grows.
Model: Đæt trēo wiext.
Target: nominative neuter singular with third singular indicative **wiext**. Present subjunctive **weaxe** would make a wish in a suitable setting; it would not reproduce this plain assertion. Preserve the selected stem alternation rather than adding an ending mechanically to **weax-**.

I.6.4. The man rules over the cattle of the earth.
Model: Se mann gīemð ðære eorðan nīetena.
Target: gīeman governs a genitive in this sense. **Nīetena** is genitive plural, the cattle ruled over; **ðære eorðan** is a dependent genitive singular, "of the earth," identifying those cattle. The verb agrees with singular **se mann**. An order such as **nīetena ðære eorðan** can preserve the relationships. An accusative direct object after **gīemð** would miss its taught government. English "over" does not require an Old English preposition when the chosen verb already governs the relation.

I.6.5. Let him be over the birds and (over) the beasts.
Model: Bēo hē ofer ðā fuglas and ofer ðā dēor.
Target: third singular present subjunctive and **ofer** with accusative in the authority relation. **Sīe hē** is equally suitable. The second **ofer** may be omitted, as Cook's parentheses indicate: **ofer ðā fuglas and ðā dēor**. Here "over" concerns dominion; it is not a request to apply a mechanical physical-location rule. A second-person imperative would change the person intended. [6]

I.6.6. The stars are above the sea.
Model: Ðā steorran sindon bufan ðǣm sǣ.
Target: plural subject, plural indicative copula, and dative after **bufan**. The course's productive **sǣ** is masculine, hence **ðǣm**. The feminine genitive in the source reading is locally supplied and is not the productive paradigm requested here. Attested feminine uses of **sǣ** are not errors in Old English, but require their own appropriate agreement and evidence.

I.6.7. It is for your food [to you for food].
Model: Hit is ēow tō męte.
Target: dative recipient **ēow**, with **tō męte** expressing the use "for food." The square-bracketed wording is Cook's own help: the model literally says "It is to you for food." **Ðē** is equally valid for one addressee; **inc** is possible for two. Cook does not specify number, so **ēow** is not a compulsory hidden plural target. **Męte** is dative after **tō** here, though other cases share its spelling.

I.6.8. The herb bears seed.
Model: Sēo wyrt birð sǣd.
Target: the produce-bearing sense of **beran**, with a singular subject and accusative object. **Sēo wyrt** is feminine nominative singular; **birð** is third singular present indicative. **Sǣd** is accusative, here collective seed. Translating the verb merely as physical carrying would miss the sense required by a growing herb. A suitable count-plural reading of seed can be defensible where the form and context support it.

I.6.9. The tree yields fruit.
Model: Đæt trēo wyrcð wæstm.
Target: wyrcean in the taught yield/produce sense; **wyrcð** is third singular, and **wæstm** the accusative yield. **Birð wæstm** is a defensible lexical alternative expressing fruit-bearing. **Wæstmas** can refer to individual fruits; collective singular **wæstm** closely matches the model. Do not replace the finite verb with its infinitive or confuse singular **wyrcð** with plural **wyrceað**.

I.6.10. The air is very good.
Model: Đæt lyft is swīðe gōd.
Target: the course's selected neuter **lyft**, singular copula, and strong predicate adjective. **Gōd** is nominative neuter singular; **swīðe** is the invariant adverb "very." The noun's gender must come from the selected lexical entry, not an assumed modern-language gender or a different attested paradigm.

I.6.11. The things are very good.
Model: Đā ðing sindon swīðe gōd.
Target: nominative neuter plural **ðing**, plural **sindon**, and the selected strong neuter plural **gōd**. The adjective's zero ending does not make it singular. The demonstrative belongs to the subject noun phrase; it does not automatically make the separate predicate adjective weak.

I.6.12. The birds were very good.
Model: Đā fuglas wǣron swīðe gōde.
Target: past plural **wǣron**, with strong nominative masculine plural **gōde**. Contrast neuter plural **gōd** in I.6.11. **Sindon** would lose the past time; **gōdan** would substitute a weak adjective form for the selected strong predicate agreement.

I.6.13. The light of the stars was very good.
Model: Đāra steorrena lēoht wæs swīðe gōd.
Target: a dependent genitive plural within a singular subject phrase. **Đāra steorrena** means "of the stars"; **lēoht** is the nominative neuter singular head, controlling **wæs** and **gōd**. An order with the genitive after **lēoht** can preserve the meaning. Making the verb plural because the stars are plural would attach agreement to the wrong noun.

I.6.14. He gave them all trees.
Model: Hē geaf him eall trēowu.
Target: past giving with dative recipient **him**, here plural "them," and accusative plural gift **eall trēowu**. **Eall** agrees with neuter plural **trēowu**. **Hē sealde him eall trēowu** is a defensible alternative with **sęllan**. The spelling **him** also serves singular datives, but the English prompt fixes plural reference in this answer. Do not turn the trees into the recipients.

I.6.15. I give you all things upon earth.
Model: Ic giefe ēow eall ðing on eorðan.
Target: first singular present giving, dative recipient, accusative neuter plural gift, and the location "on earth." **Đē** may replace **ēow** for one addressee; **inc** is appropriate if two are intended. **Ic sęlle** is a defensible lexical alternative. Preserve "all things," not merely one thing, despite the zero plural forms **eall ðing**. The original does not require plural "you."

I.6.16. I call the firmament Heaven.
Model: Ic hāte ðā fæstnesse Heofon.
Target: naming with two accusatives: the entity named, **ðā fæstnesse**, and the name assigned, **Heofon**. **Hāte** is first singular present indicative. **Heofon** is capitalised as the assigned name. It is not a second nominative subject, nor is this sentence a passive "I am called." [6]

Cook I.7
I.7.1. He has dominion.
Model: Hē rīcsað.
Target: rīcsian used absolutely, "exercise dominion, rule." The English phrase need not be reproduced word for word with **habban**. A well-formed equivalent using "has dominion" can preserve the meaning, while the model practises this new verb. **Rīcsien** would be subjunctive plural and would not express the singular assertion.

I.7.2. He blesses the earth.
Model: Hē geblētsað ðā eorðan.
Target: third singular present indicative and an accusative object. The model uses previously taught **geblētsian**. **Ðā eorðan** is feminine accusative singular, not a plural phrase. The reading's plain **blētsode** is separately supplied; its occurrence does not require removal of the prefix in independent composition.

I.7.3. He says thus.
Model: Hē sægð ðus.
Target: the selected third singular **sægð**, with adverb **ðus**, "thus." Preserve the lexical present alternation of **sęcgan**. "Thus" is an adverb here; it does not introduce a relative clause or take an agreement ending.

I.7.4. Now is the season.
Model: Nū is sēo tīd.
Target: temporal **nū**, feminine nominative singular **sēo tīd**, and singular **is**. "Time" can convey the ordinary sense of **tīd**, but the given English "season" is also the required meaning here. **Sēo tīd is nū** can preserve the basic predication; no change to subjunctive mood is licensed merely by initial **nū**.

I.7.5. It was so called.
Model: Hit wæs swā hāten.
Target: past passive with **wesan**, participle **hāten**, and adverb **swā**, "so." **Wæs** gives past singular predication; **hāten** does not itself carry finite tense or person. An attested **gehāten** variant can be defensible. A correct use of inherited passive **hātte** is not bad Old English, but that special paradigm is not this unit's production target. Do not confuse active "it called" with "it was called."

I.7.6. Behold, God rules over the earth.
Model: Efne, God gīemð ðære eorðan.
Target: attention-directing **efne**, explicit subject **God**, and genitive after **gīeman**. **Ðære eorðan** is genitive singular in this frame. English "behold" is rendered by the learned particle, without requiring a new visual-perception command. An accusative earth-phrase after **gīemð** would lose the selected government.

I.7.7. The tree is in the midst of the grass.
Model: Đæt trēo is tōmiddes ðǣm gærse.
Target: tōmiddes with dative in the selected spatial frame. **Đǣm gærse** is dative singular; **ðæt trēo** is the singular subject. The English word "of" is part of "in the midst of"; it does not require a genitive where the taught Old English preposition governs a dative.

I.7.8. The earth is in the midst of the air.
Model: Sēo eorðe is tōmiddes ðǣm lyfte.
Target: feminine nominative **sēo eorðe** as subject, and the selected neuter dative **ðǣm lyfte** after **tōmiddes**. The two nouns have different genders and different syntactic roles. Repeating nominative **eorðe** as an oblique form or selecting a feminine article for this course's **lyft** would miss those distinctions.

I.7.9. The waters are under the firmament.
Model: Đā wæteru sindon under ðære fæstnesse.
Target: plural subject and **under** with dative for this location. **Đære fæstnesse** is feminine dative singular; **ðā wæteru** is neuter nominative plural. The location does not introduce a second subject, and the singular firmament does not control the verb's number.

I.7.10. Birds are the food of the animal.
Model: Fuglas sindon ðæs dēores męte.
Target: plural **fuglas** as subject, plural **sindon**, and predicate noun **męte** with dependent genitive **ðæs dēores**. **Męte** remains singular: a predicate noun need not copy the subject's number. The genitive phrase identifies whose food it is; it does not make the animal the subject. An article before **fuglas** would make the birds more specifically definite than Cook's bare plural.

I.7.11. Divide (plur.) the waters from the waters.
Model: Tōtwǣmað ðā wæteru fram ðǣm wæterum.
Target: second plural imperative **tōtwǣmað**, accusative thing divided, and dative after **fram**. The first water-phrase is accusative plural; the second is dative plural. Although a plural indicative can share the ending **-að**, the command context determines its use here. **Tōtwǣm** would address only one person and miss Cook's explicit number.

I.7.12. God's dominion is over all creatures.
Model: Godes geweald is ofer ealla gesceafta.
Target: singular **geweald**, dependent genitive **Godes**, and the authority use of **ofer** with accusative. **Ealla gesceafta** is feminine accusative plural. **Ealle gesceafta** is also defensible and is attested in Cook's Creation text. Neither plural creatures nor the genitive possessor replaces **geweald** as the head controlling **is**. The form does not demand a plural "dominions" sense. [6]

I.7.13. God hallows each day.
Model: God gehālgað ǣlcne dæg.
Target: keep **God** as the explicit subject, third singular present **gehālgað**, and singular accusative **ǣlcne dæg**. The ending **-ne** agrees with masculine accusative singular **dæg**. "Each" distributes the action over days while retaining a singular noun phrase. Replacing **God** with an unexplained "he" or turning "each day" into plural "all days" loses part of the original prompt.

I.7.14. Let the birds increase and be multiplied.
Model: Weaxen ðā fuglas and bēon gemanigfielde.
Target: coordinated third plural wishes, the first active and the second passive. **Ðā fuglas** supplies the subject of both; **gemanigfielde** has the permitted plural predicate ending. **Sīen** can replace **bēon**, and an uninflected **gemanigfield** can also serve in the verbal predicate. **Weaxað … bēoð** would instead make commands addressed to a plural group; Cook's wording requests a wish about the birds.

I.7.15. Let the men swim in the sea.
Model: Swimmen ðā męnn on ðǣm sǣ.
Target: third plural present subjunctive and the dative location phrase with selected masculine **sǣ**. **Męnn** is nominative plural here, although other cells share the spelling. **Swimmað** could be an assertion or a command in other settings, but would not be the selected third-person wish.

I.7.16. Let the tree bear fruit.
Model: Bere ðæt trēo wæstm.
Target: singular present subjunctive **bere**, nominative singular tree, and accusative fruit in the produce-bearing sense. **Wæstmas** is defensible for individual fruits. **Birð** would assert that the tree bears fruit; **berað** would also lose the requested singular subjunctive. Do not make the subject plural from the collective interpretation of fruit.

I.7.17. He says likewise, Let the light be for a sign.
Model: Hē sægð swilce: "Bēo ðæt lēoht tō tācne."
Target: retain the statement and the quoted wish. **Swilce** is the adverb "likewise"; **ēac swilce** can also convey "also, likewise." **Bēo** is third singular present subjunctive with subject **ðæt lēoht**; **sīe** is an alternative. **Tō tācne** expresses the intended function, with dative **tācne**. The quotation is direct speech, not an unintroduced indirect content clause. A second-person command would misidentify the light's role.

D. Binding the animals

This complete account is new teaching material, not an adapted source passage. The wording is reproduced here so that the interpretation can be checked against the Old English.

> Twēgen męnn wǣron on ðǣm strande. Hīe hæfdon fīf dēor. Se ǣresta mann cwæð: "Gif ðū mē helpe, wē magon ðā dēor bindan." Se ōðer mann cwæð: "Ic wille ðē helpan. Binden wē ðā dēor." Hīe bundon ðā dēor, and se ǣresta mann sealde his gefēran męte. Đā dēor wǣron bunden, and ðā męnn hæfdon męte.

D01. Complete translation.
Two men were on the shore. They had five animals. The first man said, "If you help me, we can bind the animals." The second man said, "I am willing to help you. Let us bind the animals." They bound the animals, and the first man gave his companion food. The animals were bound, and the men had food.
Target: preserve the continuous account: two men, five animals, the request, the agreement to help, the shared action, the gift, and the final result. "I want to help you" or "I will help you" can translate **Ic wille ðē helpan**, provided willingness or undertaking is understood. **Helpe** makes the first condition tentative; ordinary English "if you help me" can convey that without adding "should." The account does not say that the animals are killed, that they are the food, or that the first man binds them alone. Do not add those events to make a different story.

D02. What the two speeches do.

In the first speech, **Gif ðū mē helpe** is the condition: the first man tentatively seeks the second man's help. **Helpe** is present subjunctive, second singular. **Wē magon ðā dēor bindan** claims their ability if that help is given; **magon** is present indicative, first plural, with infinitive **bindan**. In the second speech, **Ic wille ðē helpan** expresses the second man's willingness to help the first. **Wille** is first singular present indicative in this assertion of volition. **Binden wē ðā dēor** then urges a shared action, "Let us bind the animals": **binden** is present subjunctive, first plural.

Target: distinguish contingent help, ability, willingness, and exhortation. The identical spelling of indicative and subjunctive **wille** does not erase the explicit speaker's undertaking. Neither **magon** nor **wille** is a passive auxiliary, and **binden** here is finite rather than the infinitive **bindan**.

D03. Datives and the companion.

Expression	Case and relation	Referent in this account
mē in ðū mē helpe	dative singular, governed by helpan	the first man, speaking
ðē in Ic wille ðē helpan	dative singular, governed by helpan	the first man, now addressed by the second
his gefēran in sealde his gefēran męte	gefēran is dative singular, the gift-recipient; his is a dependent genitive possessor	the first man's companion, the second man

Target: two kinds of dative relation: the person helped with **helpan**, and the person receiving the gift with **sęllan**. **Męte** is the accusative gift, not another recipient. The immediately stated giver **se ǣresta mann** and the speaker sequence make **his** naturally refer to the first man. **His** is not inherently a reflexive form that must always refer to a clause's subject; the identification comes from this narrative.

D04. The final passive and its cause.
The passive is **Đā dēor wǣron bunden**, “The animals were bound.” **Đā dēor** is nominative plural; **wǣron** is third plural preterite indicative; **bunden** is the uninflected past participle in the verbal predicate.
The earlier **Hīe bundon ðā dēor**, “They bound the animals,” establishes the result. **Hīe** refers to the two men who have just agreed to bind them together. The final passive omits an agent phrase, but the preceding active clause supplies the agents and the event. **Wǣron** suits the resulting state here; that contextual reading is not an absolute rule that every **wesan** passive must describe only a state.

R. The fifth day of Creation

The following is the complete selected paragraph of Cook’s *First Book in Old English*, second edition, p. 126, one-based PDF page 142. Its boundaries are **God cwæð ēac swilce** through **se fīfta dæg**, editorially counted prose lines 5–14 on that page, checked against its printed line anchors. These are not a separately printed consecutive line-number series. [7]

The source’s words, spellings, quantities, endings, and punctuation are retained. Line wrapping and the purely line-end hyphens in **swim-/mendu** and **styriend-/licu** are joined. Quotation marks are represented by modern curved double quotation marks. The original superscript note cues are detached from the running text; all their numbers, attachments, and wording are retained below. In particular, **męrgen** and **styriendlicu** have not been silently regularised.

> God cwæð ēac swilce, “Tēon nū ðā wæteru forð swimmendu cynn cucu on līfe, and flēogendu cynn ofer eorðan under ðære heofonan fæstnesse.” And God gescēop ðā ðā miclan hwalas, and eall libbendu fisccynn and styriendlicu, ðe ðā wæteru tugon forð on hiera hīwum, and eall flēogendu cynn æfter hiera cynne; God geseah ðā ðæt hit gōd wæs. And blētsode hīe, ðus cweðende, “Weaxað, and bēoð gemanigfielde, and gefyllað ðære sæ wæteru, and ðā fuglas bēon gemanigfielde ofer eorðan.” And ðā wæs geworden æfen and męrgen se fīfta dæg.

Cook's original notes

Original note	Attachment	Original wording
4	ēac swilce	Ēac swilce = etiam.
5	first forð	Producant = tēon . . . forð.
6	cucu	See cucu.
7	līfe	See līf.
8	first flēogendu	See flēogan, and 61.
9	first ðā after gescēop	Adverb; see 84. 1.
10	hwalas	See hwæl.
11	styriendlicu	Lat. motabilem.
12	ðe	Acc.
13	ðā before wæteru tugon	Nom. plur.
14	tugon	See tēon.
15	forð after tugon	Tugon forð = producerunt.
16	blētsode	See blētsian, and 33.
17	cweðende	See cweðan.
18	Weaxað	See weaxan, and 24.
19	first gemanigfielde	Past part. in nom. plur.

21	bēon	See 193. a.

Local reading help

This help is part of the reading task. Use it when judging the translation and analyses; it is not a list of constructions to reproduce independently.

1. **Tēon … forð / tugon forð:** "bring forth / brought forth." The first is a present third-plural subjunctive with the waters as subject; the second is a preterite third-plural indicative. The phrase's bring-forth sense is supplied separately from the earlier draw/pull sense of **tēon**.
2. **Swimmendu cynn cucu on līfe / flēogendu cynn:** "swimming kinds, alive/living / flying kinds." **Cynn** is neuter accusative plural, the things to be brought forth. The exact participial forms in **-u** are recognised in this passage; irregular **cucu** and the alive-expression are supplied. Do not infer a mechanical **-ende → -endu** production rule for every participle.

3. **Ofer eorðan / under ðære heofonan fæstnesse:** "over the earth / under the firmament of heaven." **Heofonan** is the genitive singular of the source's weak feminine **heofone**; **fæstnesse** is dative after **under**. **Ðære** can agree with the genitive **heofonan** or the dative **fæstnesse**: its spelling permits both. **Eorðan** likewise does not distinguish accusative from dative after spatial **ofer**. Do not demand a uniquely identifiable case where the text does not provide one.

4. **Ðā ðā miclan hwalas / eall libbendu fisccynn and styriendlicu:** "then the great whales / all living and moving kinds of fish." The first **ðā** means "then"; the second is the article. **Fisccynn** is neuter accusative plural. **Libbendu** and **styriendlicu** describe it; the latter's source **-u** is supplied. **And styriendlicu** does not require an invented second noun meaning "moving creatures."

5. **Ðe ðā wæteru tugon forð on hiera hīwum:** "which the waters brought forth according to their forms/kinds." Relative **ðe** is the object; **ðā wæteru** is the subject, as Cook's notes 12–13 confirm. The whole relative construction and **on hiera hīwum** are supplied. **Hīwum** is dative plural of neuter **hīw**.

6. ***Æfter hiera cynne:*** "according to their kind." **Cynne** is dative; this classificatory use of **æfter** is supplied.

7. **God geseah ðā ðæt hit gōd wæs:** "God then saw that it was good." The content clause, its word order, and the situation-reference of **hit** are supplied. Recognising the individual indicative forms does not establish every use of content clauses.

8. **And blētsode hīe, ðus cweðende:** "And [God] blessed them, saying thus." The subject God continues from the preceding clause. Plain **blētsode** is supplied third singular preterite of **blētsian**, distinct from the course's productive **geblētsian**. **Cweðende** describes the same subject's accompanying speech.

9. **Weaxað … bēoð … gefyllað / ðā fuglas bēon gemanigfielde:** the first verbs address a plural group; the last clause expresses a third-person wish about the birds. **Gefyllað** means "fill" here, a supplied sense beyond finish/accomplish. **Ðære sæ wæteru** means "the waters of the sea": **sæ** is source feminine genitive singular, with agreeing **ðære**. This is separate from the earlier productive masculine paradigm.

10. **And ðā wæs geworden ǣfen and męrgen se fīfta dæg:** "And then evening and morning had come to be, the fifth day." The intransitive result formula is supplied. It is not an ordinary transitive passive, and it does not by itself establish a general agreement rule or a complete perfect-tense system. Preserve the source spelling **męrgen**.

R01. Complete translation.

God also said, "Let the waters now bring forth swimming kinds, alive with life, and flying kinds over the earth under the firmament of heaven." And God then created the great whales, and all living and moving kinds of fish which the waters brought forth according to their forms, and all flying kinds according to their kind; God then saw that it was good. And he blessed them, saying thus, "Increase, and be multiplied, and fill the waters of the sea, and let the birds be multiplied over the earth." And then evening and morning had come to be, the fifth day.

Target: all stages of the paragraph: the initial wish, creation of the creatures, God's judgment and blessing, the commands and bird-wish, and the fifth-day close. "Living swimming kinds" can render **swimmendu cynn cucu on līfe** more smoothly than the deliberately close "alive with life." "Kinds of flying creatures" can render **flēogendu cynn**. "According to their kinds" is defensible for the classificatory phrases if the relation is preserved. "Evening and morning came to be" can convey the final formula without importing an English pluperfect system into Old English.

Keep **God** as the subject of creating, seeing, and blessing. The waters are the subject of **tugon**; the relative **ðe** is what they brought forth. Do not turn the birds' final third-person wish into a second-person command merely because it follows commands. A good translation need not resolve the genuine case ambiguities in the spatial phrases beyond the meaning supplied above.

R02. Four finite forms in their clauses.

Source form	Analysis in this passage	Subject/addressee and force
Tēon	present subjunctive, third plural, of tēon	ðā wæteru; “Let the waters bring forth”
Weaxað	second plural imperative of weaxan	the created beings addressed as “you”; “Increase”
bēoð	second plural imperative of bēon, passive auxiliary	the same plural addressees; “be multiplied”
bēon	present subjunctive, third plural, passive auxiliary	explicit subject ðā fuglas; “let the birds be multiplied”

Target: identify finite forms from their clause relations. Initial **Tēon** is not an infinitive despite the shared spelling; it has the nominative subject **ðā wæteru** in an independent wish. **Weaxað** and **bēoð** share spellings with indicative plural forms, but the blessing’s direct address makes them commands here. Final **bēon** has third-person birds as its subject, rather than an unexpressed second-person “you.”

R03. The recognised participial forms.

Occurrence	Noun modified	Required agreement in this occurrence
swimmendu in swimmendu cynn	cynn, object of Tēon … forð	accusative neuter plural
first flēogendu in flēogendu cynn	cynn, coordinated object of Tēon … forð	accusative neuter plural
libbendu in libbendu fisccynn	fisccynn, object of gescēop	accusative neuter plural
second flēogendu in eall flēogendu cynn	cynn, coordinated object of gescēop	accusative neuter plural

Target: all four occurrences of the three given spellings. Their nouns are plural although **cynn** and **fisccynn** have zero plural endings. “The waters” is not the noun modified by **swimmendu**, and the nominative subjects do not supply these participles’ cases. Recognise these exact source forms with the supplied clause help; this task does not ask for unaided formation of other participles or other cells of these lemmas.

R04. Gemanigfielde in the blessing.
Both occurrences are past participles of **gemanigfieldan**, in verbal passive predicates. In **bēoð gemanigfielde**, the subject is the unexpressed plural "you" addressed by the command. In **ðā fuglas bēon gemanigfielde**, the subject is explicit third-person plural **ðā fuglas**.
Target: distinguish the subjects and the finite auxiliaries while explaining the common plural participial ending. Cook identifies the first **gemanigfielde** as nominative plural. Its **-e** is compatible with the permitted plural predicate ending; it does not turn the participle into a finite present verb or an infinitive. An uninflected participle is also permitted in the verbal-predicate system, so the source's ending is not evidence that every passive must carry full attributive gender agreement. The source itself is retained exactly.

R05. Ðære sæ wæteru and on ðæm sæ.
Ðære sæ wæteru means **"the waters of the sea." Wæteru** is the head, accusative neuter plural as the object of **gefyllað**. **Ðære sæ** is the dependent genitive singular; this source use of **sæ** is feminine, and **ðære** agrees with it. **On ðæm sæ** means **"in the sea."** Here **on** governs a dative location phrase, and **ðæm** agrees with the course's previously selected masculine **sæ**.
Target: nominal dependence versus prepositional location. Do not call **ðære sæ** dative merely because the same article spelling can be dative elsewhere. Here its relation to **wæteru** is genitive. Conversely, do not silently substitute the masculine genitive **sæs** for the source's supplied feminine form.

R06. The relative clause and the sequence.
The relative clause begins at **ðe** and ends at **hīwum**:

> **ðe ðā wæteru tugon forð on hiera hīwum** — "which the waters brought forth according to their forms."

Ðe is the accusative relative object; **ðā wæteru** is its clause's nominative subject. The preceding **eall libbendu fisccynn and styriendlicu**, "all living and moving kinds of fish," supplies what is brought forth in this relative clause. The following **and eall flēogendu cynn æfter hiera cynne** resumes the objects of God's creating; it need not be pulled inside the relative clause. God then blessed **hīe**, "them," the created beings just described, including the water creatures and birds. The paragraph ends with **se fīfta dæg**, "the fifth day."
Target: follow the connected reference with the printed help. **Hīe** is the object of **blētsode**, not a new plural subject "they blessed." The source's final **wæs geworden** describes an intransitive coming-to-be; treating it as an ordinary "was made [by someone]" passive would blur the supplied closing formula.

X. Cumulative practice

X01. The object of gīeman.
Model: Se mann gīemð ðāra fugla. — "The man rules over the birds."
Target: the taught sense of **gīeman** governs a genitive. **Ðāra fugla** is therefore genitive plural. An accusative **ðā fuglas** would not satisfy this frame, even though many earlier transitive verbs take accusatives. **Se mann** remains nominative singular and controls third singular **gīemð**. A valid paraphrase with another verb does not answer the requested correction of this verb's government.

X02. Each tree / all trees.
Models: ǣlc trēo, "each tree," nominative neuter singular; **eall trēowu**, "all trees," accusative neuter plural.
Target: ordinary "each/every" here selects a singular noun phrase; **eall** agrees with the plural trees. Both modifiers have zero endings in these particular cells, but the noun's **trēo : trēowu** distinction and the requested syntactic roles remain. Do not infer a new plural meaning of **ǣlc** merely because its complete morphological table has plural cells.

X03. “He can help the man, and he wants to give the birds food.”
Model: Hē mæg helpan ðǣm męnn, and hē wille giefan ðǣm fuglum męte.
Target: indicative capability and volition with their infinitives. **Ðǣm męnn** is dative singular, governed by **helpan**. With **giefan**, **ðǣm fuglum** is the dative plural recipient and **męte** the accusative singular gift. **Mæg** and **wille** have singular subjects; the infinitives keep their own argument relations. An order such as **Hē mæg ðǣm męnn helpan** is defensible. A suitable **sęllan** equivalent can preserve the giving meaning, though the requested analysis of **giefan** is still its dative recipient plus accusative gift. Do not replace **ðǣm męnn** with an accusative simply because **helpan** follows a modal, or call **wille** subjunctive from its spelling alone.

X04. Change the naming subject.
Ic hāte ðā fæstnesse Heofon. — “I call the firmament Heaven.”
Hē hætt ðā fæstnesse Heofon. — “He calls the firmament Heaven.”
Target: the person change requires **hāte → hætt**, first to third singular present indicative. The naming frame stays unchanged: **ðā fæstnesse** is the accusative entity named and **Heofon** the accusative assigned name. **Hætt** is active here; do not replace it with the distinct inherited passive **hātte** or make the name nominative merely because English uses a bare complement.

X05. Command and wish: “be multiplied.”
Second-plural command: Bēoð gemanigfielde. — “Be multiplied,” addressed to more than one person.
Third-plural wish: Bēon hīe gemanigfielde. — “Let them be multiplied.”
Target: bēoð → bēon changes the finite auxiliary from second plural imperative to third plural present subjunctive. **Hīe** makes the wish’s third-person subject explicit. It may be omitted if an independently clear context supplies that subject; there is no rule that every subjunctive must have an overt pronoun. **Gemanigfielde** stays the same because the participle carries neither finite person nor mood. Uninflected **gemanigfield** is a defensible predicate alternative in either clause, provided the auxiliary distinction remains.

X06. Purpose and accomplishment.
Model: Đā gefēran cōmon tō helpanne. Đæt weorc wæs gefręmed.
"The companions came to help. The work was accomplished."
Target: the selected inflected purpose infinitive **tō helpanne**, followed by a preterite passive with **wesan**. The companions are the subject of **cōmon** and the understood helpers. **Đæt weorc** is nominative neuter singular, **wæs** third singular preterite indicative, and **gefręmed** the past participle of **gefręmman**. A plain infinitive may have uses elsewhere, but **tō helpan** does not supply the expressly requested inflected form. A **weorðan** passive can be valid language but misses the chosen auxiliary in this task. The two sentences do not specify an agent phrase for the accomplishment, so none needs to be invented.

Sources

Page references distinguish the printed page from the one-based page number of the registered PDF. Grammatical explanations and all independent-composition models in this key are new teaching material based on the checked forms and constructions; only the identified Cook prompts, Creation paragraph, and original notes are source transcriptions.

[1] A. S. Cook, *A First Book in Old English*, second edition (1895), §§93–95, printed pp. 54–55 / PDF 70–71, for the subjunctive framework; the corresponding lexical systems in §§102–141, printed pp. 59–80 / PDF 75–96, for strong, weak, preterite-present, and anomalous forms. Especially §§114, 122, 126, 138–139 distinguish the lexical stems used in A01–A07. The five newly introduced verbs also use their checked vocabulary entries: **gemanigfieldan** p. 293 / PDF 309, **gīeman** p. 296 / PDF 312, **rīcsian** p. 309 / PDF 325, **tōtwǣman** p. 316 / PDF 332, **wyrcean** p. 324 / PDF 340.

[2] Cook, §§55–62, printed pp. 38–41 / PDF 54–57, especially §57.3 for participial adjective variants and §§61–62 for participle inflection; §179, printed pp. 99–100 / PDF 115–116, for adjectival agreement and predicative use. These support the distinction between an attributive agreement cell and permitted verbal-predicate endings.

[3] Cook, §§187–188, printed pp. 101–102 / PDF 117–118, for passive auxiliaries and the limits of transferring modern tense distinctions.

[4] Cook, §§192–198, printed pp. 103–105 / PDF 119–121, for assertions, independent wishes, conditions, and commands. The unreal nonpast sentence in M06 is new, expressly scaffolded teaching material, not a quotation from Cook.

[5] Cook, *Exercises in Old English* (1895): I.4.18, printed p. 2 / PDF 10; I.6.1–16, printed p. 3 / PDF 11; I.7.1–10, printed p. 3 / PDF 11; I.7.11 crossing printed pp. 3–4 / PDF 11–12; I.7.12–17, printed p. 4 / PDF 12. Original English wording, parentheses, and square brackets are preserved; source line wrapping is removed and the apostrophe in **God's** uses the course's plain-text transcription convention.

[6] Cook, *First Book*, §156(f), printed p. 91 / PDF 107, and vocabulary **gīeman**, printed p. 296 / PDF 312, for the governed genitive; §173, printed p. 97 / PDF 113, for the naming double accusative. The authority use of **ofer** with accusative is directly illustrated in the Creation passage, printed p. 127 / PDF 143, including **ofer ealle gesceafta**. The selected spatial phrases and function phrases are checked against the Creation text and vocabulary. ***Ælc*** has the printed long initial vowel in the *First Book* vocabulary, p. 274 / PDF 290, and in *Exercises*, p. 46 / PDF 54.

[7] Cook, *First Book*, Reader I, "The Creation," fifth-day paragraph, printed p. 126 / PDF 142, editorially counted prose lines 5–14 and original notes 4–21. The reading help is new editorial support; it is kept separate from the exact source text and Cook's original apparatus.

UNIT 8

Answer key

The models use the selected forms of this course. Other attested forms and word orders may be valid Old English. Assess their meaning and grammar separately from compliance with an expressly requested form or construction. Preserve the participants, number, tense and force of the task; do not judge an answer only by its resemblance to the model string.

In paradigm tasks, give the selected table forms. **Hwām** is a documented dative alternative to selected **hwǣm**, not an accusative form. The ordinary relative pattern assigns case from the relative's role within its own clause. The lesson's recognition note on case attraction qualifies that rule; it does not replace the stated target in these compositions. The source reading's local helps remain available, as does **gesęte** in Cook I.8.13. Supplied forms and constructions are not tests of unaided recall. [1]

A. Complete forms

A01. Who? What?

Case	Personal: masculine/feminine	Neuter
Nominative singular	hwā	hwæt
Genitive singular	hwæs	hwæs
Dative singular	hwǣm	hwǣm
Accusative singular	hwone	hwæt

Target: the complete singular nominative, genitive, dative and accusative system. The personal series serves both masculine and feminine referents; there is no separate feminine or plural paradigm. **Hwām** is a valid dative variant. Instrumental **hwȳ/hwon** belongs to the separate reference display and does not replace personal accusative **hwone**. Nominative **hwā** cannot supply every English “who/whom” function.

A02. Hwilc: which?

Requested cell	Masculine	Neuter	Feminine
Genitive singular	hwilces	hwilces	hwilcre
Dative singular	hwilcum	hwilcum	hwilcre
Accusative singular	hwilcne	hwilc	hwilce
Nominative plural	hwilce	hwilc	hwilca

Target: strong agreement in case, number and gender. Feminine genitive and dative singular coincide, but masculine accusative singular **hwilcne** differs from the zero-ending neuter. Neuter nominative plural is **hwilc**, not an assumed **-e** form copied from the masculine.

A03. Which of two? Of what sort?

Requested cell	hwæðer	hūlic
Masculine accusative singular	hwæðerne	hūlicne
Feminine dative singular	hwæðerre	hūlicre
Neuter nominative plural	hwæðer	hūlic
Genitive plural, all genders	hwæðerra	hūlicra

Target: each word's selected strong forms. **Hwæðer** has contracted forms elsewhere, such as **hwæðres/hwæðrum**; that does not license deleting its second vowel in every cell. In particular, distinguish **hwæðerne** from **hwæðerre**. Selected neuter plural **hwæðer** has no **-u**; do not copy the **-u** of **ōðru** mechanically. Documented variant spellings remain distinct from the requested selected table. Cook's **hūlic** keeps the length mark on **ū**.

A04. Ilca: the same.

Case	Neuter plural	Masculine singular
Nominative	ilcan	ilca
Genitive	ilcra	ilcan
Dative	ilcum	ilcan
Accusative	ilcan	ilcan

Target: the two complete requested portions of the weak declension. **Ilca** follows the weak system; the unit assigns no strong alternative. Masculine nominative singular **ilca** is not a general invariant form for “same.” The plural genitive and dative are **ilcra/ilcum**, not singular **ilcan** repeated in every row.

A05. Self.

Nominative singular	Masculine	Neuter	Feminine
Strong	self	self	self
Weak	selfa	selfe	selfe

The strong masculine accusative singular is **selfne**. The strong dative plural, in all three genders, is **selfum**.

Target: distinguish strong from weak agreement and nominative from oblique case. Identical strong nominative forms do not make **self** indeclinable. A masculine accusative referent requires **selfne** in the selected strong pattern, not nominative **self**.

A06. Some, any, each, such.

Requested cell	sum	ǣnig
Masculine accusative singular	sumne	ǣnigne
Feminine genitive singular	sumre	ǣnigre
Neuter nominative plural	sumu	ǣnigu
Dative plural, all genders	sumum	ǣnigum

Requested cell	gehwilc	swilc
Masculine accusative singular	gehwilcne	swilcne
Feminine genitive singular	gehwilcre	swilcre
Neuter nominative plural	gehwilc	swilc
Dative plural, all genders	gehwilcum	swilcum

Target: the same case and agreement distinctions across four lexical stems. Selected **sumu/ǣnigu** contrast with zero-ending **gehwilc/swilc**. Analogical **ǣnig** without **-u** is a documented alternative, but **ǣnigu** is the selected paradigm answer. Retain **i** in the selected **ǣnig-** forms; do not invent contractions from another adjective's pattern. Displaying plural **gehwilc** does not by itself assign every distributive use of that plural.

A07. Līf: life; an individual lived life.

Case	Singular	Plural
Nominative	līf	līf
Genitive	līfes	līfa
Dative	līfe	līfum
Accusative	līf	līf

Target: a complete neuter singular and plural declension, with the individual-life sense used in **ūru līf**, "our lives." The plural refers to the several lives lived by the people denoted by **wē**. It is an ordinary contextual plural, not an unexplained exceptional plural of an invariably abstract noun. The zero ending leaves nominative and accusative plural identical to the corresponding singular forms; agreement and context decide the number.

A08. Ætēowian: appear.

Person and number	Present indicative	Preterite indicative
1 sg.	ætēowie	ætēowode
2 sg.	ætēowast	ætēowodest
3 sg.	ætēowað	ætēowode
1–3 pl.	ætēowiað	ætēowodon

Person and number	Present subjunctive	Preterite subjunctive
1–3 sg.	ætēowie	ætēowode
1–3 pl.	ætēowien	ætēowoden

Target: the full assigned weak-II indicative and subjunctive systems. Each subjunctive row includes all three persons of its number; a dual subject also takes a plural finite verb. Present **-ie/-ien** contrasts with the preterite stem **ætēowod-**. Some forms coincide across moods: **ætēowie** is also first-singular present indicative, and **ætēowode** also first- or third-singular preterite indicative. Analyse the clause, not merely the spelling. This intransitive "appear" is distinct from the transitive verb "reveal, display."

A09. Shining; commands to bless.

Scīnan

Person and number	Present subjunctive	Preterite subjunctive
1–3 sg.	scīne	scine
1–3 pl.	scīnen	scinen

Geblētsian

Person and number	Command
2 sg.	geblētsa
2 pl.	geblētsiað

Target: retain long **ī** in the present subjunctive and short **i** in the preterite subjunctive, which uses the strong preterite plural stem. Do not substitute singular indicative **scān**. Each subjunctive entry covers persons 1, 2 and 3 in its number. The commands are second person; **geblētsiað** also coincides in spelling with a present indicative plural, but command force determines its use here.

Q. Questions

Q01. Yes/no questions.

1. **Hæfð hē scip?** — Does he have a ship?
2. **Sindon ðā męnn gōde?** — Are the men good?
3. **Gesāwe ðū ðæt scip?** — Did you see that ship?

Target: finite verb before its subject, with third-singular present **hæfð**, third-plural present **sindon**, and second-singular preterite **gesāwe** retained. The question does not change these to infinitives or present tense. Another attested question order may be valid, but these models practise the ordinary finite-first pattern; no added **dōn** is required.

Q02. Who, whom, what.

1. **Hwā hæfð ðæt scip?** — **Hwā** is nominative, the subject of **hæfð**.
2. **Hwone siehð se mann?** — **Hwone** is accusative, the person seen; **se mann** is the nominative subject.
3. **Hwæt hæfð se mann?** — **Hwæt** is accusative neuter, the thing possessed; **se mann** is the subject.

Target: ask respectively who possesses the ship, whom the man sees, and what the man possesses. English question auxiliary "does" has no separate word in these models. **Hwæt** also has a nominative use, but its role here is object. **Hwǣm/hwām** would be dative, not the requested direct object "whom."

Q03. Recipient and possessor.

1. **Hwǣm sęlst ðū ðone fisc?** — To whom do you give that fish?
2. **Hwæs scip siehst ðū?** — Whose ship do you see?

Target: hwǣm is dative as the recipient of **sęllan**; **ðone fisc** is the accusative thing given. **Hwæs** is genitive as possessor of **scip**, while the whole phrase **hwæs scip** is the accusative object of **siehst**. Both finite verbs are second-singular present. **Hwām** is a valid dative alternative. Do not make the possessor accusative merely because its noun phrase is an object.

Q04. Which of two? What sort?

1. **Hwæðer mann hæfð ðæt scip?** — Which of the two men has that ship?
2. **Hūlic is ðæt scip?** — What sort of ship is that?

Target: attributive **hwæðer** agrees with nominative masculine singular **mann**; the stated two-man context supplies "of the two." This does not require an unassigned partitive phrase. Predicative **hūlic** is nominative neuter singular, agreeing with **ðæt scip**, and asks about its kind or character. General **hwilc** could ask a related question, but would miss the expressly requested word in either part.

Q05. How and why.

Hū swimð se mann? — How does the man swim? **Hwȳ swimð se mann?** — Why does the man swim?

Target: hū requests manner; **hwȳ** requests reason. Both are invariant question adverbs here, and **swimð** remains third-singular present. Rendering both questions "How?" loses the distinction. Lexical **hwȳ** "why" does not require the learner to construct an instrumental noun phrase.

Q06. Any fish?
Hæfst ðū ǣnigne fisc? — Do you have any fish?
Target: second-singular **hæfst** forms the question without an auxiliary; **ǣnigne fisc** is masculine accusative singular, as required. English "do" supports the English question, but Old English does not require a corresponding **dōn**. A plural-fish question could be meaningful Old English, but would miss the explicit singular **fisc** target here.

N. Pronouns and agreement

N01. Some man; some men.
Sum mann hæfð scip. — A certain man has a ship. **Sume męnn habbað scipu.** — Some men have ships.
Target: sum mann is nominative masculine singular; **sume męnn** is nominative masculine plural. The subjects govern third-singular **hæfð** and plural **habbað**. The objects are accusative neuter singular **scip** and plural **scipu**. "Some man" is also a defensible rendering of **sum mann**. The second sentence does not specify that each man owns exactly one ship; do not add that distribution. **Męnn** is also a dative singular form elsewhere, but its agreement here establishes nominative plural.

N02. Each man; each companion.
Gehwilc mann siehð scip. — Each man sees a ship. **Gehwilc gefēra siehð scip.** — Each companion sees a ship.
Target: singular **gehwilc** with a singular masculine noun, taking third-singular **siehð**. The weak noun **gefēra** has nominative singular **-a**, but this does not make its agreeing interrogative-derived indefinite **gehwilc** weak or plural. "Every man/companion" preserves the sense. A sentence using **ælc** could be grammatical, but would miss the requested **gehwilc**.

N03. Other and another.
Se ōðer mann hæfð ōðer scip. — The other man has another ship.
Target: first **ōðer** is nominative masculine singular with **mann**; second **ōðer** is accusative neuter singular with **scip**. The article does not give this adjective a new weak form. The sentence distinguishes a man and a ship from others already in view; it need not place either second in a numbered series. The earlier ordinal sense "second" is possible in a suitable context, but is not the meaning requested here.

N04. The same man in two cases.
Ic geseah ðone ilcan mann. — I saw the same man. **Ic sęlle ðone fisc ðǣm ilcan męnn.** — I give the fish to the same man.
Target: ðone ilcan mann is masculine accusative singular, the person seen. In the second sentence, **ðone fisc** is masculine accusative singular, the thing given, and **ðǣm ilcan męnn** is masculine dative singular, the recipient. **Ic** is nominative singular in each sentence. Weak **ilcan** is identical in these two oblique cases, but the article and noun differ. Do not retain accusative **ðone mann** for the recipient merely because English uses "the same man" in both clauses.

N05. Subject emphasis and a reflexive object.
Hē self geseah ðæt scip. — He himself saw that ship. **Ic nęrie mē selfne.** — I save myself.
Target: strong nominative masculine singular **self** emphasizes subject **hē** in the first sentence; the object is the ship. In the second, **mē** is an accusative object referring back to subject **ic**, reinforced by masculine accusative singular **selfne** because the specified speaker is male. **Mē** can have dative uses elsewhere, but **nęrian** takes the person saved as its accusative object. A simple reflexive **mē** could be valid language, but omitting **selfne** would miss the explicit target.

N06. Such men.
Swilce męnn sindon gōde. — Such men are good.
Target: swilce is nominative masculine plural of inflected **swilc**, agreeing with **męnn**. It means "such," describing the men. The invariant adverb **swilce** "likewise" has the same spelling in this cell but does not agree with a noun. "The men are likewise good" would select a different function and lose the assigned noun-phrase meaning.

N07. Four noun phrases.

- **Sumra manna** — of some men: masculine genitive plural; both words mark that case and number.
- **Ænigum gefēran** — to any companion: masculine dative singular; strong **ænigum** agrees with weak noun **gefēran**.
- **Đæt ilce scip** — that same ship: neuter accusative singular; weak **ilce** agrees with **scip**, and **ðæt** marks the same features.
- **Swilce lȳtle fuglas** — such little birds: masculine accusative plural throughout; **lȳtle** is strong in this indefinite phrase.

Target: use the requested cases directly. English "of/to" identifies a genitive or dative phrase here; it does not require adding a preposition. **Đæt** could also be nominative in another clause, but the task assigns accusative. Weak plural **lȳtlan** belongs to a different adjective environment, such as Cook I.8.5 with **ðās**.

L. Relative clauses

For L01–L08, distinguish the antecedent's role outside the relative clause from the relative's role within it. Invariant **ðe** has a syntactic role without showing a case ending. With an inflected relative, gender and number follow the antecedent, while the selected ordinary case follows the internal role. Models often put the finite verb late in the relative; this is a useful pattern, not an absolute rule governing every attested clause. [1]

L01. A relative subject.

Se mann, ðe ðæt scip hæfð, is gōd. — The man who has that ship is good.

Target: se mann is the main-clause subject and the antecedent of **ðe**. Within the relative, **ðe** supplies the subject of **hæfð**; **ðæt scip** is its accusative object. The owner is the man, not the ship. An inflected relative could express the same relation, but this task expressly asks for **ðe**.

L02. A relative object.

Ic geseah ðæt scip, ðe se mann hæfð. — I saw the ship which the man has.

Target: retain first-singular past **geseah** in the main clause and third-singular present **hæfð** in the relative. Antecedent **ðæt scip** is the thing seen; within the relative **ðe** is the object possessed, while **se mann** is subject. Making the man the main-clause subject or making the ship the subject of **hæfð** changes the participants and meaning.

L03. Dative antecedent, nominative relative.
Ic sęlle ðone fisc ðǣm męnn, se ðe mē healp. — I give that fish to the man who helped me.
Target: antecedent **ðǣm męnn** is dative singular as recipient of **sęlle**. Relative **se** is nominative masculine singular as subject of **healp**, followed by invariant **ðe**. The person helped, **mē**, is dative because **helpan** governs that case. An invariant **ðe** relative alone could be grammatical, but would omit the requested inflected demonstrative. Copying the antecedent's dative into the relative would miss this task's ordinary internal-case target.

L04. Accusative antecedent, dative relative.
Ic geseah ðone mann, ðǣm ðe ic healp. — I saw the man whom I helped.
Target: ðone mann is accusative singular as object of **geseah**. Relative **ðǣm** is dative masculine singular because the man is the person helped within the relative; **ic** is its nominative subject. English "whom" does not make every Old English personal relative accusative. An accusative **ðone** relative would fail the assigned ordinary government of **helpan**; the recognition exception does not remove that production target.

L05. A singular addressee.
Đū, ðe mē hulpe, sęle mē ðone fisc. — You, who helped me, give me that fish.
Target: hulpe is second-singular preterite indicative, agreeing with personal antecedent **ðū**; **sęle** is a second-singular command to the same person. The first **mē** is the dative person helped, the second the dative recipient of the fish; **ðone fisc** is accusative singular. Third-singular **healp** would lose the selected second-person agreement. The relative "who" does not require interrogative **hwā**.

L06. Two or more addressees.
Gē, ðe mē hulpon, sęllað mē ðone fisc. — You, who helped me, give me that fish.
Target: replace **ðū → gē**, **hulpe → hulpon**, and **sęle → sęllað**. The plural forms address two or more people. Invariant **ðe** and first-singular **mē** remain unchanged, and **ðone fisc** stays singular as requested. A specifically dual pronoun could identify exactly two addressees where that is intended and would still take plural finite forms; it does not justify retaining singular **hulpe/sęle**.

L07. Subject, object, and possessor within a relative.
In **Se mann, ðe ðæt scip hæfð, is mīn gefēra**, the antecedent is nominative singular **se mann**, subject of **is**. Relative **ðe** is subject of **hæfð**; **ðæt scip** is its object. The meaning is "The man who has that ship is my companion."
In **Ic geseah ðæt scip, ðe se mann hæfð**, the antecedent is accusative singular **ðæt scip**, object of **geseah**. Relative **ðe** is object of **hæfð**; **se mann** is its subject. The meaning is "I saw the ship which the man has." **Ðe** does not change its spelling to mark either internal role.
Se mann, ðæs scip ic geseah, is gōd. — The man whose ship I saw is good. Antecedent **se mann** is nominative masculine singular, the main-clause subject. Relative **ðæs** is genitive masculine singular: it refers to the man as possessor of **scip**. **Scip** is accusative neuter singular, the thing seen by subject **ic**. Thus **ðæs** and **scip** need not share a case; possession within an object phrase requires genitive **ðæs**, not an accusative relative copied from the object noun.
Target: identify the internal function separately in all three clauses. The genitive example does not involve case attraction: the man is nominative outside the relative, while the relative is genitive because it marks possession within it.

L08. Correcting an overbroad rule.
An inflected relative does **not always** have its antecedent's case. The ordinary production rule is to choose case from its role within the relative clause. In L03, dative recipient **ðǣm męnn** is followed by nominative relative subject **se**. In L04, accusative object **ðone mann** is followed by dative **ðǣm**, governed by **helpan** in the relative.
Target: retain agreement in gender and number while separating those two case decisions. Attested **case attraction** sometimes gives a relative the antecedent's case instead; the lesson presents this as a recognition exception. It neither makes the learner's "always" rule correct nor licenses ignoring the explicit ordinary-case target of L03 and L04. Conversely, claiming that case attraction is impossible would overstate the ordinary rule.

C. Lexical constructions

C01. Finish and fill.

Hīe gefyllað ðæt weorc. — They finish the work. **Hīe gefyllað ðā wæteru.** — They fill the waters.

Target: the same plural present form **gefyllað**, with distinct lexical senses selected by the objects: finish/accomplish the work; fill the waters. **Ðæt weorc** is accusative neuter singular, **ðā wæteru** accusative neuter plural. Familiarity with the first sense does not erase the second. Retain the course's selected plural **wæteru** rather than silently making "the waters" singular.

C02. Having in one's control.

Se mann hæfð eall nīetenu on his gewealde. — The man has all the animals in his control. **Hafa eall nīetenu on ðīnum gewealde.** — Have all the animals in your control.

Target: eall nīetenu is the accusative neuter plural entity controlled. The idiom uses **on + dative gewealde**. Third-person possessor **his** is invariant, while **ðīnum** agrees in dative neuter singular with **gewealde**. **Hafa** is the command to one person; the plural command would miss that stated addressee. Previously taught **dēor** can also express "animals" with the appropriate neuter plural agreement. A literal spatial rendering with "under" does not supply this control idiom.

C03. Living one's life.

Ic libbe mīn līf. — I live my life. **Wē libbað ūru līf.** — We live our lives.

Target: mīn līf is accusative neuter singular; **ūru līf** is accusative neuter plural. **Libban** here takes a cognate accusative, an object expressing the life lived. The individual-life sense permits the plural. First-singular **libbe** changes to first-plural **libbað**, and the selected agreeing possessive **ūru** confirms plural **līf**, despite its unchanged noun ending. **Ūre** is not the selected neuter plural possessive cell for this task.

C04. Appears; let it appear.

Drȳgnes ætēowað. — Dry land appears. ***Ætēowie drȳgnes.*** — Let dry land appear.

Target: third-singular present indicative **ætēowað** states the event; third-singular present subjunctive **ætēowie** expresses the jussive. The dry land is subject, not an object being displayed by someone else. Although **ætēowie** also spells a first-singular indicative form, its third-singular subject and jussive force determine its use here. Do not replace "let" with an unrelated permission verb or replace intransitive "appear" with transitive "reveal."

Cook I.8

The English prompts below retain Cook's complete set and numbering. Where English leaves the addressee's number or the number of "fish" open, the model makes one choice; a defensible alternative must carry that choice through its agreement. An expressly singular command or supplied singular form still fixes the number addressed. [2]

I.8.1. Your works are good.
Ēowru weorc sindon gōd.
Target: nominative neuter plural **ēowru weorc**, plural **sindon**, and strong predicate neuter plural **gōd**. The model addresses several people; **Đīn weorc sindon gōd** is valid for one possessor because Cook's "your" does not decide that number. The number of possessors does not make the works singular. Selected neuter plural **ēowru** differs from **ēowre**, and zero-ending predicate **gōd** differs from masculine plural **gōde**.

I.8.2. His tree is fruit-bearing.
His trēo is æppelbære.
Target: invariant possessor **his**, neuter singular **trēo**, singular **is**, and predicate adjective **æppelbære**. The essential meaning is that his tree bears fruit. Selected **trēo** and documented **trēow** are spelling alternatives, not different numbers; use the selected form when reproducing the course paradigm. Do not add a possessive agreement ending to **his**.

I.8.3. Thou art the man.
Đū eart se mann.
Target: second-singular **ðū eart** and nominative predicate **se mann**. This identifies the addressee as the man. Accusative **ðone mann** would treat the predicate as though "be" took a direct object; third-singular **is** would lose the stated person.

I.8.4. This year is the fourth.
Đis gēar is ðæt fēorðe.
Target: nominative neuter singular **ðis gēar** and the definite ordinal **ðæt fēorðe**, with weak neuter singular **fēorðe**. "Fourth" identifies a place in a sequence; it is not the cardinal "four." Masculine **se** would not agree with neuter **gēar**.

I.8.5. God made these little birds.
God geworhte ðās lȳtlan fuglas.
Target: third-singular preterite **geworhte** and accusative masculine plural **ðās lȳtlan fuglas**. The demonstrative gives the ordinary descriptive adjective its weak form **lȳtlan**. The essential meaning is God's making these particular small birds. **Gescēop** can also express creation here; it must retain the singular past subject and plural object. Strong **lȳtle** is the selected form in an indefinite phrase such as "such little birds," not this definite environment.

I.8.6. He created me likewise.
Hē gescēop mē ēac swilce.
Target: third-singular preterite **gescēop**, accusative object **mē**, and the adverbial "also/likewise" expression **ēac swilce**. The speaker is the person created. Invariant adverb **swilce** here is not an inflected adjective modifying **mē**. A valid rendering with the established "likewise" adverb alone need not be rejected for omitting the reinforcing "also."

I.8.7. Our cattle (plur.) see the grass.
Ūru nīetenu sēoð ðæt gærs.
Target: nominative neuter plural **ūru nīetenu**, plural present indicative **sēoð**, and accusative neuter singular **ðæt gærs**. The cattle, not the grass, do the seeing. The selected possessive is **ūru** in this neuter plural cell. **Sēon** is an infinitive or a subjunctive form in other contexts; it does not supply the present indicative required by this statement.

I.8.8. We live our lives (168.1).
Wē libbað ūru līf.
Target: first-plural present **libbað** with the cognate accusative **ūru līf**, accusative neuter plural. The several people live their respective lives; **līf** has the assigned individual-life sense. Its zero plural ending does not make it singular. **Ūru**, rather than an assumed **ūre**, is the selected neuter plural possessive. Cook's reference is **168.1**, the cognate-accusative discussion.

I.8.9. His seeds grow in the earth.
His sǣd weaxað on ðǣre eorðan.
Target: nominative neuter plural **sǣd**, plural present **weaxað**, and dative singular **ðǣre eorðan** after locative **on**. **His** is invariant. The unchanged noun ending in **sǣd** does not override the plural meaning and verb; third-singular **wiext** would describe one seed instead.

I.8.10. The animals rest (themselves).
Đā nīetenu geręstað hīe.
Target: plural subject **đā nīetenu**, plural present **geręstað**, and accusative reflexive **hīe**, referring to those same animals. Previously learned **dēor** is also a valid neuter plural noun for "animals" here. The parenthetic "themselves" points to the established reflexive construction; **hīe** is not a new group of animals receiving an action from the first. Emphatic **self** is not required merely because English uses a reflexive pronoun.

I.8.11. Fill the waters.
Gefyllað đā wæteru.
Target: the command of **gefyllan** in its "fill" sense, with accusative neuter plural **đā wæteru**. The model addresses several people. **Gefyl đā wæteru** is equally defensible for one addressee, since the English prompt does not fix the command's number. Do not confuse the number commanded with the number of waters, or substitute the "finish the work" sense.

I.8.12. Let dry land appear.
Ætēowie drȳgnes.
Target: present subjunctive **ætēowie** with third-singular subject **drȳgnes**, giving jussive "let … appear." The statement **Drȳgnes ætēowað** means "Dry land appears" and changes the force. The source and dictionary identify the intransitive weak-II verb **ætēowian**; the transitive "reveal, display" verb does not express this same subject relation. A different defensible order must preserve that mood and relation.

I.8.13. Place (gesęte) the fish in the sea.
Gesęte đone fisc on đǣm sǣ.
Target: use the supplied singular command **gesęte**, the accusative thing placed, and the locally supplied **on + dative** placement frame. The model takes "fish" as singular; **Gesęte đā fiscas on đǣm sǣ** is valid for plural fish, also allowed by the English wording. The supplied command still addresses one person. The attested comparable placement uses a dative location; the fact that someone places an object does not by itself force accusative after **on**. Neither the prefixed command nor the whole verb system is an unaided-recall requirement.

I.8.14. Have (sing.) all spirits under [in] your control.
Hafa ealle gāstas on ðīnum gewealde.
Target: singular command **hafa**; accusative masculine plural **ealle gāstas**, the spirits controlled; **on ðīnum gewealde**, with dative neuter singular possessive and noun. The bracketed "in" points to the control expression, not to a separate physical location below the addressee. Plural **habbað** would miss the explicitly singular command, and masculine plural **ealle** must not be copied from the neuter plural **eall** used with animals in C02.

I.8.15. Let the stars shine in the heavens.
Scīnen ðā steorran on ðǣm heofonum.
Target: present subjunctive plural **scīnen**, with the stars as third-plural subject, and dative plural location **on ðǣm heofonum**. This is a jussive concerning the stars, not a command addressed to an expressed second person. Indicative **scīnað** would state that they shine; preterite subjunctive **scinen**, with short **i**, would change the tense. Retain the present long vowel and subjunctive plural **-en**.

I.8.16. I say indeed, Bless all men.
Ic cweðe sōðlice: "Geblētsiað ealle męnn."
Target: first-singular present "I say," the adverb **sōðlice** "indeed," and a direct quoted command with accusative masculine plural **ealle męnn**. The model addresses several people within the quotation. **Geblētsa ealle męnn** is a valid command to one person; the English does not specify that number. Previously taught **sęcge** is also a valid reporting verb. Keep the distinction between the speaker of **ic cweðe** and the people addressed by "Bless"; the infinitive alone would not supply the command.

I.8.17. Thou, who madest life, bless me.
Đū, ðe līf gescēope, geblētsa mē.
Target: second-singular antecedent **ðū**, relative subject **ðe**, second-singular preterite **gescēope**, and singular command **geblētsa**. **Līf** is the accusative object of creation; **mē** is the accusative person to be blessed. **Geworhtest** "madest" is also defensible in the relative if the person and meaning are preserved. Third-singular **gescēop** would lose the selected agreement with **ðū**, and plural **geblētsiað** would contradict the explicitly singular "Thou."

D. The ship and the fish

D01. Complete translation.

Three men and one ship are on the shore. A certain man says, “Who is the man who has that ship?” His companion says, “The man is my companion. He has the fish which we see.”
First man: “To whom do you give that fish?”
His companion: “I give it to the man who helped me.”
First man: “Which ship does he have?”
His companion: “He has the little ship which you saw.”
Target: preserve the opening scene and all six spoken turns. The first speaker asks his companion about the third man, the ship's possessor; the answering companion identifies that man as his own companion. **Wē** includes the speaker in “we see,” and **ðū** in the final relative addresses the first man. The fish are plural in **ðā fiscas**, but the later **ðone fisc/hine** selects one fish from that group; English “the fish” can conceal this number change. The recipient is identified as the man who helped the answering speaker. The account gives no names or further reason for the transfer, so do not invent them.
“A man” or “some man” can render **sum mann**. English “that” or “the” may render the demonstrative/article according to the context; either must preserve the references. The final **gesāwe** is past “saw,” not present “see.”

D02. The three direct questions.

1. **Hwā is se mann, ðe ðæt scip hæfð?** — Who is the man who has that ship? **Hwā** is nominative in a copular identification question: it asks the identity of the man described by **se mann** and its relative. It can be described as the interrogative predicate nominative; it is not an accusative object of **is**.
2. **Hwæm sęlst ðū ðone fisc?** — To whom do you give that fish? **Hwæm** is dative, asking for the recipient of **sęlst**; **ðone fisc** is the object given.
3. **Hwilc scip hæfð hē?** — Which ship does he have? **Hwilc** is accusative neuter singular, agreeing with object **scip**; it asks which ship is possessed. Subject **hē** is nominative.

Target: distinguish identification, recipient and object selection. A question word's position at the beginning does not make it nominative; the third question's **hwilc** happens to have the same nominative and accusative neuter spelling. The **ðe** inside the first question introduces a relative, not a fourth direct question.

D03. The answer beginning Ic sęlle.
Ic sęlle hine ðǣm męnn, se ðe mē healp means “I give it to the man who helped me.”

- **Hine:** accusative masculine singular, the fish being given; masculine agreement follows **fisc**, although English naturally uses “it.”
- **Ðǣm męnn:** dative masculine singular, the recipient in the main clause.
- **Se:** nominative masculine singular, the subject of **healp** inside the relative; it refers to that same man.
- **Mē:** dative singular, the person helped, governed by **helpan**; it refers to the answering speaker.

Target: the relative identifies the recipient by his previous help to the speaker. He receives the fish and previously gave help; the speaker gives the fish and previously received help. Making **se** dative solely because **ðǣm męnn** is dative would miss the selected internal-case pattern. Translating **hine** as another man here would break the fish reference.

D04. Two little ships.
Hē hæfð twā lȳtlu scipu, ðā ðe ðū gesāwe. — He has two little ships which you saw.
Target: twā, **lȳtlu** and **scipu** are accusative neuter plural; **lȳtlu** is strong in the phrase headed by the numeral without the earlier article. Inflected relative **ðā** is likewise accusative neuter plural, the object of **gesāwe**, followed by unchanged **ðe**. Main subject **hē** still takes **hæfð**, while relative subject **ðū** still takes second-singular **gesāwe**. Do not pluralize either finite verb merely because the ships are plural. Retaining an explicitly definite phrase could support a different adjective environment, but agreement and the requested two ships must remain consistent.

R. The merchant and his merchandise

These answers use the local help supplied with the exact four-turn excerpt. The translation includes the full selected passage; the following commodity catalogue is outside it. The nautical vocabulary, content clause, passive and closing participial construction remain supported reading material. [3]

R01. Complete translation.
Teacher: “What do you say, merchant?”
Merchant: “I say that I am useful both to the king and to nobles, and to wealthy people, and to all the people.”
Teacher: “And how [are you useful]?”
Merchant: “I board my ship with my cargo, and row across stretches of sea, and sell my goods, and buy valuable things which are not produced in this country. And I bring the goods here to you at great risk across the sea, and sometimes I suffer shipwreck, with the loss of all my things, barely escaping alive.”
Target: preserve all four speakers' turns and the full sequence of claims: usefulness to the named groups; boarding with cargo; sea travel; selling; buying valuable things not produced locally; delivery here to the addressees; risk; occasional shipwreck and loss; and escape while alive. “The wealthy,” “the whole people,” “this land,” “merchandise” and “with difficulty escaping alive” are defensible English alternatives. The words restored in brackets explain the teacher's supplied elliptical question; they are not additional words in the Old English.
Cīepe means “sell” here and **bycge** “buy”; reversing them changes the trade. Actual singular **hit** collectively refers to the goods, so English “it,” “the goods” or contextual “them” can preserve the reference without altering the source. **Ēow** is plural “you”; **hider** means “hither/here” as destination. The present forms describe the merchant's activity, not a past voyage invented by the translator. The closing words say that he barely escapes alive, not that he dies or escapes easily.

R02. The teacher's questions.
Hwæt sægst ðū, mangere? — What do you say, merchant? **Hwæt** is the accusative thing said, the object of second-singular **sægst**; **ðū** is subject. Supplied **mangere** is the merchant's nominative form used in direct address, not another subject or the thing said.
And hū? — And how? The local help restores “How [are you useful]?” from the preceding answer. Invariant **hū** asks how the merchant supplies the usefulness he has just claimed; his account of trade answers it.
Target: identify these two direct questions and their different requested information. The content **ðæt** in **Ic sęcge ðæt …** introduces what the merchant says; it does not turn his answer into another question. No general independent construction of address or elliptical questions is demanded beyond the supplied forms and explanation.

R03. The relative about the goods.
Đā on ðissum lande ne bēoð ācęnnede means "which are not produced in this country." Its antecedent is **ðing dēorwierðu**, "valuable things," accusative neuter plural as the object of **bycge**. Relative **ðā** is nominative neuter plural, the subject of the passive within its clause. **Bēoð** is third-plural present, agreeing with those things; supplied **ācęnnede** is the plural past participle "produced."
Target: gender and number link relative and antecedent, but their cases differ because their clause roles differ. The goods are bought in the main clause and are not produced locally in the relative. Do not treat **ðā** as an accusative object merely because its antecedent is accusative, or omit **ne** and say that the goods are produced locally. The exact negative passive is supplied; no full productive system of **ācęnnan** is being tested.

R04. Trade and destination.
The merchant boards his ship with his cargo and rows across stretches of sea. He sells his goods (**cīepe mīn ðing**) and buys valuable things (**bycge ðing dēorwierðu**) that are not produced in this land. He brings that merchandise **here to you**, the people he addresses (**tōgelǣde ēow hider**).
Target: buying explains how he obtains the valuable goods; delivery explains their destination. The text does not say that he manufactures them himself. Risk during the crossing, shipwreck, loss of goods and barely escaping alive are the dangers of this activity, not additional ways of acquiring the cargo. **Ofer sǣ** means "across the sea" here. Its noun has identical accusative and dative singular forms: an accusative extent analysis is contextually motivated, but the written **sǣ** alone does not prove a unique case, and this task does not demand one.

R05. Dangers and survival.
Any two of these expressions, correctly explained, answer the first part:

- **Mid miclum plihte** — at great risk; the crossing puts the merchant in danger.
- **Forlidennesse ic ðolie** — I suffer shipwreck; **hwīlum** makes this an occasional experience.
- **Mid lyre ealra ðinga mīnra** — with the loss of all my things; the danger includes the loss of his merchandise or possessions.

Unēaðe cwic ætberstende means "barely escaping alive." **Unēaðe** gives the difficulty; **cwic**, nominative masculine singular, describes the merchant as alive; supplied present participle **ætberstende** expresses his accompanying escape. This adds survival by a narrow margin to the account of loss. "Escaping with difficulty, alive" preserves the meaning. Translating **unēaðe** as "easily," taking **cwic** as a description of the cargo, or making the escape a passive action would lose the supplied construction.

X. Questions, reference and clause relations

X01. Which men have the ships?
Hwilce męnn habbað ðā scipu, ðe ðū gesāwe? — Which men have the ships that you saw?
Target: hwilce męnn is nominative masculine plural, the interrogative subject of **habbað**. Antecedent **ðā scipu** is accusative neuter plural, its object. Within the relative, invariant **ðe** is the object of **gesāwe**, while singular **ðū** is the subject and determines the second-singular preterite. Neither the plural men nor the plural ships makes that relative subject plural. The question asks which men, not which ships.

X02. Another fish to the same man.
Ic sęlle ōðerne fisc ðǣm ilcan męnn, se ðe mē healp. — I give another fish to the same man who helped me.
Target: ōðerne fisc is accusative masculine singular, with strong **ōðer** in its "another" sense. **Ðǣm ilcan męnn** is the dative recipient, with weak **ilcan**. Relative **se** is nominative masculine singular, subject of **healp**, followed by **ðe** as expressly requested; **mē** is the dative person helped. An invariant relative alone could be grammatical but would miss the required inflected member. Making **se** dative by copying the recipient's case misses the selected clause analysis.

X03. Any little birds?
Siehst ðū ænige lȳtle fuglas? — Do you see any little birds?
Target: second-singular present **siehst** and accusative masculine plural **ænige lȳtle fuglas**. **Lȳtle** has strong agreement in this indefinite phrase. ***Ænigne fisc*** was singular in Q06; the plural birds here require **ænige**, not that masculine singular **-ne** ending. Weak **lȳtlan** belongs to a different definite environment. An added English-style question auxiliary is unnecessary.

X04. Each companion himself.
Gehwilc gefēra self geseah ðæt scip. — Each companion himself saw that ship.
Geseah gehwilc gefēra self ðæt scip? — Did each companion himself see that ship?
Target: singular masculine **gehwilc gefēra**, strong nominative masculine singular **self** emphasizing that subject, and third-singular preterite **geseah**. Making the finite verb initial forms the model yes/no question without changing its tense or person. **Selfne** would be an accusative form and would not agree with this subject; the object remains **ðæt scip**, not the companion himself.

X05. A relative and a quoted jussive.
Se mann, ðe ðæt scip hæfð, cwið: "Ætēowie drȳgnes." — The man who has the ship says, "Let dry land appear."
Target: relative **ðe** is subject of third-singular **hæfð**; **ðæt scip** is the possessed object. Main-clause **cwið** says what the man does, while the direct quotation has third-singular jussive subjunctive **ætēowie** with subject **drȳgnes**. Third-singular **sægð**, from previously taught **sęcgan**, is also valid for "says." Retain the requested direct quotation rather than changing it to an unassigned indirect content construction. Indicative **ætēowað** would change "Let … appear" to "appears."

X06. Two uses of ðæt.
In **ðæt scip**, **ðæt** is an agreeing demonstrative/article with neuter singular **scip**. In the account's phrases governed by "have" or "see," that noun phrase is accusative. It identifies the ship as "the/that ship."
In **ðæt ðe ðū gesāwe**, **ðæt** is the inflected relative member, accusative neuter singular because the ship is the thing **ðū** saw; invariant **ðe** follows it. Its antecedent is the little ship in the main clause. The whole relative means "which/that you saw."
Target: identical spelling does not give the two occurrences an identical grammatical function, and neither is the content conjunction in these examples. The first determines a noun; the second refers back to an antecedent and fills the object role within a relative. The separately supplied content **ðæt** in the merchant's **Ic sęcge ðæt …** is another use, not a reason to label every **ðæt** a conjunction.

Source and editorial notes

[1] The models and explanations are new teaching material. The selected pronouns and relative strategies follow Cook, *A First Book in Old English*, second edition (1895), §§86–89, with the strong and weak endings in §§57–60; supporting checks include Wright §§463–464 and 468–471 and Fulk §§35 and 77. The ordinary internal-case target is qualified by the attested recognition exception of case attraction. The lexical and verbal systems retain the lesson's selected forms and limits.

[2] Cook, *Exercises in Old English* (1895), I.8, printed p. 4 / PDF p. 12, all seventeen items. The English prompts are exact source material; the Old English models are new answers. Cook, *First Book*, §168.1 supplies the cognate-accusative construction. The appearance witness is on printed p. 124 / PDF p. 140, with the dictionary entry **ætēowian** on p. 275 / PDF p. 291. The supplied placement and taught control frames have witnesses on printed p. 125 / PDF p. 141, line 15, and p. 127 / PDF p. 143, line 9 respectively.

[3] The merchant excerpt is exact source material from Cook, *First Book*, printed pp. 129–130 / PDF pp. 145–146: the three unnumbered dialogue lines on p. 129 are counted editorially; p. 130 uses printed lines 1–7. The translation covers the four selected turns through **unēaðe cwic ætberstende**. The local helps, rather than an assumed complete lexical or grammatical system, support the additional forms and constructions. Cook's original notes remain historical source paratext in the learner chapter; their antiquarian questions are not additional assigned exercises here. PDF page numbers in these notes are one-based.

UNIT 9

Answer key

These models use the course's selected forms. Other documented forms, word orders and translations can be valid. Preserve the participants, number, time and force of the actual task, and distinguish a grammatical answer from one that meets an explicitly requested construction. The Old English answers and explanations are new teaching material; Cook's English prompts retain their original wording. [1]

For a requested report or dependent question, use the stated mood. An indicative content clause can assert a fact; a subjunctive report does not declare its content false. A past reporting verb does not impose an automatic tense change on every subordinate clause. The infinitive after commanding or perceiving has no person ending: its actor and its own object have separate roles even when both are accusative.

In paradigm tasks, give every labeled cell, including identical forms. The ivory, living-creatures and 365-days expressions stay supplied, as do the source reading's local helps; they are not tests of unaided recall.

F. Complete forms and their use

F01. Sunu.

Case	Singular	Plural
Nominative	sunu	suna
Genitive	suna	suna
Dative	suna	sunum
Accusative	sunu	suna

Target and interpretation: The complete selected u-stem paradigm has dative singular **suna**, contrasting with nominative/accusative **sunu**. Plural **suna** serves three cases, but dative plural is **sunum**. Cook documents **-u/-o** variants outside genitives and dative plural, and later a-stem **sunes/sunas**; these remain valid where applicable, distinct from this requested table. All vowels in the selected forms are short. [2]

F02. Bycgan: complete indicative.

Person and number	Present	Preterite
1 sg.	bycge	bohte
2 sg.	bygest	bohtest
3 sg.	bygeð	bohte
1–3 pl.	bycgað	bohton

Target and interpretation: Give all twelve cells, with irregular dental preterite **bohte**. Present **bycge/bycgað** contrasts with selected **bygest/bygeð**; do not preserve **cg** mechanically in every present form. Preterite first and third singular coincide, while second singular adds **-st**. Shared plural forms still represent three labeled persons. A regular past invented from **bycgan** misses the lexical stem.

F03. Commands.

Person and number	rōwan	bycgan
2 sg.: one addressee	rōw	byge
2 pl.: two or more	rōwað	bycgað

Target and interpretation: Give both commands of each verb. **Rōw** lacks indicative second-singular **-st**; **byge** is the selected singular command, not first-singular indicative **bycge**. The plural commands use the present plural stems. No separate dual command is required. These models omit the subject; the separately attested postposed-pronoun construction is outside this target.

F04. Rīce and geðeahtend.

Case	Rīce: singular	Rīce: plural
Nominative	rīce	rīcu
Genitive	rīces	rīca
Dative	rīce	rīcum
Accusative	rīce	rīcu

Case	Geðeahtend: singular	Geðeahtend: plural
Nominative	geðeahtend	geðeahtend
Genitive	geðeahtendes	geðeahtendra
Dative	geðeahtende	geðeahtendum
Accusative	geðeahtend	geðeahtend

Target and interpretation: Give two complete eight-cell systems. In **rīce**, lexical **-e** gives way to **rīcu/rīca/rīcum**; Cook also permits inserted **i/e** in these plurals, including **rīciu/rīcia**. **Geðeahtend** has selected endingless nominative/accusative plural, genitive plural **-ra**, dative plural **-um**. Documented nominative/accusative plural **-e** and rarer **-as** are alternatives. This agent noun does not require an inflecting participle's adjective endings. [2]

F05. Kingdoms and counsellors.

Đāra geðeahtendra rīcu. — The kingdoms of the counsellors.

Ic sęlle ðone fisc ðǣm geðeahtendum. — I give the fish to the counsellors.

Target and interpretation: Geðeahtendra is genitive plural dependent on nominative plural **rīcu**, with agreeing **ðāra**. The head has no separate article, as requested. **Geðeahtendum** is dative plural recipient of **sęlle**, with dative **ðǣm**; accusative singular **ðone fisc** is the thing given. Substituting genitive for the recipient would lose that relation. Documented **rīciu** is a valid plural variant.

A. Content and reported statements

A01. Three functions of ðæt.

- **(a) Ðæt scip is gōd: ðæt** is the article/demonstrative, nominative neuter singular, agreeing with subject **scip**.
- **(b) Ic wāt, ðæt ðæt scip gōd is:** the first **ðæt** is an invariant content conjunction, without case. The second is the nominative neuter singular article/demonstrative agreeing with the content clause's subject **scip**.
- **(c) Ðæt scip, ðæt ðū hæfst, is gōd:** the first **ðæt** again agrees with nominative subject **scip**. The relative **ðæt** is accusative neuter singular, the object of **hæfst** inside its own clause; **ðū** is that clause's subject.

Target and interpretation: Distinguish agreement with a noun from a relative pronoun's own clause role. The relative and its antecedent agree in gender and number here, but their cases differ. Identical spelling neither makes all five occurrences conjunctions nor gives the conjunction an accusative case.

A02. An asserted fact.

Ic wāt, ðæt ðā scipu ǣmtig sindon. — I know that the ships are empty.
Target and interpretation: The ships' emptiness is asserted as fact: indicative plural **sindon** agrees with **ðā scipu**. Predicate **ǣmtig** is selected strong neuter nominative plural, despite its endingless appearance. Singular **is** would lose the number. A contextual subjunctive can be valid elsewhere but misses the requested indicative; **ðæt** alone does not demand subjunctive.

A03. A present report.

Se fiscere sægð, ðæt hē twēgen fiscas hæbbe. — The fisherman says that he has two fish.
Target and interpretation: The fisherman remains the possessor when quoted **ic** becomes reported **hē**. **Twēgen fiscas** is accusative masculine plural and **hæbbe** the requested present subjunctive. Retaining **ic** would ordinarily make the reporting speaker the possessor. Indicative **hæfð** can be defensible reporting but misses this target; subjunctive does not imply a lie.

A04. A simultaneous past report.
Se mann sægde, ðæt hē twēgen fiscas hæfde. — The man said that he had two fish.
Target and interpretation: The same man possessed the fish at the time of his past speech. Requested **hæfde** is preterite subjunctive; the same spelling also occurs in the indicative, so the task and construction establish its analysis. The example teaches simultaneous past report, not a rule forcing a tense change after every past reporting verb.

A05. Grammar and the requested mood.
Hē sægð, ðæt hē gōd sīe. — He says that he is good.
This meets the requested subjunctive target. The given indicative sentence is not necessarily ungrammatical.
Target and interpretation: Give **sīe** for the requested present subjunctive singular, while recognizing that indicative **is** can be grammatical. Correct the target mismatch without declaring all indicative reports invalid or saying that subjunctive proves the reported claim false.

Q. Dependent questions

Q01. Subject and recipient inside a question.
(a) Ic wāt, hwā ðone fisc hæbbe. — I know who has the fish. **Hwā** is nominative, the subject of **hæbbe**.
(b) Ic wāt, hwǣm ðū ðone fisc sęlle. — I know to whom you give the fish. **Hwǣm** is dative recipient; **ðū** is subject and the fish the accusative object.
Target and interpretation: The question words take their cases within their own clauses: **hwā** is subject of **hæbbe**, while **hwǣm** receives what **ðū** gives. Matrix **wāt** does not make both accusative. The selected subjunctives express dependent questions; they do not change "who has" into "whom you have."

Q02. A dependent object question.
Saga mē, hwæt ðū hæbbe. — Tell me what you have.
Target and interpretation: Singular **saga** takes dative recipient **mē**. Accusative **hwæt** remains the thing possessed; **ðū** remains the addressee and governs subjunctive **hæbbe**. Indicative **hæfst** can be valid in another context but misses the requested mood. No English-like auxiliary is added to the dependent question.

Q03. A dependent yes/no question.
Saga mē, hwæðer se mann twēgen fiscas hæbbe. — Tell me whether the man has two fish.
Target and interpretation: Invariant **hwæðer** introduces whether the possession is true; it does not ask which of two men possesses the fish. Subject **se mann** takes singular subjunctive **hæbbe**, with accusative **twēgen fiscas**. Inflecting **hwæðer** as an adjective changes the function; indicative **hæfð** misses the explicit mood target.

Q04. Which of two, or whether?
(a) Hwæðer mann is ðīn gefēra? — Which of the two men is your companion? **Hwæðer** is nominative masculine singular, agreeing with **mann**.
(b) Saga mē, hwæðer se mann ðīn gefēra sīe. — Tell me whether the man is your companion. Here **hwæðer** is invariant whether.
Target and interpretation: The first question selects one man from the stated two; the second asks whether an identification holds. "Which man" does not translate the second question. The invariant conjunction has no masculine nominative agreement, although its spelling coincides with that adjective cell.

Q05. Whom you help.
Ic wāt, hwæm ðū helpe. — I know whom you help.
Target and interpretation: Helpan governs dative **hwæm** inside the question. **Helpe** is present subjunctive second singular, without indicative stem mutation. Documented dative **hwām** is also valid. Accusative **hwone** misses the government; indicative **hilpst** misses the requested mood.

I. Infinitive complements and object predicates

I01. Who carries the fish?
(a) Ic wille ðone fisc beran. — I want, or am willing, to carry the fish.
(b) Ic hāte hine ðone fisc beran. — I command him to carry the fish.
Target and interpretation: The finite verbs agree with **ic**; the carrier is the speaker in (a), the expressed accusative **hine** in (b). The fish is what is carried. An infinitive does not gain a person ending from its actor. These are separately selected lexical frames, not a rule for all verbs.

I02. Reporting the command.
Se fiscere hēt hīe ðone fisc beran. — The fisherman commanded them to carry the fish.
Target and interpretation: Hēt is past command; accusative plural **hīe** names the two companions. Their original direct command **berað** becomes plain infinitive **beran**. The finite verb agrees with the singular fisherman, not the plural actors. Retaining **berað** would leave a direct-command form inside the requested reported-command construction.

I03. Perceiving an action.
Ic gesēo ðā męnn ðone fisc beran. — I see the men carrying the fish.
Ðā męnn is the accusative plural actor of **beran**; **ðone fisc** is that infinitive's accusative singular object.
Target and interpretation: Finite first-singular **gesēo** agrees with **ic**. The accusative men are the observed actors; the accusative fish is the infinitive's object. Both phrases have the same case but different functions. A participle or separate finite clause would miss the prescribed infinitive construction.

I04. Good as an object predicate.
God geworhte ðone mann gōdne. — God made the man good.
God geworhte ðā męnn gōde. — God made the men good.
Target and interpretation: Strong **gōdne/gōde** is accusative masculine singular/plural, agreeing with the object. The article within that object phrase does not make this separate predicate weak. Nominative **gōd** or weak **gōdan** misses the selected agreeing predicate; the finite verb stays singular because God is the subject in both sentences.

I05. Naming and commanding.
Hē hēt ðone mann cyning. — He called, or named, the man king.
Hē hēt ðone mann gān. — He commanded the man to go.
Target and interpretation: The complements identify the two senses of **hātan**; identical **hēt** does not settle the meaning alone. **Cyning** is a predicate accusative naming the object, whereas **gān** is a plain infinitive whose actor is the man. Neither complement should be analyzed as the other grammatical category.

W. Present unreal wishes

W01. A ship wished for now.
Hæfde ic ān scip! — Would that I had one ship!
Target and interpretation: The ship is wished for now: first-singular preterite subjunctive **hæfde**, with accusative neuter singular **ān scip**. **Ēalā, hæfde ic ān scip!** is also valid. A statement about a formerly possessed ship changes the meaning; a volitional "I want" construction would miss the explicitly requested subjunctive.

W02. One spelling, two settings.
(a) Ic hæfde ān scip. — I had one ship.
(b) Hæfde ic ān scip! — Would that I had one ship!
Target and interpretation: In (a), **hæfde** is first-singular preterite indicative; in (b), first-singular preterite subjunctive expressing a present unreal wish. The shared form alone cannot prove mood or force past time. Initial verb position suits this wish but is not a universal test for subjunctive.

Cook Group II, Exercise 9

The four complete Cook sets retain their original prompts. A model may select one defensible interpretation where English leaves number or reference open; the notes identify consequential alternatives. [3]
Cook II.9.1. Sparks fly.
Fȳrspearcan flēogað.
Target and interpretation: Plural **fȳrspearcan** is the subject of present plural **flēogað**. The weak noun's **-an** can have other analyses elsewhere, but is nominative plural here. Singular **flīehð** would change the sparks into one spark; no article is required for the indefinite plural.

Cook II.9.2. The house is empty.
Đæt hūs is æmtig.
Target and interpretation: Nominative neuter singular **đæt hūs** takes singular **is** and strong predicate **æmtig**. The article agrees with the noun; it does not make a separate predicate adjective weak. The sentence states emptiness now, not in the past.

Cook II.9.3. The ships are empty.
Đā scipu sindon ǣmtig.
Target and interpretation: Nominative neuter plural **đā scipu** takes plural **sindon** and selected strong neuter plural **ǣmtig**. The predicate shares its spelling with the singular in II.9.2; the article, noun and finite verb show the number change. Do not infer singular solely from the adjective's zero ending.

Cook II.9.4. The merchant sells needles, awls, fish-hooks, and plowshares.
Se mangere cīepð nǣdla, ǣla, anglas, and sulhscearas.
Target and interpretation: Singular **cīepð** means sells, with four accusative plural objects: feminine **nǣdla/ǣla**, masculine **anglas/ sulhscearas**. **Angel** loses its medial vowel in **anglas**. **Bygeð** means buys and would reverse the merchant's action. The objects' plurality does not make the singular merchant's verb plural.

Cook II.9.5. The blacksmith makes plowshares in his smithy.
Se smið gewyrcð sulhscearas on his smiððan.
Target and interpretation: Singular **gewyrcð** takes accusative plural **sulhscearas**. Location **on his smiððan** contains dative singular weak feminine **smiððe**. Invariant **his** identifies the male possessor, rather than agreeing with the smithy. The man works in the smithy; this is not motion into it.

Cook II.9.6. The oil and the wine are good.
Se ęle and ðæt wīn sindon gōd.
Target and interpretation: The coordinated subjects take plural **sindon**. Masculine **ęle** and neuter **wīn** have their own articles, **se/ðæt**. Selected predicate **gōd** is neuter plural for this mixed inanimate group. Do not copy masculine plural **gōde** mechanically from one conjunct; the unit teaches a normal pattern without claiming exceptionless historical agreement.

Cook II.9.7. The fisherman rows over the sea.
Se fiscere rēwð ofer sǣ.
Target and interpretation: Singular **fiscere** takes third-singular present **rēwð**. **Ofer sǣ** gives the crossing. The selected extent/route analysis can be accusative, but **sǣ** has identical accusative and dative singular spellings, so its surface alone cannot establish case. **Rōwað** would not be this singular indicative.

Cook II.9.8. The carpenter supports his son.
Se trēowwyrhta āfētt his sunu.
Target and interpretation: The carpenter supports or maintains his son: singular **āfētt**, invariant possessor **his**, accusative singular **sunu**. Genitive/dative **suna** would miss the son's object role. The separately supplied **fēt** is not substituted by assuming the prefix can simply be removed.

Cook II.9.9. The tailor bought the needle.
Se sēamere bohte ðā nǽdle.
Target and interpretation: Past singular **bohte**, not present **bygeð**, expresses bought. **Ðā nǽdle** is accusative feminine singular, the needle bought; **ðā** is not invariably plural. The irregular preterite must be learned, rather than invented as a regular past from **bycgan**.

Cook II.9.10. The bellows blow.
Ðā bęlgas blāwað.
Target and interpretation: The selected plural **ðā bęlgas**, referring to the bellows, takes present plural **blāwað**. A documented single-instrument reading with singular **se bęlg blǽwð** can be defensible with consistent number and agreement; English final **-s** alone does not settle Old English number.

Cook II.9.11. The hammer smites,
Sēo slęcg sliehð.
Target and interpretation: Feminine singular **sēo slęcg** takes **sliehð**, in the explicitly taught absolute sense strike or make a stroke. No object need be invented. **Bīett**, from **bēatan**, is a defensible hammer-striking alternative supported by Cook's discussion. The English source's final comma is preserved above; the new model can end with a full stop.

Cook II.9.12. Let us seek the kingdom of God.
Sēcen wē rīce Godes.
Target and interpretation: First-plural present subjunctive **sēcen** with **wē** expresses the inclusive exhortation. **Rīce** is accusative singular, the kingdom sought; **Godes** is genitive. **Godes rīce** is also a defensible order. Plural command **sēcað** addresses others and would not itself express the requested “let us.”

Cook II.9.13. He will not live with the blacksmith.
Hē ne wille libban mid ðǣm smiðe.
Target and interpretation: Ne wille expresses refusal or unwillingness, followed by plain infinitive **libban**. **Mid ðǣm smiðe** names the accompanying person in the dative. The intended sense is "he is unwilling to live with the blacksmith," not a newly taught future auxiliary. A finite living verb in place of **libban** would break the volitional complement.

Cook II.9.14. We had rather live [To us it is preferable to sojourn] with the farmer than with the tailor.
Ūs is lēofre wician mid ðǣm ierðlinge ðonne mid ðǣm sēamere.
Target and interpretation: Dative experiencer **ūs**, neuter comparative **lēofre**, singular **is** and plain infinitive **wician** realize Cook's bracketed frame. The alternatives are parallel **mid + dative** phrases. English "had rather" does not assert past time here; **wæs** would change the preference's time. Natural alternative wording must still satisfy the stated frame.

Cook II.9.15. Gold is better (66) than tin.
Gold is bętere ðonne tin.
Target and interpretation: Neuter singular **gold** takes comparative **bętere**; nominative **tin** supplies the parallel standard after **ðonne**. Keep Cook's short **i** in **tin**. Masculine **bętera** would not agree with the gold; plain **gōd** would lose the comparison. The printed 66 is a grammar reference, not translation content.

Cook II.9.16. The carpenter makes a hole.
Se trēowwyrhta gewyrcð ðyrel.
Target and interpretation: The singular carpenter takes **gewyrcð**, with accusative neuter singular **ðyrel** as the thing made. The indefinite English article does not require inserting cardinal **ān**. The noun retains its medial vowel; a fabricated reduced stem would miss its lexical diagnostics.

Cook Group II, Exercise 10

Cook II.10.1. The tree is useful to the carpenter.
Đæt trēo is behēfe ðǣm trēowwyrhtan.
Target and interpretation: Neuter subject **ðæt trēo** takes agreeing predicate **behēfe**, with dative singular recipient **ðǣm trēowwyrhtan**. The tree is useful to the carpenter; the carpenter is neither subject nor an accusative object. This lexical dative frame is explicitly taught, rather than inferred from the English adjective.

Cook II.10.2. Our horses have fodder.
Ūru hors habbað fōdor.
Target and interpretation: Nominative neuter plural possessive **ūru** agrees with plural **hors**, followed by plural **habbað**. **Fōdor** is the accusative singular mass noun fodder. The horses' plural has no added ending; do not infer singular from **hors** or make the verb singular. The possessive means our, not their.

Cook II.10.3. O priest, read the Gospel.
Ēalā mæsseprēost, rǣd ðæt godspell.
Target and interpretation: Nominative-shaped singular **mæsseprēost** is direct address; **rǣd** commands that one person to read accusative **ðæt godspell**. **Ēalā** renders "O." Indicative **rǣtt** would state that someone reads; plural **rǣdað** would address several people instead of the named singular priest.

Cook II.10.4. Buy (sing.) wine and oil.
Byge wīn and ęle.
Target and interpretation: Expressly singular command **byge** takes two accusative singular material nouns, **wīn** and **ęle**. Two objects do not require plural command **bycgað**. The meaning is buy; substituting a selling verb would change the transaction.

Cook II.10.5. O good fellows, row over the waters.
Ēalā gōdan gefēran, rōwað ofer ðā wæteru.
Target and interpretation: Direct-address plural **gōdan gefēran** has a weak adjective and takes plural command **rōwað**. **Ofer ðā wæteru** gives the route over the waters, using accusative neuter plural in this model. The fellows are addressed, not objects; strong **gōde** would miss the selected weak-adjective address pattern.

Cook II.10.6. Her son is rich.
Hiere sunu is welig.
Target and interpretation: Invariant **hiere** means her. Nominative singular **sunu** takes singular **is** and masculine predicate **welig**. The possessor's gender does not make the son or predicate feminine. Genitive/dative **suna** would miss the son's subject case.

Cook II.10.7. Ply (sing.) your trade.
Begā ðīnne cræft.
Target and interpretation: Singular command **begā** takes accusative masculine singular **ðīnne cræft**, your trade. **Ðīnne** agrees with the possessed noun while retaining reference to one addressee. **Begāð** misses Cook's explicit singular command; **ðīn** is not the selected masculine accusative form.

Cook II.10.8. God gave us his Gospel.
God sealde ūs his godspell.
Target and interpretation: Preterite singular **sealde** has dative recipient **ūs** and accusative object **his godspell**. God gives the Gospel; we receive it. Invariant **his** refers to God. Present **sęlð** changes the time, and a genitive pronoun would not supply the recipient relation.

Cook II.10.9. The farmer practises agriculture.
Se ierðling begǣð eorðtilðe.
Target and interpretation: Singular **begǣð** takes accusative feminine singular **eorðtilðe**, the occupation practised. Nominative **eorðtilð** appears later as an answer naming agriculture, but is not this object form. The farmer engages in agriculture; he does not travel physically toward it.

Cook II.10.10. The service of God [God's service] is better (66) than other occupations.
Godes ðēowdōm is bętera ðonne ōðre cræftas.
Target and interpretation: Godes ðēowdōm means service directed to God, an explicitly taught objective-genitive relationship. Masculine singular **ðēowdōm** takes **bętera**; nominative plural **ōðre cræftas** supplies the comparison after **ðonne**. Do not make the predicate plural from the comparison noun, or translate the service as work performed by God.

Cook II.10.11. Which of you holds (om. the) chief place?
Hwilc ēower hielt ealdorscipe?
Target and interpretation: Substantival nominative **hwilc** selects one member of the group named by personal genitive plural **ēower**, which of you. Singular **hielt** takes accusative **ealdorscipe**, without an article as requested. Here **ēower** is a personal genitive, not an agreeing possessive. Retain the selected short-vowel spelling **hielt**.

Cook II.10.12. My gain is little.
Mīn gestrēon is lȳtel.
Target and interpretation: Nominative neuter singular **mīn gestrēon** takes strong neuter predicate **lȳtel**. The gain is little or small; comparative less would change the assertion. The possessive agrees with the singular gain. A weak form copied from a definite attributive phrase would miss the predicate construction.

Cook II.10.13. My labor is great.
Mīn gedeorf is micel.
Target and interpretation: Nominative neuter singular **mīn gedeorf** takes **is** and strong predicate **micel**. The statement concerns the magnitude of my labor, not a comparison or the number of workers. Keep the possessive's reference to the speaker.

Cook II.10.14. I sold ivory and silk.
Ic cīepte elpes bān and sīdan.
Target and interpretation: First-singular preterite **cīepte** means sold. Supplied **elpes bān** has genitive dependent **elpes** and accusative head **bān**; weak feminine **sīde** supplies accusative **sīdan**. **Bohte** would mean bought and reverse the transaction. The complete ivory expression stays available; no general rule for inventing material compounds is tested.

Cook II.10.15. O, were I king of this people!
Ēalā, wǣre ic cyning ðisses folces!
Target and interpretation: First-singular preterite subjunctive **wǣre** expresses an unreal present wish, with nominative predicate **cyning** and genitive neuter singular **ðisses folces**. It does not assert that the speaker formerly was king. Optional **ēalā** reinforces the wish. The predicate's case follows its role, even though **cyning** has identical nominative and accusative spellings.

Cook Group II, Exercise 11

Cook II.11.1. The monks have food and drink.
Đā munucas habbað męte and dręnc.
Target and interpretation: Nominative plural **ðā munucas** takes **habbað**, with accusative singular mass nouns **męte/dręnc**, food and drink. The number of objects does not determine the finite agreement. One monk and a singular verb would change the specified participants.

Cook II.11.2. Settle [quell] your disputes.
Gestillað ēowru geflīt.
Target and interpretation: The model addresses several people: plural **gestillað** and accusative neuter plural **ēowru geflīt**, your disputes. English leaves addressee number open; **Gestil ðīn geflīt** is valid for one person. Match command and possessive consistently. Endingless **geflīt** is plural here; settle has the hinted sense quell, not establish a residence.

Cook II.11.3. He suffered shipwreck.
Hē ðolode forlidennesse.
Target and interpretation: Third-singular preterite **ðolode** takes accusative feminine singular **forlidennesse**. The **-ness-** stem appears before the noun ending. He suffered shipwreck; the sentence does not say he caused it or died in it. Present **ðolað** would change the time.

Cook II.11.4. He abandoned his wife.
Hē forlēt his wīf.
Target and interpretation: Singular preterite **forlēt** takes accusative singular **his wīf**, the wife abandoned. **His** refers to the male subject; **wīf** is grammatically neuter despite referring to a woman. Present **forlætt** would describe a present abandonment rather than the stated past event.

Cook II.11.5. Be what [that] you (sing.) ought to be.
Bēo ðæt ðe ðū scealt wesan.
Target and interpretation: Singular command **bēo** is followed by bounded predicative **ðæt ðe**, what or that which. Inside the relative, **ðū** takes **scealt** with plain **wesan**. Relative **ðæt** is a nominative predicate, not an object of being or an invariant content conjunction. Prior **wes** is a defensible singular command alternative; plural **bēoð** misses the specified number.

Cook II.11.6. They do not wish to be what they ought to be.
Hīe ne willað wesan ðæt ðe hīe sculon wesan.
Target and interpretation: Plural **hīe ne willað** expresses unwillingness, followed by **wesan** and the bounded predicative relative. Within that relative, plural **hīe** takes **sculon** with another **wesan**. One infinitive completes wishing, the other obligation. Neither takes plural finite endings. Preserve obligation, rather than converting it into a simple future prediction.

Cook II.11.7. He went aboard the ship with his wares.
Hē āstāg ðæt scip mid his hlæstum.
Target and interpretation: Preterite singular **āstāg** takes direct accusative ship **ðæt scip**; dative **mid his hlæstum** names accompanying wares. Documented **āstāh** is a defensible past-singular variant. Do not make the ship's case follow **mid**, which governs the wares, or replace the direct-object frame with an unexplained destination preposition.

Cook II.11.8. O good workmen, ply your trades.
Ēalā gōdan wyrhtan, begāð ēowre cræftas.
Target and interpretation: Weak plural **gōdan** accompanies nominative-shaped addressed **wyrhtan**, followed by plural **begāð**. **Ēowre cræftas** is accusative masculine plural, your trades. Singular **begā** would not address the plural workmen as a group. The address adjective and possessive have different environments and endings.

Cook II.11.9. I tell you (sing.), the shoemaker buys awls, and the fisherman buys (fish-) hooks.
Ic sęcge ðē, se scēowyrhta bygeð æla and se fiscere bygeð anglas.
Target and interpretation: First-singular **sęcge** takes dative singular **ðē**; the direct/paratactic statement then has two singular **bygeð** clauses. ***Æla/ anglas*** are the goods bought. Cook prints no "that," and this route needs none. A clearly signaled conversion to an indirect report can be valid but is not forced; substituting selling would change the meaning.

Cook II.11.10. Sometimes he reads, because he is wise.
Hwīlum hē rætt, for-ðām hē wīs is.
Target and interpretation: Frequency adverb **hwīlum** modifies present singular **rætt**; **for-ðām hē wīs is** gives the factual reason. Wisdom is the reason, not the result. **Wīs** agrees with singular **hē**, and indicative **is** suits the asserted cause. The conjunction does not automatically demand subjunctive; sometimes does not mean always.

Cook II.11.11. The king buys horses.
Se cyning bygeð hors.
Target and interpretation: Singular **se cyning bygeð** takes accusative plural **hors**, the horses bought. Heavy neuter **hors** has identical singular and plural nominative/accusative spellings; the English task determines plural here. The king is one person, so the object's plurality does not call for **bycgað** as his verb.

Cook II.11.12. Righteousness is better than gold.
Rihtwīsnes is bętere ðonne gold.
Target and interpretation: Feminine subject **rihtwīsnes** takes weak comparative nominative feminine singular **bętere**. Neuter **gold** is the parallel nominative standard after **ðonne**. Predicate agreement follows righteousness, not gold; masculine **bętera** misses that agreement. The sentence compares value rather than identifying the two things.

Cook II.11.13. They struck me.
Hīe slōgon mē.
Target and interpretation: Nominative plural **hīe** takes preterite plural **slōgon**; **mē** is the accusative person struck. This is the object-taking sense of **slēan**. Singular **slōh** loses the plural subject. Syncretic accusative/dative **mē** does not make the object's role dative under this verb.

Cook II.11.14. The farmer beats him.
Se ierðling bīett hine.
Target and interpretation: The singular farmer takes present **bīett** and accusative masculine singular **hine**, the person beaten. Keep the selected present stem mutation and dental contraction. Plural **bēatað** does not agree with this subject; nominative **hē** does not supply the object.

Cook II.11.15. We suffer the loss of copper and tin.
Wē ðoliað æres and tines lyre.
Target and interpretation: Present plural **ðoliað** takes accusative singular **lyre**, the loss suffered. Genitives **æres/tines** identify the materials lost and precede the head. The speakers suffer loss of those metals, not simply the metals themselves. Preserve the long vowel in copper **ær** but Cook's short **i** in **tin/tines**.

Cook II.11.16. The princes of the earth go aboard their ships.
Eorðan ealdormęnn āstīgað hiera scipu.
Target and interpretation: Genitive **eorðan** depends on nominative plural **ealdormęnn**, governing plural **āstīgað**. **Hiera scipu** is accusative plural, their ships, with invariant possessor **hiera**. Explicit **ðære** with genitive **eorðan** is also defensible. The princes' plural uses **mann/męnn** in the final member, not a mechanically added **-as**.

Cook II.11.17. The priest benefits (164. e) the laymen.
Se mæsseprēost fręmeð ðæm ceorlum.
Target and interpretation: Singular **fręmeð** in the benefit sense governs dative plural **ðæm ceorlum**. The priest is subject; the laymen are beneficiaries. Accusative **ðā ceorlas** would miss this lexical government. Cook's **164. e** refers to the dative rule and is not additional content to translate.

Cook Group II, Exercise 12

Cook II.12.1. The counsellor is wiser (64) than the warrior.
Se geðeahtend is wīsra ðonne se beorn.
Target and interpretation: Singular **se geðeahtend** takes weak comparative nominative masculine singular **wīsra**. Nominative **se beorn** supplies the parallel standard after **ðonne**. The adjective means wiser, not merely wise. The new **-end** agent is not an agreeing verbal participle; the warrior is not an accusative object.

Cook II.12.2. The elephant is larger than the horse.
Se elp is māra ðonne ðæt hors.
Target and interpretation: Masculine singular **se elp** takes weak comparative **māra**. **Ðæt hors** is the parallel nominative neuter singular comparison. The comparative agrees with the elephant, not the horse. **Micel** would express large without retaining larger.

Cook II.12.3. God created all (om. the) fishes in (om. the) sea.
God scēop ealle fiscas on sǣ.
Target and interpretation: Preterite singular **scēop** takes accusative masculine plural **ealle fiscas**, with location **on sǣ**. Both article omissions follow Cook's controls. Neuter plural **eall** would not agree with masculine fishes. Prior **gescēop** is also defensible creation vocabulary if the time and case relations are retained.

Cook II.12.4. The cattle seek fodder.
Ðā nīetenu sēcað fōdor.
Target and interpretation: Nominative neuter plural **ðā nīetenu** takes present plural indicative **sēcað**, with accusative singular mass noun **fōdor**. The cattle seek; the fodder is sought. **Sēcað** shares a spelling with the plural command, but the expressed third-person subject and statement make it indicative here.

Cook II.12.5. God commanded the earth to bring forth grass.
God hēt ðā eorðan gærs tēon forð.
Target and interpretation: Past command **hēt** takes accusative feminine singular actor **ðā eorðan** and plain **tēon** with **forð**, bring forth. **Gærs** is the infinitive's accusative object. Earth and grass are both accusative but have different functions: earth produces, grass is produced. An independent finite wish would miss the reported-command frame.

Cook II.12.6. On the third day God gathered the waters that were under the heavens.
On ðone ðriddan dæg gegaderode God ðā wæteru ðe under ðǣm heofonum wǣron.
Target and interpretation: Temporal **on ðone ðriddan dæg** is accusative masculine singular with weak ordinal. Singular **gegaderode** agrees with **God**; **ðā wæteru** is the accusative object. Within the relative, **ðe** is subject of plural **wǣron**, with dative location **under ðǣm heofonum**. Do not make the relative verb singular from main subject **God**.

Cook II.12.7. Let the earth bring forth living creatures (the verb precedes).
Tēo sēo eorðe libbende gesceafta forð.
Target and interpretation: Initial present subjunctive singular **tēo** expresses the third-person wish, followed by nominative **sēo eorðe**, meeting "the verb precedes." Supplied **libbende gesceafta** is feminine accusative plural, using the documented feminine **-e** participial variant. Prior neuter **libbendu** does not agree. No English-like let verb or independent recall of the supplied participle is required.

Cook II.12.8. God made man good (173).
God geworhte ðone mann gōdne.
Target and interpretation: Geworhte takes accusative **ðone mann** and strong masculine accusative predicate **gōdne**. God makes; goodness is predicated of the man. Bare **mann** is also defensible for generic man. Nominative **gōd** or weak **gōdan** misses the selected object-predicate agreement; the article does not make the separate predicate weak.

Cook II.12.9. He is (om. the) light that gives light to (ālīehtan) all things.
Hē is lēoht ðe eall ðing ālīehteð.
Target and interpretation: Bare nominative predicate **lēoht** follows Cook's omission instruction. Relative **ðe** is subject of singular **ālīehteð**; **eall ðing** is accusative neuter plural, the things illuminated. English "gives light to" does not make them dative under **ālīehtan**. Retain the selected uncontracted present ending and the relative clause.

Cook II.12.10. Some of them (151) were rich, and some were wise.
Hīe sume wǣron welige, and sume wǣron wīse.
Target and interpretation: Selected apposition **hīe sume**, both nominative plural, means some of them. Second **sume** supplies the subject of **wǣron wīse**. Strong masculine plural **welige/wīse** agrees with the people. **Sume hiera** is a valid genitive-partitive alternative, but **hīe** itself is not genitive. No decision about overlap between the wealthy and wise groups is required.

Cook II.12.11. The night has many stars.
Sēo niht hæfð manige steorran.
Target and interpretation: Singular **sēo niht hæfð** takes accusative masculine plural **manige steorran**. **Manige** is ordinary strong attributive many; **steorran** is the weak noun's plural. The object does not make the night or verb plural. Singular many-a, substantival many and a new genitive quantity construction are not assigned.

Cook II.12.12. The light shineth in (on) darkness (plur.).
Đæt lēoht scīnð on ðīestrum.
Target and interpretation: Singular **ðæt lēoht scīnð** has dative plural location **on ðīestrum**. The selected darkness noun is plural, as Cook reminds the learner; do not invent a singular to match English. Present **scīnð** retains long **ī**, unlike the short-vowel preterite plural/subjunctive stem.

Cook II.12.13. The year has three hundred and sixty-five (78) days.
Đæt gēar hæfð ðrēo hund and fīf and siextig daga.
Target and interpretation: Singular **ðæt gēar hæfð** takes the complete supplied 365-days expression. Within the help, **ðrēo** counts neuter **hund**; **fīf and siextig** gives five and sixty; **daga** is genitive plural. This is a declared rule adaptation, not an exact quotation or a full higher-numeral assignment. Masculine **ðrīe** does not replace the supplied neuter form.

Cook II.12.14. The carpenter has two sons.
Se trēowwyrhta hæfð twēgen suna.
Target and interpretation: Singular carpenter and **hæfð** take accusative masculine plural **twēgen suna**. Selected **sunu** has plural **suna**, not an obligatory **-as** ending. Masculine **twēgen**, not neuter/feminine **twā**, agrees with sons. Documented later **sunas** can be valid language while **suna** remains the assigned u-stem form.

Cook II.12.15. The soldier has eight houses.
Se cęmpa hæfð eahta hūs.
Target and interpretation: Singular **se cęmpa hæfð** takes invariant preposed **eahta** and accusative neuter plural **hūs**. The heavy neuter plural adds no **-u**; its identical singular spelling does not erase the eight houses. The soldier is one person, so the verb stays singular.

Cook II.12.16. The peril was great.
Se pliht wæs micel.
Target and interpretation: Masculine singular **se pliht** takes preterite singular **wæs** and strong masculine predicate **micel**. The danger was great, not a present assertion or comparison. Weak **micla** would miss the selected ordinary predicate form.

R. The fisherman and his companion

R01. Who asks, and who has food?
The companion requests information: **Se gefēra cwið: "Saga mē, hwæt ðū hæbbe."** — The companion says, "Tell me what you have."
The fisherman is reported to have food: **Se fiscere sægð, ðæt hē męte hæbbe.** — The fisherman says that he has food.
Target and interpretation: Identify the two speakers and retain **hē** as the fisherman. The companion's **mē** names the recipient of the requested information, not the possessor of the food. Saying the companion has the food at this point reverses the reported reference.

R02. Three dependent clauses.

- **Hwæt ðū hæbbe** — what you have: a dependent question, with present subjunctive **hæbbe**.
- **Ðæt hē męte hæbbe** — that he has food: reported content, also with present subjunctive **hæbbe**.
- **Ðæt ðū mē hilpst** — that you help me: asserted factual content after knowing, with present indicative **hilpst**.

Target and interpretation: Distinguish question, report and asserted knowledge. The two **hæbbe** forms are subjunctive here, but one has second-singular **ðū**, the other third-singular **hē**. Final **mē** is dative under **helpan**. Neither every **ðæt** clause nor every clause after knowing requires one mechanically prescribed mood.

R03. The companion as actor.
In **Hē hætt his gefēran ðone fisc beran**, finite **hætt** commands accusative singular actor **his gefēran**, the fisherman's companion.
In **Ic gesēo ðē ðone fisc beran**, finite **gesēo** perceives accusative singular actor **ðē**, the companion now addressed directly.
In both, **ðone fisc** is the accusative singular object of **beran**, distinct from its actor.
Target and interpretation: The carrier is the same companion, referred to in third person and then addressed in second person. **Beran** remains nonfinite. **Gefēran** has other possible case/number analyses elsewhere and **ðē** can elsewhere be dative; the command/perception frames settle their accusative actor roles here.
R04. Complete controlled-reading translation.
The fisherman and his companion stand on the shore. The companion says, "Tell me what you have." The fisherman says that he has food. He commands his companion to carry the fish. The companion carries the fish. The fisherman says, "I see you carrying the fish. Now I know that you are helping me."
Target and interpretation: Preserve all speakers and the progression from question to report, instruction, carrying and observation. **Hē/his** continues the fisherman; his companion carries one fish. **Birð** is simple present, without a completed-action claim. "Stand at the shore," "tells his companion to carry" and "I see you carry" are defensible. Natural English need not visibly mark the subjunctive, but it must retain reported "says" versus asserted "know."

S. The Choice of Occupations

Use the eleven local helps supplied with the exact source. These answers interpret the printed passage; they do not turn every displayed source form into an independent production target.
S01. Two comparison domains.
Godes ðēowdōm, service of God, receives first place overall. **Eorðtilð**, agriculture or farming, receives first place among worldly occupations.
Target and interpretation: The third turn narrows the comparison to **woruldcræftas**. The second answer therefore does not withdraw the first. Making agriculture the first answer, or treating God's service as the answer within the later restricted worldly comparison, loses the exchange's structure.

S02. The Gospel quotation.
The quotation begins **Fyrmest sēceað rīce Godes** and ends **tōgēiecte ēow**: “First seek God's kingdom and his righteousness, and all these things will be added to you.”
It commands the hearers to seek the kingdom and righteousness first; it promises the addition of all these things. **Sēceað** is a plural imperative.
Target and interpretation: The command addresses several hearers. **Đās ðing eall** is the subject of indicative **bēoð**; dative **ēow** names recipients. The supplied passive promises a result, not another imperative ordering them to add things. Preserve the actual source **sēceað** beside the selected productive **sēcað**, rather than silently rewriting the quotation.

S03. Two datives, different roles.
In **Ic sęcge ðē**, dative **ðē** is the speech recipient: the Counsellor addresses the Teacher. In **mē is geðūht**, dative **mē** is the experiencer, “to me” in “it seems to me”: the judgment is the Counsellor's.
Target and interpretation: The first dative identifies who hears; the second identifies whose judgment follows. Swapping them gives the Teacher the Counsellor's judgment. The complete seems expression remains supplied; its past participle does not turn the present expression into “I thought.”

S04. Why agriculture?
For-ðām se ierðling ūs ealle fēt — because the farmer feeds us all.
Se ierðling is the nominative singular subject of **fēt**; **ūs ealle** is the accusative plural object, all of us.
Target and interpretation: The farmer supplies food to the speakers and community; **ūs** includes the speaker but gives no exhaustive list of individuals. Plural **ealle** describes those fed, not the singular farmer. Exact **fēt** remains supplied from **fēdan**, not inferred productively by removing the prefix from **āfēdan**.

S05. Complete source translation.
Teacher: “What do you say, wise man? Which occupation seems to you to be foremost among these?”
Counsellor: “I tell you, God's service seems to me to hold first place among these occupations, as it is read in the Gospel: ‘First seek God's kingdom and his righteousness, and all these things will be added to you.’”
Teacher: “And which seems to you to hold first place among worldly occupations?”
Counsellor: “Agriculture, because the farmer feeds us all.”
Target and interpretation: Retain all four turns, the complete quotation and the narrowed third-turn comparison. “Craft/trade,” “chief place/primacy,” “farming/tillage” and “plowman” are defensible equivalents. “It seems to me that God's service holds first place” is also natural English. God is the object of the service; the service, not God, receives first place. Translate **is geðūht** as a present judgment. Cook identifies **furðra** as nominative singular; the first question's **hwilc** is also nominative. Do not force the whole source frame into the command/perception construction with an accusative actor.
Cook's note 12 marks three **is** insertions as conjectural, absent from his manuscripts: those in the two Teacher questions and the **swā-swā** clause. The distinct **mē is geðūht** is not a fourth application of that note. This translation follows his printed text while retaining that qualification. Note 20 records manuscript **cræftas woruld** beside printed **woruldcræftas**. The printed compound, participle **tōgēiecte** and command **sēceað** remain as given, with local helps. [4]

X. Connected application and repair

X01. A connected account.
Se fiscere hēt ðā męnn ðone fisc beran. Ic geseah hīe hine beran. Ic wāt, ðæt hīe him hulpon.
The fisherman commanded the men to carry the fish. I saw them carry it. I know that they helped him.
Target and interpretation: Ðā męnn/hīe are the commanded and observed plural actors; **ðone fisc/hine** is the singular fish. Masculine **hine** follows **fisc** although English says “it.” In the final clause **hīe** is nominative subject of preterite indicative **hulpon**, and **him** the dative person helped, naturally the fisherman. Keep present **wāt** with factual past help; subjunctive **hulpen** misses the target. Plain **beran** gains neither plural nor past endings.

X02. Repairing deliberate errors.
(a) Ic gesēo hine ðone fisc beran. — I see him carrying the fish. Replace nominative **hē** with accusative actor **hine**.
(b) God geworhte ðone mann gōdne. — God made the man good. Replace **gōd** with strong masculine accusative singular **gōdne**, agreeing with the object.
Target and interpretation: Preserve the selected complements while repairing case. Being the carrier does not make the expressed actor nominative after **gesēo**. The predicate adjective describes the object, so its ending follows that accusative object, not nominative subject **God**. The erroneous inputs were deliberately composed for diagnosis, not source readings to preserve.

Source and editorial notes

[1] Cook, *A First Book in Old English*, second edition (1895), §§169, 173 and 194–199, supplies the central complement constructions; Fulk, *An Introductory Grammar of Old English* (2020), §§44–45 and 58, supports the stated mood and infinitive distinctions. Dependent-question frames were also checked against Bosworth–Toller, Main volume p. 855b, **secgan**, and Supplement p. 575a–b, **hwā**. These bounded assignments remain separate from later tense-sequence, general impersonal and additional passive systems.

[2] The selected new noun paradigms follow Cook, *First Book*, printed pp. 28–29, 31 and 33–34; the verbal systems follow the audited paradigms and lexical entries. Bosworth–Toller, Main volume p. 137, corroborates the selected **bycgan** forms. Documented alternatives remain valid; a requested selected table is a narrower exercise target.

[3] Cook, *Exercises in Old English* (1895), Group II, Exercises 9–12, printed pp. 4–6 / PDF pp. 12–14: all 64 prompts. Parentheses, brackets and the final comma in II.9.11 belong to those prompts. The Old English model answers are new teaching material. Absolute **slēan** is supported by Bosworth–Toller, Main volume p. 883a, B.I; Cook, *First Book*, p. 132 also supports a hammer-striking use of **bēatan**. The numeral help in II.12.13 is an explicit adaptation of Cook §§78–79, not a claimed literal source sentence.

[4] The exact four-turn source is Cook, *First Book*, printed p. 131 / PDF p. 147, prose lines counted editorially as 7–15, with printed 10 and 15 as anchors. The complete translation includes its Gospel quotation, but not the preceding merchandise exchange or following smith speech. All thirteen original notes remain in the learner chapter. Notes 12, 14 and 20 govern the conjectural copulas, nominative **furðra** and manuscript word order discussed in S05. Unfamiliar source constructions retain the eleven local helps. PDF pages here are one-based.

UNIT 10

Answer key

The models preserve the meaning and controls of each actual task. Documented forms and grammatical word orders can differ from a model. Where English leaves a person's gender or an addressee's number open, accept a consistent defensible choice. Distinguish valid Old English from compliance with an expressly requested construction: a sentence with **mid** may be grammatical while failing a request for bare instrumental means.

Cook's English prompts below retain their original wording and identifiers. The Old English models and explanations are new teaching material. The fourteen teaching examples are not separate graded tasks; this key covers the 89 assigned exercises. [1]

For future reference, a present indicative is often sufficient in context. **Willan** contributes the taught desire, willingness or refusal; it is not a mechanical replacement for English *will*. Specific defensible volitional alternatives are noted below. Ordinary predicates agree with their own subjects; object descriptions agree with their objects; an internal genitive does not change the external case of its head phrase.

The give-to-drink and **swā lange swā** expressions, and the Judgment reading's local helps, remain available when answering. They are not tests of unaided recall of a larger infinitive or subordinate-clause system. In complete form tasks, every labeled cell is required even where several cells have the same spelling.

F. Complete forms

F01. Complete fæder.

Case	Singular	Plural
Nominative	fæder	fæderas
Genitive	fæder	fædera
Dative	fæder	fæderum
Accusative	fæder	fæderas

Target and interpretation: All four selected singular cells are endingless **fæder**. Plural nominative/accusative **fæderas**, genitive **fædera** and dative **fæderum** keep the stated masculine pattern. Documented genitive singular **fæderes** and dative **fædere** are valid variants, but should be distinguished from the selected endingless cells requested here. Do not impose the umlaut pattern of another kinship noun or invent a changed singular vowel. [2]

F02. Complete gāt.

Case	Singular	Plural
Nominative	gāt	gǣt
Genitive	gāte	gāta
Dative	gǣt	gātum
Accusative	gāt	gǣt

Target and interpretation: In this selected table **gǣt** represents dative singular and nominative/accusative plural. Genitive singular is selected **gāte**. The documented alternative genitive **gǣt** and dative **gāte** are valid language; the phrase *in the selected paradigm* prevents that genitive variant from becoming a fourth required answer. Keep **gāta/gātum** without umlaut, and do not invent a nominative plural in **-as**. [2]

F03. Forwiernan: complete indicative.

Person and number	Present	Preterite
1 sg.	forwierne	forwiernde
2 sg.	forwiernst	forwierndest
3 sg.	forwiernð	forwiernde
1–3 pl.	forwiernað	forwierndon

Target and interpretation: Give all twelve labeled cells, including the three identical forms in each plural. The present uses **forwiern-**; the preterite uses dental **forwiernd-**, with second-singular **-est** and plural **-on**. For example, **forwiernst** means you deny, whereas **forwierndest** means you denied. Do not remove the past dental from a preterite or replace it with a strong-verb vowel change. Other evidenced spellings may be grammatical, but the requested table is this selected **forwiernan** system.

F04. Unnan: supported indicative and subjunctive.

Indicative

Person and number	Present	Preterite
1 sg.	ann	ūðe
2 sg.	—	ūðest
3 sg.	ann	ūðe
1–3 pl.	unnon	ūðon

Subjunctive

Person and number	Present	Preterite
1 sg.	unne	ūðe
2 sg.	unne	ūðe
3 sg.	unne	ūðe
1–3 pl.	unnen	ūðen

Target and interpretation: Present **ann/unnon** has present granting meaning; past indicative **ūðe/ūðest/ūðon** keeps its distinct endings. In the subjunctive all singular persons share **unne** or **ūðe**, and all plural persons **unnen** or **ūðen**. Present **unne** and **unnen** serve grants, wishes or addressed commands; an instruction to one addressee selects second-singular **unne**.

The dash marks a present indicative second-singular cell not established by the checked sources. It is not a lexical form and does not prove that no historical variant could ever exist. Do not fill it by analogy or manufacture plural **unnað**. Cook §129 labels **unne** imperative; Fulk §123 describes

subjunctive substitution where a formal imperative is absent. The course uses the supported subjunctive analysis while preserving Cook's terminology. Past subjunctive second-singular **ūðe**, unlike indicative **ūðest**, has no **-st**. [3]

F05. Diagnostic fēdan forms.

Requested cell	Selected form
Present indicative second singular	fētst
Present indicative third singular	fēt
Present indicative third plural	fēdað
Preterite indicative first singular	fēdde
Preterite indicative third plural	fēddon
Command to one addressee	fēd
Command to more than one	fēdað

Target and interpretation: The present second/third singular has the checked dental contraction; it is not obtained by blindly retaining **d** before an ending. The past uses **fēdd-**. The plural command and plural present indicative share **fēdað**, but their functions differ. The attested third-singular variants **fētt/fēdeð** are defensible language, while **fēt** is the selected target. Do not substitute prefixed **āfēdan** or treat singular command **fēd** as an indicative form.

F06. Distinct instrumentals and dative-shaped forms.

Gender and number	Instrumental se	Strong instrumental gōd	Corresponding dative se	Strong dative gōd
Masculine singular	ðȳ; also ðon	gōde	ðǣm	gōdum
Neuter singular	ðȳ; also ðon	gōde	ðǣm	gōdum

Target and interpretation: Feminine singular and plural express the instrumental relation with dative-shaped forms: feminine singular **ðære/gōdre**, plural **ðæm/gōdum** in all genders. Nouns likewise have no separate new ending here; the food noun **męte** shares the shape used for dative and instrumental. The construction establishes the means relation. Distinct **gōde** must not be relabeled dative **gōdum** merely because the noun's ending is shared. Bare means is deliberately practiced in this unit; **mid + dative** is the ordinary prose alternative and is grammatical where a task does not expressly demand the bare form. [4]

A. Case and construction analysis

A01. Dependent and governed genitives.
(a) Ðæs cuman sunu cōm.
(b) Ic geswāc ðæs weorces.
The stranger's son came. I ceased from the work. In the first, ðæs cuman is a genitive dependent of sunu; in the second, ðæs weorces is directly governed by geswāc.
Target and interpretation: Relational genitive versus a lexically governed genitive. Stopped/ceased working conveys the second meaning, provided the analysis still identifies the genitive government. A genitive is not necessarily a possessor, and its case does not depend on whether English uses of.

A02. A recipient with a possessor.
Se munuc sealde ðæs cuman suna męte.
The monk gave food to the stranger's son. Suna is dative singular, the recipient; męte is accusative singular, the thing given; ðæs cuman is genitive singular, the stranger whose son is meant.
Target and interpretation: External dative head with an internal genitive dependent. Gave the stranger's son food is equivalent. Do not make cuman the direct recipient or let its genitive replace the head noun's dative.

A03. One monk and one of the monks.
(a) Ān munuc cōm.
(b) Ān ðāra munuca cōm.
One monk came. One of the monks came. In the first ān agrees with nominative singular munuc; in the second ān stands as the nominative head and ðāra munuca is the genitive plural whole.
Target and interpretation: Agreeing attributive numeral versus substantival numeral with genitive whole. A single monk came can express the first; the second must retain membership in the specified group. The genitive plural does not make the head or finite verb plural.

A04. An agreeing numeral and a quantity word.
(a) Ic hæbbe twā scēap.
(b) Ic hæbbe fela scēapa.
I have two sheep. I have many sheep. Twā agrees with the neuter accusative plural scēap; invariant fela takes the genitive plural scēapa.
Target and interpretation: Attributive cardinal count versus invariant fela with a genitive plural. A great many sheep is defensible for fela if the grammatical contrast is preserved. Do not carry the agreeing cardinal's accusative construction over to fela, and do not use masculine twēgen with sheep.

A05. Giving and denying.
(a) Hē sealde ðǣm cuman męte.
(b) Hē forwiernde ðǣm cuman mętes.
He gave food to the stranger. He denied the stranger food. The person is dative in both. Sęllan takes an accusative thing given; forwiernan takes a genitive thing denied.
Target and interpretation: Dative recipient/person with accusative giving versus genitive denial. Withheld food from the stranger preserves the second meaning. The English word food looks identical but the two Old English verbs govern it differently.

A06. Useful to whom?
Sēo gāt is ðǣm scēaphierde behēfu.
The goat is useful to the shepherd. Gāt is feminine nominative singular, the subject; scēaphierde is masculine dative singular, the person to whom it is useful; strong behēfu is feminine nominative singular agreeing with gāt.
Target and interpretation: Dative governed by useful, subject-predicate agreement, lexical new noun. Of use to the shepherd is equivalent. Behēfu agrees with the goat, not with the dative person; masculine behēfe would fail the selected agreement target.

A07. The seeming experiencer and subject.
Mē ðyncð ðis gōd.
This seems good to me. Mē is the dative experiencer. Ðis is the neuter nominative singular subject and gōd the agreeing predicate; ðyncð is third singular.
Target and interpretation: Bounded seeming frame with a dative experiencer and neuter nominative subject. This appears good to me is equivalent. The dative experiencer is not a nominative subject. This particular seeming pattern has an expressed neuter subject; it must not be described as syntactically subjectless.

A08. Two expressions of hunger.
(a) Hine hyngrede.
(b) Hē wæs hungrig.
Both mean He was hungry. Hine is accusative singular in the impersonal hunger construction, which uses third-singular hyngrede without a nominative person subject. Hē is nominative singular and controls wæs in the ordinary adjective predicate; hungrig agrees with hē.
Target and interpretation: Accusative experiencer in an impersonal hunger clause versus nominative personal adjective predicate. He felt hungry is acceptable for the first. Do not change hyngrede to agree with an accusative experiencer as though that pronoun were the nominative subject.

A09. Accompaniment and means.
(a) Se munuc cōm mid ðǣm cuman.
(b) Se munuc fēdde ðone cuman mid gōdum męte.
The monk came with the stranger. The monk fed the stranger with good food. Mid expresses accompaniment in the first and means in the second; it governs dative in both.
Target and interpretation: Accompaniment and means expressed by the same preposition with dative. By means of good food makes the second relation explicit. Identical English with and identical prepositional case do not make the two relations identical.

A10. Distinct instrumental forms.
(a) Se munuc fēdde ðone cuman gōde męte.
(b) Se munuc fēdde ðone cuman ðȳ męte.
The monk fed the stranger with good food. The monk fed the stranger with that food. Gōde is the distinct masculine singular strong instrumental; ðȳ is the distinct instrumental determiner. The noun męte has the same surface used for dative/instrumental, so its ending alone does not distinguish them.
Target and interpretation: Bare instrumental means, distinct adjective/determiner forms and noun syncretism. That food is the required demonstrative meaning in the second; an article-like translation the food is contextually possible, but the teaching example selects that. Do not call gōde a weak nominative merely because another paradigm cell has the same spelling.

A11. The perceived condition of an object.
Ic geseah ðone cuman untrumne.
I saw the stranger sick. Both ðone cuman and untrumne are masculine accusative singular. The adjective describes the perceived object and agrees with it.
Target and interpretation: Perception with a directly agreeing description of the object. I saw that the stranger was sick conveys the meaning in English, provided the Old English analysis does not invent an expressed finite ðæt clause. Untrumne does not describe the nominative speaker.

A12. Naming people and describing a noun.
(a) Se munuc scrȳt ðā nacodan.
(b) Se munuc scrȳt ðone nacodan cuman.
The monk clothes the naked (people). The monk clothes the naked stranger. Nacodan is weak masculine accusative plural used substantivally in the first, but weak masculine accusative singular modifying cuman in the second. The articles and expressed noun/context distinguish reference although nacodan is syncretic.
Target and interpretation: Substantival personal adjective versus an adjective modifying an expressed singular noun. Covers/provides clothing for is defensible when the intended clothing sense is retained. The ending -an alone does not establish number; do not supply a singular person in the first or a plural stranger in the second.

T. Controlled composition

T01. Denying food.
The monks deny the stranger food. Use forwiernan.
Đā munucas forwiernað ðǣm cuman mętes.
Target and interpretation: Munucas is nominative plural and controls **forwiernað**. The stranger is dative singular **ðǣm cuman**, while the food is genitive **mętes**. The monks deny food to one stranger; they do not deny the stranger's existence or deny the food to themselves. Grammatical word-order variants are acceptable, but accusative food would miss the requested denial frame.

T02. Granting food.
I grant the stranger food. Use unnan.
Ic ann ðǣm cuman mętes.
Target and interpretation: First-singular indicative **ann** agrees with **ic** and means grant. **Ðǣm cuman** is the dative recipient, **mętes** the genitive thing granted. **Unne** would instead introduce the subjunctive form used for a wish or command. A giving sentence with **sęllan** can be grammatical but does not demonstrate the expressly requested **unnan** construction.

T03. Members of a group.
Some of the monks came with the stranger. Which of the monks came? Use sum and hwilc with a genitive whole.
Sume ðāra munuca cōmon mid ðǣm cuman.
Hwilc ðāra munuca cōm?
Target and interpretation: Sume is a nominative plural head selecting genitive **ðāra munuca**, and therefore takes plural **cōmon**. **Mid ðǣm cuman** gives the accompanying stranger in the dative. In the displayed question, singular **hwilc** selects the same genitive whole and takes **cōm**. English *which of the monks* does not specify how many were selected: **Hwilce ðāra munuca cōmon?** is also valid. The head, not the genitive group's plurality, controls the finite verb.

T04. Many sheep.
The shepherd has many sheep. Use fela.
Se scēaphierde hæfð fela scēapa.
Target and interpretation: The shepherd is singular subject of **hæfð**. Invariant **fela** requires genitive plural **scēapa**, meaning many sheep. An agreeing expression with **manig** may be valid Old English, but it misses the explicit **fela** target. Unchanged accusative plural **scēap** would copy the ordinary direct-object construction instead of the assigned quantity frame.

T05. Bare means.
The monks feed the strangers with good food. Express the means without a preposition.
Ðā munucas fēdað ðā cuman gōde męte.
Target and interpretation: Plural **fēdað** agrees with the monks. **Ðā cuman** is the accusative plural of the people fed, although weak **cuman** also occurs in singular oblique cells. **Gōde męte** is the requested bare means phrase: the adjective has distinct masculine singular instrumental **-e**, and the noun has the dative-shaped form. Ordinary prose **mid gōdum męte** is grammatical but misses *without a preposition*. The plural participants do not make the food plural.

T06. That food and the sick.
With that food I fed the sick. Use the distinct instrumental of se and an adjective naming the sick people.
Ðȳ męte fēdde ic ðā untruman.
Target and interpretation: Ðȳ męte expresses the means with a distinct masculine singular instrumental determiner. **Ðā untruman** names sick people and is weak accusative plural, the people fed. **Fēdde** is first-singular preterite, agreeing with **ic** despite the initial means phrase. Instrumental **ðon** is an admitted variant, and other grammatical ordering is valid. A **mid** phrase would express means but would not demonstrate the requested distinct instrumental of **se**.

T07. Plural hunger experiencers.
They were hungry. Use the impersonal verb hyngran.
Hīe hyngrede.
Target and interpretation: Hīe is accusative plural, the experiencers of hunger. In this subjectless construction **hyngrede** remains third-singular preterite; it does not agree with the experiencers' plural number. An ordinary copular sentence with a correctly agreeing form of **hungrig** can be grammatical, but it misses the explicit impersonal-verb target. Do not reinterpret **hīe** as a nominative subject solely from its syncretic spelling.

T08. Past seeming.
That seemed good to us. Use the chapter's ðyncan construction.
Ūs ðūhte ðæt gōd.
Target and interpretation: Dative plural **ūs** identifies those to whom it seemed good. **Ðæt** is neuter nominative singular, the stimulus and subject, with agreeing predicate **gōd**; **ðūhte** is singular preterite. Grammatical rearrangement is acceptable. This **ðæt** is not a content conjunction, and the plural experiencers do not require a plural finite verb.

Cook, Group III, Exercise 13

III.13.1 (EX-III-13-01).
Christ is the Son of God [God's Son].
Crīst is Godes sunu.
Target and interpretation: Christ is identified as God's son. **Crīst** and predicate **sunu** are nominative singular; **Godes** is the dependent genitive. The bracketed English asks for this genitive construction, with the dependent before the head and no separate article before **sunu**. Making **sunu** accusative would treat an identifying predicate as a direct object.

III.13.2 (EX-III-13-02).
Christ is our Lord.
Crīst is ūre dryhten.
Target and interpretation: Ūre is the agreeing possessive, masculine nominative singular with predicate **dryhten**; it identifies the Lord as ours. Its ending follows the singular thing possessed, not the plural possessors. Do not substitute a personal-pronoun genitive merely because English uses *our*: the assigned attributive possessive has its own agreement.

III.13.3 (EX-III-13-03).
When saw I you (sing.) hungry?
Hwonne geseah ic ðē hungrigne?
Target and interpretation: Hwonne asks when; **geseah** is first-singular preterite, with **ic** as the perceiver. **Ðē** is the accusative person seen, and strong **hungrigne** is an accusative masculine singular description of that person. The model assumes a male addressee. **Hungrige**, accusative feminine singular, is valid for a female addressee: the English fixes number but not gender. A nominative adjective would wrongly describe the speaker or fail to agree with the object.

III.13.4 (EX-III-13-04).
Gold is precious.
Gold is dēorwierðe.
Target and interpretation: Mass **gold** is neuter nominative singular, and **dēorwierðe** is its strong nominative neuter singular predicate: gold is valuable. The final **-e** belongs to this adjective's lexical pattern; it does not make the form weak. Do not remove it to imitate the endingless neuter of **gōd**.

III.13.5 (EX-III-13-05).
The Day of Judgment will come.
Dōmes dæg cymð.
Target and interpretation: The day, **dæg**, is the nominative subject; **dōmes** is its genitive dependent, identifying the judgment day. Present third-singular **cymð** receives future reference from the sentence's context. A future event does not require **willan**, whose taught meaning adds desire or willingness. The genitive phrase does not make the subject plural or turn **dæg** into genitive.

III.13.6 (EX-III-13-06).
The farmer says to the workman, I will sell this house.
Se ierðling sægð ðǣm wyrhtan: “ic cīepe ðis hūs.”
Target and interpretation: The farmer speaks to dative **ðǣm wyrhtan**. Inside the quotation, **ic** is the farmer and **cīepe** is first singular; **ðis hūs** is the neuter accusative thing to be sold. The present can state the intended later sale. If *will* expresses willingness, **ic wille ðis hūs cīepan** is also defensible, using the separately taught plain infinitive. Do not retain third-person agreement inside the farmer's first-person speech or put the speaking recipient in the accusative.

III.13.7 (EX-III-13-07).
The workman answers the farmer, I will buy your house.
Se wyrhta andswarað ðǣm ierðlinge: “ic bycge ðīn hūs.”
Target and interpretation: Andswarian takes the answered person in the dative: **ðǣm ierðlinge**. The workman is **ic** in the quotation; the farmer is the singular possessor named by **ðīn**, which agrees with accusative neuter singular **hūs**. The model's present expresses the prospective purchase. **Ic wille ðīn hūs bycgan** is valid when willingness or intention is meant. Confusing these speech roles would make the workman buy his own house.

III.13.8 (EX-III-13-08).
Life is more than raiment.
Līf is māre ðonne rēaf.
Target and interpretation: Life is greater in worth than clothing. **Māre** is the weak comparative, neuter nominative singular with **līf**; comparatives remain weak without an article. **Rēaf** is the parallel nominative term after **ðonne**, with the copula understood. Here *more* evaluates worth, not the number of lives or garments. Do not replace **māre** by a plural quantity expression.

III.13.9 (EX-III-13-09).
The stranger is in prison.
Se cuma is on cwearterne.
Target and interpretation: The stranger is located in prison: **se cuma** is nominative singular, and locative **on** takes dative **cwearterne**. The English institutional expression has no article, and the model needs none before the prison. **Cweartern** without its dative ending would fail this selected location construction; **cuman** would be an oblique form of the stranger rather than the subject.

III.13.10 (EX-III-13-10).
The merchant is in the inn.
Se mangere is on ðǣm giesthūse.
Target and interpretation: The merchant is the subject; the inn is a location, **on ðǣm giesthūse**, with neuter dative singular agreement. **Giesthūse** retains the compound's noun stem and adds the dative ending. Nominative/accusative **giesthūs** is not the required cell after locative **on**.

III.13.11 (EX-III-13-11).
The father clothes the son.
Se fæder scrȳt ðone sunu.
Target and interpretation: Nominative **fæder** clothes accusative **ðone sunu**. **Scrȳt** is the selected third-singular present of **scrȳdan**, not an instruction to clothe. Accusative singular **sunu** retains lexical **-u**; dative **suna** would not express the person clothed in this frame. The identical surface **fæder** in several cases does not determine its role without the clause.

III.13.12 (EX-III-13-12).
This world is great.
Ðēos woruld is miclu.
Target and interpretation: Woruld is feminine nominative singular, so *this* is **ðēos** and the strong predicate *great* is selected **miclu**. Both agree with the world, not with an assumed neuter English *it*. **Ðis** or masculine **micel** would miss that grammatical gender; no weak predicate is required merely because the subject has a demonstrative.

III.13.13 (EX-III-13-13).
The shepherd feeds the sheep (sing.).
Se scēaphierde fēt ðæt scēap.
Target and interpretation: The shepherd feeds one sheep. **Fēt** is third-singular present, and **ðæt scēap** is neuter accusative singular, the being fed. The noun's unchanged spelling can also occur in plural cells, but the English explicitly requires singular here. **Ðā scēap** would make the sheep plural and miss that control.

III.13.14 (EX-III-13-14).
The merchants are rich.
Đā mangeras sindon welige.
Target and interpretation: Mangeras is nominative masculine plural; plural **sindon** and strong predicate **welige** agree with the merchants. The article belongs to the subject phrase and does not make the separate predicate adjective weak. Singular **is** loses the number; weak **weligan** does not meet the ordinary positive-predicate construction.

III.13.15 (EX-III-13-15).
The soldier drinks wine.
Se cęmpa drincð wīn.
Target and interpretation: Nominative **se cęmpa** is the drinker, and singular mass **wīn** is accusative, the drink. **Drincð** is present third singular. The soldier's weak-noun nominative **-a** is not a feminine or plural marker, and a plural verb would not agree with this subject.

III.13.16 (EX-III-13-16).
The monks drank water.
Đā munucas druncon wæter.
Target and interpretation: The monks drank water in the past. **Munucas** is nominative plural; **druncon** uses the plural preterite stem and ending. **Wæter** is the singular mass object. Singular **dranc** would fail the subject's number, while present **drincað** would lose the past time.

Cook, Group III, Exercise 14

III.14.1 (EX-III-14-01).
The king sat on the throne.
Se cyning sæt on ðǣm setle.
Target and interpretation: Sæt is the third-singular preterite of **sittan**. The throne is a location expressed by neuter dative **ðǣm setle** after **on**. The king is sitting, not being seated by an unnamed agent. Accusative **setl** would miss this ordinary locative frame.

III.14.2 (EX-III-14-02).
Stand on my right hand.
Stand on mīne swīðran hand.
Target and interpretation: The command places its addressee at the speaker's right side. The bounded expression **on mīne swīðran hand** has feminine accusative singular **hand**, with agreeing **mīne** and weak **swīðran**. The checked source uses the same accusative side-expression with static **standað**; rest alone does not require a dative. The ending **-an** on **swīðran** by itself cannot decide the case. The English leaves the addressee's number open, so plural **Standað** is also valid. [4]

III.14.3 (EX-III-14-03).
All nations shall come to the judgment.
Ealla ðēoda cumað tō ðǣm dōme.
Target and interpretation: All nations are the feminine nominative plural subject, **ealla ðēoda**, with plural **cumað**. Destination **tō** governs dative **ðǣm dōme**. The context makes the present future in reference. **Ealla** is the selected feminine plural; the source also attests feminine **ealle**, so that variant need not be mistaken for masculine agreement. A singular verb or an accusative destination misses the selected frame.

III.14.4 (EX-III-14-04).
The devil is (om. the) father of the unrighteous.
Se dēofol is ðāra unrihtwīsra fæder.
Target and interpretation: The devil is identified as father of the unrighteous people. Substantival **ðāra unrihtwīsra** is genitive plural dependent on nominative singular **fæder**; its article belongs to the dependent people, not to the father. Follow the explicit omission of English *the* before *father*. An accusative plural would treat the unrighteous as an object, while an extra article on the head would miss the assigned dependent-first genitive pattern.

III.14.5 (EX-III-14-05).
All men are sinful.
Ealle męnn sindon synfulle.
Target and interpretation: Ealle męnn is the nominative masculine plural subject; **sindon** and strong predicate **synfulle** agree with it. The sentence describes all men as sinful; it does not use an adjective by itself to name *the sinful*. Keep the umlauted noun plural **męnn**, and do not substitute the weak substantive form for this ordinary predicate.

III.14.6 (EX-III-14-06).
The priest is sick.
Se mæsseprēost is untrum.
Target and interpretation: The priest is the nominative subject, and **untrum** is his strong masculine nominative singular predicate. **Is** states present illness. This is an ordinary copular sentence: English illness does not by itself require an impersonal verb or an accusative experiencer. A visitation verb would introduce an action absent from the prompt.

III.14.7 (EX-III-14-07).
Grant (sing.) me garments.
Unne mē wǣda.
Target and interpretation: The command addresses one person. **Unne** is the selected present subjunctive second singular used as an addressed command; **mē** is dative recipient and **wǣda** genitive plural thing granted. Cook calls **unne** imperative; the selected analysis follows the separately evidenced subjunctive substitution. These descriptions preserve the same supported form. Do not invent a regular imperative or copy the accusative-thing government of ordinary **sęllan**. [3]

III.14.8 (EX-III-14-08).
The horse is useful to the king.
Đæt hors is ðǣm cyninge behēfe.
Target and interpretation: The horse is useful; the king is the person to whom it is useful. Thus **ðæt hors** is neuter nominative singular and **ðǣm cyninge** masculine dative singular. **Behēfe** is a neuter nominative predicate agreeing with the horse, even though a masculine cell has the same spelling. The dative king is neither the subject nor an accusative object.

III.14.9 (EX-III-14-09).
The loss of all your things was strange.
Ealra ðīnra ðinga lyre wæs sellic.
Target and interpretation: The singular loss, **lyre**, is the subject of **wæs** and is described by strong masculine singular **sellic**. Within its genitive dependent, **ealra** and **ðīnra** agree with neuter plural **ðinga**: all the things belonged to the addressee. They do not agree with singular **lyre**. English *your* leaves the possessor's number open; **ēowerra** for plural possessors, or **incerra** for two, is defensible in place of **ðīnra**. Plural things do not make the loss or its verb plural.

III.14.10 (EX-III-14-10).
He departed from her.
Hē gewāt fram hiere.
Target and interpretation: Gewāt is the singular preterite meaning departed. **Fram** governs dative **hiere**, the person from whom he departed. This **hiere** is not a possessor attached to an omitted noun. Do not analyze the prefix **ge-** as a separate perfect auxiliary or change the pronoun to an accusative merely because English says *her*.

III.14.11 (EX-III-14-11).
Give (sing.) me to drink.
Sęle mē drincan.
Target and interpretation: Singular **sęle** gives something to the dative speaker **mē**; plain **drincan** supplies the action provided. The locally supplied idiom is *give someone to drink*, with no **tō**. The infinitive remains uninflected. **Tō drincanne** can serve a purpose construction elsewhere, but substituting it here would miss the supplied idiom; unaided recall of that idiom is not being tested. [4]

III.14.12 (EX-III-14-12).
Visit (plur.) the sick.
Genēosiað ðā untruman.
Target and interpretation: Genēosiað is the required plural command, addressing more than one person. **Ðā untruman** names the sick people and is weak accusative plural, the persons visited. The checked **genēosian** frame governs an accusative person; a dative cannot be inferred from an English paraphrase such as *attend to*. A singular command misses the explicit plural control, independently of the number of sick people.

III.14.13 (EX-III-14-13).
When did you (sing.) see the goat?
Hwonne gesāwe ðū ðā gāt?
Target and interpretation: Gesāwe is the second-singular preterite agreeing with **ðū**. Feminine accusative singular **ðā gāt** is the goat seen. In this object position **gǣt** would be plural, although that spelling has other roles in the full paradigm. Do not use first/third-singular **geseah** for the explicitly singular second-person subject or add English auxiliary *did*.

III.14.14 (EX-III-14-14).
When was he in the inn?
Hwonne wæs hē on ðǣm giesthūse?
Target and interpretation: Hwonne asks for the time of his past presence; **wæs** agrees with singular **hē**. The inn remains dative **ðǣm giesthūse** after locative **on**. The question word neither governs the inn nor changes a location into an accusative phrase. Present **is** would change the time asked about.

III.14.15 (EX-III-14-15).
This is eternal life.
Ðis is ēce līf.
Target and interpretation: Neuter nominative **ðis** is identified with **ēce līf**. **Ēce** agrees with nominative neuter singular **līf** and retains its lexical **-e** in the strong form. Do not infer weak inflection from that final vowel or translate the demonstrative as a clause-introducing *that*.

III.14.16 (EX-III-14-16).
The prisons were empty.
Ðā cweartern wǣron ǣmtig.
Target and interpretation: Endingless **cweartern** is nominative neuter plural here, established by **ðā**, plural **wǣron**, and the English. Selected strong neuter nominative plural **ǣmtig** is also endingless. Neither noun nor adjective must acquire **-as** or **-e** simply to look plural. Singular **wæs** would lose the stated number.

III.14.17 (EX-III-14-17).
The living God is eternal.
Se cwica God is ēce.
Target and interpretation: Cwica is weak masculine nominative singular inside the definite phrase **se cwica God**. **Ēce** is a separate strong predicate describing God as eternal. The two adjectives have different functions: the subject's article controls the ordinary attributive adjective, not the independent predicate. Using strong **cwic** inside this selected definite phrase would miss the requested agreement pattern.

Cook, Group III, Exercise 15

III.15.1 (EX-III-15-01).
He stood before the king.
Hē stōd beforan ðǣm cyninge.
Target and interpretation: Stōd is singular preterite: he stood in front of the king. The selected locative preposition **beforan** takes masculine dative **ðǣm cyninge**. The spelling is the joined course form. An accusative king would miss this specific frame; the case is learned with the preposition, not inferred from the modern word *before* alone.

III.15.2 (EX-III-15-02).
The goat eats grass.
Sēo gāt itt gærs.
Target and interpretation: Sēo gāt is feminine nominative singular, and **itt** is the selected third-singular present of **etan**. Mass **gærs** is the accusative thing eaten. Do not confuse present **itt** with preterite **æt**, or treat the feminine goat as masculine because English ordinarily uses *it* for an animal.

III.15.3 (EX-III-15-03).
The angel flies to the earth.
Se ęngel flīehð tō ðære eorðan.
Target and interpretation: The angel is the singular subject of selected **flīehð**; **tō** gives the destination with dative **ðære eorðan**. **Ęngel** means angel, distinct from the earlier fish-hook word **angel**. Preserve the checked present stem and the destination's dative; replacing the latter with an accusative imports an untaught government rule.

III.15.4 (EX-III-15-04).
You (sing.) deny me food.
Đū forwiernst mē mętes.
Target and interpretation: Forwiernst agrees with singular **đū**. **Mē** is the dative person denied, and **mętes** the genitive thing denied. English puts both after *deny*, but their Old English cases differ. Accusative **męte**, as in ordinary giving, would miss **forwiernan**'s selected government.

III.15.5 (EX-III-15-05).
The monk did it in Christ's name.
Se munuc dyde hit on Crīstes naman.
Target and interpretation: The monk performed the deed, represented by accusative **hit**. In the bounded name-expression, **naman** is dative after **on**, while **Crīstes** is its dependent genitive: the deed was done in Christ's name. The whole phrase's external case and its possessor's internal case remain distinct. Do not make both nouns genitive or replace **naman** by nominative **nama**.

III.15.6 (EX-III-15-06).
He will separate the goats from the sheep.
Hē tōtwǣmð đā gæt fram đǣm scēapum.
Target and interpretation: Singular **hē** will separate accusative plural **đā gæt** from dative plural **đǣm scēapum**. **Tōtwǣmð** is present third singular with contextual future reference. The unit explicitly assigns this separation frame for animals. **Gāt** would make the direct object singular; **scēap** after **fram** would omit the required dative plural ending.

III.15.7 (EX-III-15-07).
He poured her out wine and water.
Hē scęncte hiere wīn and wæter.
Target and interpretation: He poured or served wine and water for her. **Scęncte** is singular preterite; **hiere** is the dative recipient. **Wīn** and **wæter** are coordinated accusative mass objects, not the subjects of a plural verb. The pronoun is governed by the serving frame, not a possessive modifying the drinks.

III.15.8 (EX-III-15-08).
The Lord will come with his angels.
Se dryhten cymð mid his ęnglum.
Target and interpretation: The Lord is the singular subject of future-reference **cymð**. Accompanying angels are dative plural **ęnglum** after **mid**, using the syncopated stem. **His** is the invariant third-person possessor and refers to the singular Lord; it is not made plural to match the angels. Nominative **ęnglas** after **mid** would lose the accompaniment construction.

III.15.9 (EX-III-15-09).
The morning cometh, and also the night.
Se morgen cymð and ēac sēo niht.
Target and interpretation: Morning comes, and night also comes. **Morgen** is masculine and **niht** feminine, hence **se** and **sēo**. The second coordinated clause leaves its singular coming predicate understood; repeating **cymð** there is also valid. Do not force a plural verb into the first clause merely because the sentence mentions two arrivals, or treat archaic English *cometh* as a command.

III.15.10 (EX-III-15-10).
Work the works of God.
Wyrceað Godes weorc.
Target and interpretation: Godes is genitive singular dependent on accusative plural **weorc**, the works to be performed. The unchanged neuter noun shape can be plural. The model uses plural command **wyrceað**; singular **Wyrc Godes weorc** is equally defensible because the English does not specify the addressee's number. The genitive identifies whose works they are; it does not make God the grammatical subject of the command.

III.15.11 (EX-III-15-11).
Clothe (sing.) the naked.
Scrȳd ðā nacodan.
Target and interpretation: Singular **scrȳd** addresses one person. Weak accusative plural **ðā nacodan** names the naked people to be clothed. The command's addressee and its object have separate numbers: plural people do not call for a plural imperative. A singular object article would change the model's collective reference.

III.15.12 (EX-III-15-12).
I will not sit on the king's throne.
Ic ne sitte on ðæs cyninges setle.
Target and interpretation: First-singular **sitte** has future reference under negation. The throne is dative **setle** after locative **on**; **ðæs cyninges** is the internal genitive identifying its possessor. If a refusal or unwillingness is intended, **Ic ne wille on ðæs cyninges setle sittan** is also valid, using the taught plain infinitive. The present model is not mandatory for every reading of English *will not*. Do not change the head noun to genitive because its possessor is genitive.

III.15.13 (EX-III-15-13).
The bird sees the light.
Se fugol gesiehð ðæt lēoht.
Target and interpretation: Nominative masculine **se fugol** is the perceiver; neuter accusative **ðæt lēoht** is the light seen. **Gesiehð** is present third singular. The object has the same surface as a nominative neuter phrase, but its role follows the clause. No extra finite or infinitival complement is needed when only the light is named.

III.15.14 (EX-III-15-14).
The men will see the stars.
Đā męnn gesēoð ðā steorran.
Target and interpretation: Đā męnn is the nominative plural subject, and **ðā steorran** the accusative plural stars. **Gesēoð** is a finite plural present with future reference, not an infinitive. Do not replace it with **gesēon** solely because the English has *will*, or use the singular **gesiehð** with the plural men.

III.15.15 (EX-III-15-15).
As long as you (plur.) fed the hungry, you did it to the Lord.
Swā lange swā gē fēddon ðā hungrigan, gē dydon hit ðǣm dryhtne.
Target and interpretation: Both occurrences of *you* are plural: **gē fēddon** and **gē dydon**. The hungry are weak accusative plural **ðā hungrigan**; **hit** is the deed done, and **ðǣm dryhtne** the dative person to whom it is reckoned. The local help supplies **swā lange swā**. Cook's note17 explains its biblical *inasmuch as* force: the deeds to the hungry count as done to the Lord. Duration is not a mandatory interpretation. Do not exchange the recipient and the deed, use singular verbs, or treat the supplied connection as an unaided temporal-clause target. [4]

III.15.16 (EX-III-15-16).
When did you see the stranger sick?
Hwonne gesāwon gē ðone cuman untrumne?
Target and interpretation: The model uses plural **gē** with preterite **gesāwon**. The English leaves *you* unmarked, so singular **Hwonne gesāwe ðū ðone cuman untrumne?** is also valid; a consistent dual interpretation is possible where two addressees are understood. The stranger and his perceived condition are both masculine accusative singular. Strong **untrumne** is an object predicate; a weak adjective inside an attributive *the sick stranger* phrase would not demonstrate this stated construction.

III.15.17 (EX-III-15-17).
The hungry man came to the ships.
Se hungriga mann cōm tō ðǣm scipum.
Target and interpretation: The man is singular subject of past **cōm**. **Hungriga** is weak masculine nominative singular after **se**. The ships are dative plural **ðǣm scipum**, governed by destination **tō**, not objects of a transitive *come*. Strong **hungrig** would miss the selected definite attributive pattern; accusative **scipu** would miss the destination frame.

III.15.18 (EX-III-15-18).
The soldier brought us the horses' fodder.
Se cęmpa tōgelǣdde ūs ðāra horsa fōdor.
Target and interpretation: Tōgelǣdde is singular preterite agreeing with the soldier. Dative **ūs** names the recipients; accusative singular **fōdor** is what was brought. Inside that object phrase, genitive plural **ðāra horsa** identifies the horses whose fodder it is. The horses themselves are not the things brought. Keep the head's accusative separate from its dependent's genitive and from the recipients' dative.

III.15.19 (EX-III-15-19).
The farmer has the blacksmith's hammer.
Se ierðling hæfð ðæs smiðes slęcge.
Target and interpretation: The farmer possesses accusative feminine singular **slęcge**. Its dependent **ðæs smiðes** is genitive masculine singular, identifying the blacksmith. The article agrees with the genitive possessor, not with the feminine hammer. Do not make the hammer genitive or the blacksmith an additional accusative object.

III.15.20 (EX-III-15-20).
Who has the tailor's needles?
Hwā hæfð ðæs sēameres nǣdla?
Target and interpretation: Nominative **hwā** is the person who has the needles; **hæfð** is the finite singular verb. **Nǣdla** is accusative feminine plural, with genitive singular possessor **ðæs sēameres**. The original says **tailor's**, not sailor's. A singular needle or a different possessor loses the requested meaning; the question word is not accusative simply because something is possessed.

III.15.21 (EX-III-15-21).
I hear the bellows (169) blow.
Ic hīere ðā bęlgas blāwan.
Target and interpretation: Ic is the subject of first-singular **hīere**. **Ðā bęlgas** is the accusative plural perceived actor, with plain infinitive **blāwan** naming what the bellows do. Cook's **(169)** points to the infinitive construction. The new hearing frame is explicitly taught; it is not assumed merely from the earlier seeing frame. A plural finite **blāwað** would replace the infinitive and change the construction.

III.15.22 (EX-III-15-22).
Do (om.) you (sing.) see the hammers smite?
Gesiehst ðū ðā slęcga slēan?
Target and interpretation: Follow the explicit omission of English *Do*: **gesiehst** itself is the finite second-singular question verb, agreeing with **ðū**. Feminine accusative plural **ðā slęcga** is the perceived actor of plain **slēan**. Here striking is used without naming the thing struck. Do not add a dummy **dōn**, make **slēan** agree with the hammers, or replace singular **ðū** by plural *you*.

R. The stranger and the monk

R01. Pronouns in the stranger's account.

Occurrence	Referent	Case and governing construction
hine, after the arrival	the stranger	Accusative singular experiencer with hyngrede
him, after sealde	the stranger	Dative singular recipient with sealde
mē, in the stranger's quotation	the stranger speaking	Dative singular person with forwiernst
ðē, in the monk's quotation	the stranger addressed	Accusative singular person fed, with fēde

Target and interpretation: All four pronouns refer to the same stranger, but their case follows the current construction. Quoted **mē** and **ðē** change speech role, not real-world referent: the stranger speaks first, and the monk then addresses him. Do not identify the monk as **ðē**, or make an accusative experiencer into a nominative subject because the English translation uses *he*.

R02. The account's genitives and weak noun.

Đāra munuca is a genitive plural whole selected by nominative singular **ān**: one of the monks. **Mętes** is genitive singular food governed directly by **forwiernst**. These are different reasons for the same case.

Cuma in the first sentence is nominative singular with **sum**, the arriving subject. Each later **se cuma** is likewise nominative, as the stranger speaks and then eats. **Đone cuman** after **geseah** is accusative singular, the person seen.

Target and interpretation: Assign case from the actual relation, not from the ending alone. The genitive group's plurality does not make **ān** plural, and the weak noun's **-an** does not itself mean plural. Selected genitive plural **munuca** must not be replaced by a spelling guessed from another headword variant.

R03. Changing the means phrase.
Gōde is strong masculine singular instrumental, agreeing with **męte** in the monk's bare means phrase. With **mid**, the phrase is:
mid gōdum męte — with good food.
Target and interpretation: The means relation stays the same, but **mid** governs dative, so the adjective changes from distinct instrumental **gōde** to dative **gōdum**. The noun's surface stays **męte**. Rewriting the rest of the reply is unnecessary; leaving **gōde** after **mid** would fail this conversion.

R04. The stranger and the monk: full translation.
A certain stranger came to the inn. He was hungry, and he was sick. One of the monks saw the stranger. The monk gave him food and water. The stranger said, "You do not deny me food." The monk said, "I feed you with good food." The stranger ate the food and drank the water.
Target and interpretation: Preserve the full arrival, exchange and resolution. The stranger is hungry, receives the food, speaks the first quotation, and finally eats and drinks; the monk gives and feeds. *Guest* for *stranger*, *lodging-house* for *inn*, and natural English order are acceptable. Hunger does not mean that someone made him hungry, and **męte**s denotes the thing not denied, not a possessor. Speaker and addressee change between the quotations; **mē** in the first and **ðē** in the second nevertheless refer to the same stranger, as R01 explains.

S. The Day of Judgment

S01. The Judgment tableau: participants and clauses.

The **Son of Man** comes, accompanied by all the angels. **All nations** are gathered before him; he separates them into two groups, with a shepherd's separation of sheep and goats as the comparison. He then places the sheep at his right and the goats at his left.

Finite clause	Boundary and interpretation
1. Coming	Witodlice Mannes Bearn cymð on his mægenðrymme. The attached and ealle ęnglas samod mid him tō ðǣm miclan dōme leaves a coming predicate understood.
2. Sitting	Ðonne sitt hē on ðǣm setle his mægenðrymnesse.
3. Gathering	and bēoð gegaderode ætforan him ealle ðēoda. The subject follows its plural passive.
4. Dividing	and hē tōscǣt hīe on twā.
5. Comparison	swā-swā scēaphierde tōscǣt scēap fram gātum.
6. Placement	Ðonne gelōgað hē ðā scēap on his swīðran hand, and ðā gǣt on his winstran. The coordinated final object/side phrase shares gelōgað.

Target and interpretation: There are six overt finite verbs: **cymð, sitt, bēoð, tōscǣt, tōscǣt, gelōgað**. **Gegaderode** is a participle, not a seventh finite verb; the angels have an understood predicate, not another written one. In the passive, **ealle ðēoda** is nominative feminine plural, the nations gathered; **ealle** is the supplied feminine **-e** variant. The source does not name the gathering agent. Natural masculine **hē/him** refers to the male person called by the grammatically neuter title **Bearn**. Do not turn the angels into objects of **mid** or treat the nations as those doing the gathering.

S02. Separation and placement.

Hīe is accusative plural, referring to the assembled nations and governed by the first **tōscǣt**. In the placement clause, **ðā scēap** is neuter accusative plural and **ðā gǣt** feminine accusative plural; both are objects of **gelōgað**. In the shepherd comparison, **scēap** is again neuter accusative plural, whereas **fram** governs feminine dative plural **gātum**.

Target and interpretation: Distinguish the entities separated or placed from the subject performing those actions. Endingless **scēap** need not be singular; **gǣt** is the selected umlauted plural in its object position. Do not call these placement objects nominative because the plural article has the same spelling in both cases, or make **gātum** accusative after **fram**.

S03. Then and just as.
Both **ðonne** occurrences mean **then**. Each sequences a new sentence in the tableau: then he sits, and then he places the animals. **Swā-swā** means **just as** and introduces the finite shepherd-comparison clause.
Target and interpretation: A sequencing adverb does not itself subordinate the following clause. The two instances of **ðonne** do not form a *when … then* correlation, and neither means comparative *than*. The supplied **swā-swā** clause compares two separations; it is not another event that happens after the division of the nations.

S04. The Judgment tableau: full translation.
Now the Son of Man will come in his majesty, and all the angels together with him to the great judgment. Then he will sit on the throne of his majesty, and all nations will be gathered before him, and he will separate them into two groups, just as a shepherd separates sheep from goats. Then he will place the sheep on his right hand, and the goats on his left.
Target and interpretation: Translate the complete three-sentence tableau, ending before the royal speech. A consistent present rendering is also defensible; the judgment context supports the model's future. *Seat/throne*, *glory/majesty*, *as/just as*, and *at his right/left side* can vary naturally. English may repeat the understood coming of the angels and the final *hand*. Preserve the passive gathering, the division into two groups, and the general shepherd comparison. The two nouns for majesty are distinct source words, and **setle his mægenðrymnesse** has the locally supported characterizing genitive. The right/left expressions use the supplied bounded side-frame; do not infer their case solely from motion or from weak **-an**. [5]

Source and form notes

[1] Cook, *Exercises in Old English* (1895), Group III, Exercises13–15, printed pp6–7 / PDF14–15. Punctuation spacing and typographic apostrophes follow the chapter's declared transcription policy. All 55 numbered prompts are retained.

[2] Cook, *A First Book in Old English*, 2nd ed. (1895), §43.8, printed p30, for **fæder**, and §52, printed p36, for **gāt**. Selected forms and admitted variants are distinguished in the tables; neither table is an unrestricted historical reconstruction.

[3] Cook, §129, printed p77, and §193a, printed p103; Fulk, *An Introductory Grammar of Old English* (2020), §123, printed pp89–90. The supported **unne** is common to the cited treatments; their imperative/subjunctive terminology differs. The indicative second-singular gap is limited to the evidence used for this course.

[4] Cook, §§174–178, printed pp97–99, for instrumental usage. The right-hand expression is corroborated by **standað** in the unassigned continuation on p134; its static verb does not change the attested accusative. The local drinking frame comes from Reader III, p136, editorial lines5–6. The **swā lange swā** help retains p135, original note17, including the *inasmuch as* interpretation. These corroborating spans do not enlarge the assigned reading.

[5] Cook, Reader III, *The Day of Judgment*, printed p134 / PDF150, the selected opening three sentences, editorial prose lines1–7 anchored by the printed marginal5. The exact source text and its fourteen original notes remain separate from the nine local help groups and from this new English translation.

UNIT 11

Answer key

These answers preserve each task's meaning and stated construction. Other grammatical word orders and documented forms are acceptable. Where a task specifies a conjunction, selected paradigm or viewpoint, distinguish a valid alternative from an answer that meets that particular target. Equivalent English translations need not reproduce the model's wording.

The key covers all 92 tasks. Cook's three complete sets retain their original English prompts and numbering; the Old English answers and explanations are new teaching material. The fourteen translated teaching examples are not additional exercises. [1]

In complete form tasks, supply every labeled cell even when several cells share a spelling. In translations, agreement follows grammatical gender and number. The new participles are base forms: the earlier bare-predicate passive permits the uninflected bases used below, including with plural subjects. Correctly evidenced inflected predicates may also be valid, but an extra ending is not required merely because the subject is plural.

Mood must be read with the clause's function and context. A purpose is an intended outcome; an asserted result is presented as occurring. A concessive subjunctive can admit a fact. A preterite subjunctive in the stated contrary-present condition refers to the present. Shared spellings, especially first-singular forms, do not identify mood by themselves. The local Cook and reading helps remain available: supplied expressions are not tests of unaided recall. [2]

F. Complete forms

F01. Bæð, geat and sīðfæt.

Case	bæð singular	bæð plural	geat singular	geat plural
Nominative	bæð	baðu	geat	gatu
Genitive	bæðes	baða	geates	gata
Dative	bæðe	baðum	geate	gatum
Accusative	bæð	baðu	geat	gatu

Requested sīðfæt cell	Form
Nominative plural	sīðfatas
Dative plural	sīðfatum

Explanation: Bæð keeps æ throughout the singular and uses bað- throughout the selected plural; geat similarly has singular geat- and plural gat-. Sīðfæt has its own specified plural stem sīðfat-. These changes are lexical, not a rule changing every æ or ea before an ending. The attested dative plural geatum is a valid alternative to selected gatum; it does not replace the other selected plural cells. Do not give masculine -as plurals to the two neuters. [3]

F02. Complete seolh.

Case	seolh singular	seolh plural
Nominative	seolh	sēolas
Genitive	sēoles	sēola
Dative	sēole	sēolum
Accusative	seolh	sēolas

Explanation: Nominative and accusative singular seolh retain h and short eo. Every ending-bearing cell uses sēol-, with both h-loss and vowel lengthening. A differently ordered table is equivalent if its labels are correct. Leaving h before the endings or retaining short eo loses part of the requested alternation; do not transfer a different h-noun's pattern to this lexical system. [3]

F03. Complete sumer and winter.

Case	sumer singular	sumer plural	winter singular	winter plural
Nominative	sumer	sumeras	winter	wintras
Genitive	sumeres	sumera	wintres	wintra
Dative	sumere	sumerum	wintre	wintrum
Accusative	sumer	sumeras	winter	wintras

Explanation: Sumer retains its medial vowel before these endings; winter loses the medial e, giving wintr-. The documented alternatives sumera and wintra may each serve genitive singular, dative singular or nominative plural. They are acceptable in those cells and need not be recalled in addition to the selected table. Their existence does not authorize -a in every case, or syncope in sumer. [3]

F04. Diagnostic adjective forms.

Word and requested cell	Form
Blæc: strong masculine accusative singular	blæcne
Blæc: strong feminine nominative singular	blacu
Blæc: weak masculine nominative singular	blaca
Stille: strong masculine accusative singular	stilne
Fægerra: masculine nominative singular	fægerra
Fægerra: feminine nominative singular	fægerre
Fægerra: neuter nominative singular	fægerre
Dēorwierðra: masculine dative plural	dēorwierðrum
Dēorwierðra: feminine dative plural	dēorwierðrum
Dēorwierðra: neuter dative plural	dēorwierðrum

Explanation: Blæc has æ before consonantal -ne, but a before the selected vowel endings. Stille simplifies ll before consonantal -ne: stilne. Both comparatives use weak endings; the three dative plurals coincide. The selected forms, rather than a different synonym or degree of comparison, answer this form task. Do not retain ll in stilne or substitute strong endings for the comparatives. [3]

F05. Two complete indicative systems.

scęððan

Person and number	Present	Preterite
1 sg.	scęððe	scęðede
2 sg.	scęðest	scęðedest
3 sg.	scęðeð	scęðede
1–3 pl.	scęððað	scęðedon

genēalæcan

Person and number	Present	Preterite
1 sg.	genēalæce	genēalæcte
2 sg.	genēalæcst	genēalæctest
3 sg.	genēalæcð	genēalæcte
1–3 pl.	genēalæcað	genēalæcton

Explanation: Scęððan uses the selected weak system: the present retains ðð in scęððe/scęððað, whereas scęðest/scęðeð and the dental preterite scęðede have single ð. The retained ending vowels distinguish this selected short-stem pattern. Genēalæcan has present -c- and selected preterite -ct-; its documented -ht- alternative, as in genēalæhte, is also valid. Both preterites have second-singular -est and plural -on. Do not invent a strong past for the requested scęððan table or let identical plural forms erase their three person labels. [4]

F06. Feohtan and bringan diagnostics.

Requested indicative cell	Feohtan	Bringan
Present second singular	fiehtst	bringst
Present third singular	fieht	bringð
Preterite first singular	feaht	brōhte
Preterite second singular	fuhte	brōhtest
Preterite first plural	fuhton	brōhton

Explanation: Feohtan has a strong vowel series: first-singular feaht differs from second-singular fuhte and plural fuhton. Bringan has the dental preterite brōht-, with long ō, despite its strong-looking present. The documented full or unmutated present variants of feohtan are valid language; the displayed fiehtst/fieht are the requested selected forms. Do not make the second-singular strong past feaht or remove the dental formation from brōhte. [4]

F07. Present and past participle bases.

Verb	Present participle	Past participle
Fōn	fōnde	fangen
Findan	findende	funden
Fēdan	fēdende	fēded
Geweorðian	geweorðiende	geweorðod
Hȳdan	hȳdende	hȳded

Explanation: The ordinary present-participle ending is -ende, with -iende in the weak-II stem geweorðiende; contracted fōn has fōnde. Strong fangen/funden have -en and their lexical past-participle stems. The weak past bases have dental -ed or -od. Contracted fēd and hȳd are defensible past-participle variants when that analysis is clear. Do not produce fōnende, confuse fangen with the finite past fēng, or substitute a finite third-person ending for a participle ending. [4]

F08. Commands and number contrasts.

System	Singular	Plural
Gewītan: command	gewīt	gewītað
Hȳdan: preterite indicative third person	hȳdde	hȳddon
Scēawian: present indicative third person	scēawað	scēawiað
Geweorðian: present indicative third person	geweorðað	geweorðiað

Explanation: Gewīt addresses one person; gewītað addresses several. The past third-person contrast is -e/-on after hȳdd-. The two weak-II presents distinguish singular -að from plural -iað. The form labels matter even where a command and an indicative can share a surface. Another verb meaning go would not supply the requested gewītan cells; do not omit the i that distinguishes these weak-II plurals. [4]

A. Clause analysis

A01. Past when and then.

Đā se munuc cōm, đā sealde se mann him wæter.

When the monk came, the man gave him water.

The subordinate temporal clause is **đā se munuc cōm**; cōm is third-singular preterite indicative. The main clause is **đā sealde se mann him wæter**; sealde is third-singular preterite indicative in this factual narration. The first đā means when; the second correlates with it as then. English may omit then. Him is the monk, the dative recipient. Neither đā is an article here, and the spelling sealde alone does not prove subjunctive mood.

A02. Repeated visits.
Đonne gē cumað, ðonne helpe ic ēow.
Whenever you come, I help you.
Đonne gē cumað is the temporal subordinate clause, with second-plural present indicative cumað. The second ðonne is the main-clause then; helpe is first-singular present indicative in the stated recurring situation. Ēow is the plural dative person helped. When you come, then I help you is equivalent. Translating ðonne as than misses the temporal relation; the first-singular spelling helpe alone cannot distinguish indicative from subjunctive.

A03. Simultaneous actions.
(a) Đā-hwīle-ðe hē æt, ic bær wæter.
(b) Mid-ðȳ hē æt, ic bær wæter.
Both statements mean **While he ate, I carried water**.
Đā-hwīle-ðe and mid-ðȳ introduce the accompanying temporal circumstance. Æt is third-singular and bær first-singular preterite indicative. Neither sentence by itself says that the eating caused the carrying. As he was eating is an idiomatic English alternative; it does not change the Old English simple-preterite analysis. Because would assert a causal relation that these words do not themselves express.

A04. Before and until an anticipated arrival.
(a) Ne far, ær ic cume.
(b) Wes hēr, oð-ðæt ic cume.
Do not go before I come. Be here until I come.
Far and wes are singular commands. In each selected temporal clause, cume is first-singular present subjunctive: the coming is still anticipated. Its shape is identical to the first-singular present indicative, so context and construction establish this analysis. Stay here until I arrive is an equivalent English rendering. No distinct future ending or willan is required, and the spelling cume alone does not settle mood.

A05. A stated reason.
Ic helpe ðē, for-ðon-ðe ðū eart untrum.
I help you because you are sick.
For-ðon-ðe ðū eart untrum gives the reason; **ic helpe ðē** is the action explained by it. Eart is second-singular present indicative. Ðē is the dative person helped. Since you are sick is equivalent when since is causal. Reversing reason and action changes the statement, and so that would turn a stated fact into an intended purpose.

A06. Three functions of ðæt.
(a) Ic wāt ðæt se munuc cymð.
(b) Se munuc cymð, ðæt hē mē helpe.
(c) Se munuc is swā gōd, ðæt hē mē hilpð.

Sentence	Translation	Function and finite verb
(a)	I know that the monk comes.	Content; cymð, third-singular present indicative.
(b)	The monk comes so that he may help me.	Intended purpose; helpe, third-singular present subjunctive.
(c)	The monk is so good that he helps me.	Asserted result; hilpð, third-singular present indicative.

The first clause supplies what is known; the second states why he comes; the third presents helping as the result. Comes/is coming and so that he may help/in order to help are defensible English choices. They do not make the three Old English clauses interchangeable. The spelling ðæt neither fixes the function nor requires subjunctive mood in every occurrence.

A07. An outcome to prevent.
Se mann hēold ðæt dēor, ðȳ-lǣs-ðe hit ðone męte nōme.
The man held the animal lest it take the food.
Equivalently: he held it so that it would not take the food. **Ðȳ-lǣs-ðe hit ðone męte nōme** gives the negative purpose; nōme is third-singular preterite subjunctive. The intended prevention concerns the taking, and the clause does not assert that taking occurred. The conjunction supplies the negative purpose. Negating the main verb would instead say that the man did not hold the animal.

A08. A concession that admits a fact.
Ðēah hē sīe untrum, hē hilpð mē.
Although he is sick, he helps me.
Sīe is third-singular present subjunctive of wesan. The concessive clause admits the illness as a circumstance despite which he helps. It is compatible with the explicitly accepted fact of his illness; subjunctive does not mean false. Though or even though gives the same relation. If would instead leave the illness as a condition and would miss this task's stated concession.

A09. An open condition and an absent person.
(a) Gif hē is hēr, hē hilpð mē.
(b) Gif hē wǣre hēr, hē hulpe mē.

Sentence	Translation	Finite forms
(a)	If he is here, he helps me.	Is and hilpð: present indicative, third singular.
(b)	If he were here, he would help me.	Wǣre and hulpe: preterite subjunctive, third singular.

In (a), his presence remains open; a forward-looking he will help me can also fit its consequence. In (b), the stipulated absence is now, so both preterite subjunctives concern a contrary-present situation. They do not assert a past visit. Gif alone requires neither this subjunctive pair nor the indicative pair; English would does not compel an added willan.

A10. Question, temporal clause and comparison.
(a) Hwonne cymð se munuc?
(b) Ðonne se munuc cymð, ic helpe him.
(c) Se munuc is ieldra ðonne se fiscere.
When does the monk come? When the monk comes, I help him. The monk is older than the fisherman.
Hwonne asks a direct question. The first ðonne introduces a subordinate temporal clause; the last ðonne introduces the comparison standard. In that comparison se fiscere is nominative, with the repeated copula understood. When is the monk coming? and whenever the monk comes are defensible contextual renderings of the first two. A single when or than gloss cannot account for all three constructions.

A11. Who performs the intended action?
(a) Se fiscere cōm tō helpanne ðǣm męnn.
(b) Se fiscere cōm, ðæt se munuc ðǣm męnn hulpe.
The fisherman came to help the man. The fisherman came so that the monk might help the man.
In the first sentence the understood helper in **tō helpanne** is the fisherman, the subject of cōm. In the second, **se munuc** is the explicit subject of finite hulpe, third-singular preterite subjunctive. **Ðǣm męnn** is the dative person helped in both. In order to and in order that are equivalent English renderings. Making the fisherman the helper in the second sentence would ignore its expressed purpose-clause subject.

A12. The day when something happened.
Hit is se dæg ðe hē cōm.
It is the day when he came.
Equivalently: it is the day on which he came. **Se dæg** is the temporal antecedent of relative ðe; cōm is third-singular preterite indicative. The clause identifies the day by the event occurring on it. It asks no question and sets no condition. Replacing ðe with interrogative hwonne merely because both can be translated when would lose the relative construction.

T. Controlled composition

T01. When the father came.
Translate using past ðā … ðā: When the father came, the son gave him water.
Ðā se fæder cōm, ðā sealde se sunu him wæter.
Cōm is third-singular preterite; sealde is the factual past giving. The father is the first clause's subject and the dative recipient him; the son gives. **Ðǣm fæder** can replace him, and grammatical clause orders may differ, but both requested ðā words must remain. Reversing giver and recipient changes the event.

T02. A recurring welcome.
Translate as a recurring event, using ðonne … ðonne: When the fishermen come, the king gives them food.
Ðonne ðā fisceras cumað, ðonne sęlð se cyning him męte.
Cumað agrees with plural fisceras; sęlð agrees with singular cyning. Him is dative plural, the fishermen receiving food. An explicit **ðǣm fiscerum** is equivalent. The specified ðonne … ðonne presents a recurring relation; past-event ðā or singular cymð would fail the requested meaning or agreement.

T03. While the fishermen sat.
Translate with mid-ðȳ: While the fishermen sat in the house, the son carried water.
Mid-ðȳ ðā fisceras sæton on ðǣm hūse, se sunu bær wæter.
Sæton is third-plural preterite; bær is third-singular preterite. On ðǣm hūse is the stationary location, with dative hūse. A correlating ðā can begin the main clause. Ðā-hwīle-ðe could express the same relation, but the task expressly requests mid-ðȳ. The carrying is simultaneous with the sitting, not its intended purpose.

T04. Before I come.
Address one person. The speaker has not yet arrived. Translate with ǣr: Do not go before I come.
Ne far, ǣr ic cume.
Far is the command to one person. Cume is first-singular present subjunctive in this selected anticipated-before clause, although its surface also occurs in the indicative. A different grammatical order is acceptable; plural farað would address the wrong number. The arrival is expected, so an English future setting does not require an extra future auxiliary.

T05. Until the fishermen come.
Address several people. The fishermen have not yet arrived. Translate with oð-ðæt: Be in the house until the fishermen come.
Wesað on ðǣm hūse, oð-ðæt ðā fisceras cumen.
Wesað addresses several people; **bēoð** is also an available plural command. On ðǣm hūse has the locative dative. Cumen is third-plural present subjunctive in the selected anticipated-until clause; ordinary indicative cumað would not express the specified mood target. Singular wes or cume would lose a required number distinction.

T06. Because the man is thirsty.
Translate with for-ðon-ðe and the adjective ðurstig: The monk gives the man water because the man is thirsty.
Se munuc sęlð ðǣm męnn wæter, for-ðon-ðe se mann is ðurstig.
The man receiving water is dative **ðǣm męnn**; the causal clause has nominative **se mann** and indicative is. Masculine singular ðurstig is the agreeing predicate. A clear hē may replace the repeated se mann, and clause order may vary. Do not make the person receiving water accusative or use a purpose subjunctive for this stated reason.

T07. A different subject in the purpose clause.
Translate with a finite ðæt purpose clause: The fishermen came so that the monk might help them.
Ðā fisceras cōmon, ðæt se munuc him hulpe.
Cōmon has the plural fishermen as subject; hulpe is third-singular preterite subjunctive with se munuc. Him is dative plural, the people helped; **ðǣm fiscerum** makes the recipient explicit. An ordinary same-subject purpose infinitive would make the fishermen the helpers and would miss the required finite clause with a different subject.

T08. An actual result.
Translate the result as an actual past event, using swā … ðæt: The men were so hungry that they ate the food.
Đā męnn wǣron swā hungrige, ðæt hīe ǣton ðone męte.
Hungrige is strong masculine nominative plural, agreeing with męnn. The eating is asserted to have happened: **ǣton** is third-plural preterite indicative. Hīe may be replaced by a clear repeated noun phrase. A purpose interpretation would change the given result, and singular hungrig would lose the selected adjective agreement.

T09. Preventing the animals from taking food.
Translate with ðȳ-lǣs-ðe: The fishermen held the animals, lest the animals take our food.
Đā fisceras hēoldon ðā dēor, ðȳ-lǣs-ðe ðā dēor ūrne męte nōmen.
Hēoldon is third-plural preterite indicative; nōmen is third-plural preterite subjunctive in the negative purpose. Ūrne agrees with singular masculine accusative męte, not with the animals. A clear hīe may replace the second ðā dēor. The conjunction means lest/so that not; the sentence does not assert that the animals actually took the food.

T10. Illness admitted in a concession.
The monk was in fact sick. Translate using the selected concessive pattern: Although the monk was sick, he helped the man.
Dēah se munuc wǣre untrum, hē healp ðǣm męnn.
Wǣre is third-singular preterite subjunctive in the concession; healp is third-singular preterite indicative in the stated event. **Dēah ðe** is a documented alternative to ðēah. The person helped is dative ðǣm męnn. The subjunctive does not deny the factual illness; replacing healp with hulpe would change the main clause's presentation.

T11. The king is absent now.
The king is absent now. Translate the contrary-present condition: If the king were here, he would help us.
Gif se cyning wǣre hēr, hē hulpe ūs.
Both wǣre and hulpe are third-singular preterite subjunctives, referring here to the stated present situation. Ūs is the dative plural person helped. A grammatical reversal of clause order is acceptable. A factual past rendering or an added willan based solely on English would would miss the selected contrary-present construction.

Cook, Group IV, Exercise 16

16.1.
Gold is more precious (64) than silver.
Gold is dēorwierðre ðonne seolfor.
Dēorwierðre is the weak neuter nominative singular comparative agreeing with mass noun gold. Seolfor is the parallel nominative standard after ðonne. A grammatical comparison using the taught genitive standard is also defensible. Positive dēorwierðe alone would omit more; a superlative would change the comparison.

16.2.
Righteousness is more precious than gold.
Rihtwīsnes is dēorwierðre ðonne gold.
Dēorwierðre is weak feminine nominative singular with rihtwīsnes. Its identical surface to 16.1 does not make the subject neuter. The standard gold has its own gender; it does not control the predicate adjective. A taught genitive comparison is an alternative, but more must remain comparative.

16.3.
The bath is hot.
Ðæt bæð is hāt.
Bæð and its article are neuter nominative singular; hāt is the agreeing strong predicate. Predicate-first Hāt is ðæt bæð preserves the meaning. Masculine se or plural baðu would fail the subject's gender or number.

16.4.
The baths are hot.
Ðā baðu sindon hāt.
Baðu is the selected neuter plural, so the copula is plural sindon. Long-stem hāt has an endingless strong neuter nominative plural. A grammatical predicate-first order is equivalent. The absence of an adjective ending does not make hāt singular; do not add masculine plural -e by analogy.

16.5.
The animals are living.
Ðā dēor sindon cwicu.
Cwicu means alive/living and agrees with neuter plural dēor. English are living permits this ordinary adjective predicate; it does not require a new progressive construction. Dēor is unchanged in nominative singular and plural, but the article, copula and predicate establish the plural here. Do not replace cwicu with a singular predicate.

16.6.
Some pearls are black.
Suma męregrēotan sindon blaca.
Męregrēotan is nominative plural of the weak feminine pearl noun. Suma and blaca are the selected strong feminine plural forms; blaca uses a before the vowel ending. A different grammatical order is acceptable. Masculine plural blace, used of men in 17.7, would give the wrong agreement here.

16.7.
The island is beautiful.
Đæt īgland is fæger.
Īgland is neuter nominative singular and fæger its strong predicate. Fæger is ðæt īgland preserves the meaning with predicate first. The English ending of island offers no guide to Old English gender; masculine se would fail the selected noun agreement.

16.8.
Dolphins swim through the water.
Męreswīn swimmað þurh ðæt wæter.
Męreswīn is an endingless nominative plural, and swimmað is plural. Through is þurh with accusative ðæt wæter. No definite article is required before the indefinite dolphins. Equivalent word order is acceptable; singular swimð loses the plural, while a dative path would miss þurh's selected government.

16.9.
Here are fishes often caught.
Hēr sindon fiscas oft fangen.
Plural fiscas is the subject of the present passive; fangen is the new past-participle base used under the taught bare-predicate option. Hēr and oft retain here and often. An evidenced inflected predicate can be valid, but an added plural ending is not required. Fēngon would instead be active caught, and fōnde is the present, not past, participle.

16.10.
The night is more beautiful than the day.
Sēo niht is fægerre ðonne se dæg.
Fægerre is weak feminine nominative singular, agreeing with niht. Se dæg is the nominative comparison standard. A taught genitive-standard comparison is also defensible. The positive fæger or a predicate governed by day's masculine gender would miss the requested comparison or agreement.

16.11.
The city was distinguished with walls and gates.
Sēo ceaster wæs geweorðod mid weallum and gatum.
Wæs keeps Cook's past time; geweorðod means distinguished/adorned. Mid takes the dative plural equipment weallum and gatum. The attested geatum is a valid dative-plural alternative. Walls and gates do not form a compound subject, and nominative gatu would lose the case required after mid.

16.12.
Summer comes, and then winter.
Sumer cymð, and ðonne cymð winter.
Sumer and winter are separate singular subjects. Repeating cymð supplies the second predicate left understood in English; **Sumer cymð, and ðonne winter** preserves the same ellipsis. Here ðonne is sequential then, not a subordinating when or comparative than. No extra season-noun ending is required in the nominatives.

16.13.
The sun shines over all.
Sēo sunne scīnð ofer eall.
The model takes eall as neuter accusative singular everything after ofer. **Ofer ealle**, with masculine accusative plural all people, is also defensible if that interpretation is stated. Sunne is a singular weak feminine subject. Do not make eall an unexplained plural or let the number of the things illuminated control scīnð.

16.14.
The old man came to the house.
Se ealda mann cōm tō ðæm hūse.
Se ealda mann is a definite nominative phrase, hence weak ealda. Cōm is third-singular preterite; tō takes dative ðæm hūse as the destination. Grammatical word-order changes are acceptable. Accusative hūs after tō or strong eald inside this selected definite phrase would lose a target distinction.

16.15.
Here are also found lead and iron.
Hēr sindon ēac lēad and īsern funden.
Lēad and īsern are two coordinated nominative metal nouns; together they take plural sindon. Funden is the past-participle base, with the bare-predicate option. A documented inflected predicate is a valid alternative, but the model needs no invented agreement ending. Preserve both ēac and hēr; finite fundon would make the statement active.

16.16.
Put not your hand into the fire.
Ne dō ðīne hand on ðæt fȳr.
The model addresses one person: negative command ne dō, accusative hand with feminine accusative ðīne, and the goal on ðæt fȳr. A consistent plural-address version, **Ne dōð ēowre hand on ðæt fȳr**, is also possible. The goal is accusative; a locative dative would express being in the fire rather than the required placement into it.

Cook, Group IV, Exercise 17

17.1.
The soldier takes the gem.
Se cęmpa nimð ðone gimm.
Cęmpa is a weak masculine nominative singular, although its nominative ends in -a. Nimð agrees with it; ðone gimm is the accusative thing taken. Another grammatical order is acceptable. Making gimm nominative with se would fail to distinguish the patient from the soldier.

17.2.
The rain injures the tower.
Se regn scęðeð ðǣm torre.
Scęðeð is the selected third-singular present of scęððan. The harmed tower is dative **ðǣm torre**, despite English injures taking a direct object. Equivalent ordering does not alter that government. Accusative ðone torr would miss the selected lexical frame; rain remains singular regn in its ordinary weather use.

17.3.
The whale swims.
Se hwæl swimð.
Hwæl is masculine nominative singular, with third-singular swimð. The verb is intransitive here. Reordering the subject and verb without changing the declarative meaning can be grammatical. Plural swimmað would not agree with this singular whale.

17.4.
Fishermen caught seals.
Fisceras fēngon sēolas.
Fisceras is the plural subject of preterite fēngon; sēolas is the accusative plural object of catching. Sēol- loses h and has long ēo before the plural ending. No definite articles are required by Cook's indefinite nouns. Retaining seolh as the plural object or using present fōð would lose the noun or tense target.

17.5.
The hungry sheep are not fed.
Đā hungrigan scēap ne sindon fēded.
The definite adjective is weak plural hungrigan, agreeing with neuter plural scēap. The supplied ne sindon negates the plural passive; fēded is its past-participle base. Contracted fēd is a documented participial alternative when its analysis is clear. This is a statement, not a command not to feed; English hungry sheep does not license singular agreement.

17.6.
The man’s wife is beautiful.
Đæs mannes wīf is fæger.
Đæs mannes is the genitive possessor, and wīf is the neuter nominative subject. Fæger therefore has neuter singular predicate agreement. A grammatical placement of the genitive after its head can preserve the sense. Feminine agreement based on the wife's natural sex would ignore the noun's grammatical gender.

17.7.
Some men are black.
Sume męnn sindon blace.
Sume męnn is an indefinite masculine nominative plural phrase, with strong masculine plural blace. Compare feminine blaca in 16.6. Other grammatical orders are acceptable. The singular stem mann and feminine adjective ending would each lose a required plural or agreement distinction.

17.8.
The carpenter will clothe his son.
Se trēowwyrhta scrȳt his sunu.
The present scrȳt can carry the future reference stated in the prompt. His refers to the carpenter and modifies accusative sunu, the person clothed. An explicitly volitional translation can be valid if correctly constructed, but a form of willan is not required merely by English will. Do not substitute dative suna for the selected direct object or change the possessor to a different person.

17.9.
Depart from me, for I am (om. a) sinful man, (om. O) Lord.
Gewīt fram mē, for-ðon-ðe ic eom synfull mann, Dryhten.
Gewīt is the singular departure command; fram mē has the dative. For-ðon-ðe introduces the stated reason with indicative eom. Bare synfull mann and direct-address Dryhten preserve Cook's instructions to omit a and O. The earlier causal for-ðām is a defensible alternative. Plural gewītað would address the wrong number in this selected Lord-address reading.

17.10.
They shall drink, but ye shall be thirsty.
Hīe drincað, ac gē bēoð ðurstige.
Hīe and gē require different persons but both take plural verbs. The presents express the indicated future setting; bēoð is particularly natural for the prospective state. Ðurstige agrees with the addressed plural. A future-context sindon can also be defensible. Do not infer that both English shall words demand the same modal auxiliary, or leave the predicate singular.

17.11.
He said to her, Give me, I beseech thee, water to drink; for I am thirsty.
Hē sægde hiere: Sęle mē, ic bidde ðē, wæter drincan; for-ðon-ðe ic eom ðurstig.
Hiere is the dative female addressee of sægde. Sęle is a singular command; mē is its dative recipient, while parenthetic ðē is the accusative person entreated by bidde. The visible help supplies **sęle mē wæter drincan**, with plain drincan and no tō. A grammatical placement **ic ðē bidde** is equivalent. Preserve the parenthesis and causal reason; do not treat every similar pronoun surface as having the same case.

17.12.

He is not (om. a) God of (om. the) dead, but of (om. the) living.

Hē nis God dēadra, ac cwicra.

The supplied nis is the negative copula. Dēadra and cwicra are bare strong genitive plurals naming the dead and the living; the second shares the understood head God. Their articleless form preserves Cook's controls. Article-plus-weak forms could be grammatical in another phrasing, but would not meet those controls. The -ra forms are genitives, not nominative subjects.

17.13.

The sun shines on (ofer) the righteous and the unrighteous.

Sēo sunne scīnð ofer ðā rihtwīsan and ðā unrihtwīsan.

Ofer governs both accusative plural personal-adjective groups. Their articles require weak rihtwīsan and unrihtwīsan, here naming righteous and unrighteous people. The second article may be shared in a defensible coordination. Keep the specified ofer rather than selecting a preposition solely from English on; bare strong endings would miss the selected definite construction.

17.14.

Ye are (om. the) light of the world.

Gē sindon ðære worulde lēoht.

Gē has plural sindon. Lēoht is the bare nominative predicate, while ðære worulde is its genitive dependent. **Gē sindon lēoht ðære worulde** is also grammatical. Cook omits the article with light, not the world. The singular/mass predicate does not change the plural personal subject's agreement.

17.15.

The twelve gates were twelve pearls.

Ðā twęlf gatu wǣron twęlf męregrēotan.

Twęlf is the familiar invariant numeral. Gatu is nominative plural subject; męregrēotan is nominative plural predicate identifying the gates as pearls, not a genitive partitive. Wǣron supplies the past. Another grammatical predicate order is acceptable. Do not replace gatu with singular geat or carry a genitive construction over from the higher numeral in 17.17.

17.16.
The street of the city was gold.
Ðære ceastre strǣt wæs gold.
Strǣt is the singular nominative subject; ðære ceastre is its genitive dependent. Gold is a bare predicate noun. **Sēo strǣt ðære ceastre wæs gold** is a defensible alternative. The city is not the direct subject, and gold need not become an agreeing adjective.

17.17.
Those that ate were four thousand men (154. c), besides women and children.
Đā ðe æton wæron fēower ðūsend manna, būtan wīfum and bearnum.
Đā ðe æton identifies those who ate; both æton and wæron are plural preterites. The printed help supplies the complete **fēower ðūsend manna** phrase, including genitive plural manna. Būtan governs dative wīfum and bearnum. Those who ate and the people who ate are equivalent interpretations. Do not replace the locally supplied genitive with an accusative or count the women and children inside the stated four thousand men.

Cook, Group V, Exercise 18

18.1.
Blessed (p.p.) be God, the Father of our Lord Jesus Christ, the Father of mercies, and the God of all comfort.
Geblētsod sīe God, ūres Dryhtnes Hǣlendes Crīstes Fæder, mildheortnessa Fæder and ealre frōfre God.
Sīe is an independent blessing wish, with the required past participle geblētsod. God and the two Fæder phrases are nominative names of the same referent. Dryhtnes, Hǣlendes and Crīstes share genitive case in the title/name group; ūres belongs with Dryhtnes. Mildheortnessa is genitive plural mercies, and ealre agrees with feminine genitive singular frōfre. The genitives may follow their heads in a grammatical alternative. Indicative is would turn the wish into a statement, and nominal blētsung would miss Cook's participle control.

18.2.

The winds were favorable.

Đā windas wæron gesyndige.

Windas is nominative plural with preterite wæron. Strong masculine plural gesyndige means favorable here. The exact reading's syncopated gesyndge is a documented source variant; the full form is the selected production model. Singular wind or gesyndig would lose the number distinction, and healthy would miss the wind sense.

18.3.

He wishes to watch their journey.

Hē wille hiera sīðfæt scēawian.

Wille expresses actual wishing and takes plain infinitive scēawian. Hiera is the plural possessor their; sīðfæt is the accusative journey watched. A defensible rearrangement is equivalent. Replacing hiera with his changes whose journey it is; scēawianne is the inflected infinitive and does not answer this willan-plus-plain-infinitive target.

18.4.

The wind and the sea obey him.

Se wind and se sæ hīerað him.

The two nominative subjects take plural hīerað. Sea uses the established masculine se sæ. In the newly specified obey sense, him is dative. The verb and object may be ordered differently without changing the relation. Singular hīerð would ignore the coordination, while treating obey exactly like every English transitive verb would miss its dative government.

18.5.

Not at all in vain fought I with death, as he fought with beasts.

Nālæs hōlunga feaht ic wið dēað, swā hē feaht wið dēor.

Nālæs hōlunga denies that the fighting was fruitless: not at all in vain. Both feaht forms are preterite indicative, first singular with ic and third singular with hē. Wið governs accusative opponents dēað and dēor; swā introduces the factual comparison as he fought. An equivalent grammatical order is acceptable. Do not add ne mechanically, translate the phrase as entirely in vain, or turn this as-clause into a purpose.

18.6.
The time draws near [approaches, 164] (om. the) birth of Christ.
Sēo tīd genēalǣcð Crīstes gebyrde.
Genēalǣcð is third-singular present. The event approached is dative gebyrde, with genitive Crīstes; no article before birth is needed. A grammatical genitive-after-head order can preserve the meaning. Nominative gebyrd would miss genēalǣcan's dative complement, and making Christ the subject would reverse the stated relation.

18.7.
It is the day when (ðe) he was born (ācenned).
Hit is se dæg ðe hē wæs ācenned.
Se dæg is the antecedent of the temporal relative ðe; hē wæs ācenned says he was born. The exact supplied participle retains plain e. The day on which he was born gives the same interpretation. Interrogative hwonne would not satisfy the relative target, and the supplied participle is not evidence for unaided production of a complete birth-verb paradigm.

18.8.
O, wast thou with me, dearest, then, while I rose up against my doom (dōm)?
Ēalā, wǣre ðū mid mē, lēofosta, ðā, ðā-hwīle-ðe ic rās ūp ongēan mīnne dōm?
Wǣre is second-singular preterite indicative in this factual past question; its shape alone does not make it subjunctive. Mid mē expresses accompaniment. Lēofosta is weak masculine singular superlative in direct address; feminine **lēofoste** is equally defensible for an unstated female addressee. Retain then, while, up and against: ðā, ðā-hwīle-ðe, ūp and ongēan mīnne dōm. Rās is first-singular preterite, and the opposed doom/fate is accusative. Do not mistake dearest for a comparative or omit the rising up.

18.9.
The moon is hid (hȳdan, 113), the night is still.
Se mōna is hȳded, sēo niht is stillu.
Mōna is a singular masculine subject with past-participle hȳded. The documented contracted participle hȳd is also valid here. Niht is feminine nominative singular with strong positive stillu. These are two predicates of different kinds: hidden is participial, still is an ordinary adjective. Dictionary headword stille does not automatically supply the requested feminine predicate form.

18.10.

Thou bringst the fisher to his wife.

Đū bringst ðone fiscere tō his wīfe.

Bringst agrees with singular ðū. The brought person is accusative ðone fiscere; tō takes dative wīfe as the destination/person. His identifies the fisherman as the wife's possessor. A grammatical order such as **Đū bringst tō his wīfe ðone fiscere** preserves the relation. Do not treat the fisherman as dative merely because the destination is dative too.

18.11.

Calm is the morn(ing).

Smylte is se morgen.

Smylte is the strong masculine nominative singular predicate agreeing with se morgen. **Se morgen is smylte** preserves the meaning in subject-first order. The initial adjective is not an adverb modifying is; an adverbial form would miss the predicate-agreement target.

18.12.

I know that this was life.

Ic wāt ðæt ðis wæs līf.

Wāt is first-singular present: the knowing is current, while the content **ðæt ðis wæs līf** identifies something in the past. Ðis is neuter nominative singular and līf the predicate noun. A grammatical change in clause order is acceptable if the present knowing and past identification remain. Life is not light; making ðæt a purpose conjunction or replacing wæs with a future form changes the statement.

18.13.

What do ye more than they?

Hwæt dōð gē mā ðonne hīe?

Hwæt is the accusative object of second-plural dōð. Mā compares the amount of doing; ðonne hīe has nominative hīe with the repeated do understood. **Hwæt dōð gē mā ðonne hīe dōð?** makes that predicate explicit. Do not replace adverbial mā with an adjective agreeing with a noun, or make the comparison standard accusative merely because hwæt is the object.

R. The fisherman and his son

R01. Complete translation.

The old fisherman came to the house so that he might help his son. When he came, the son was hungry. The fisherman gave him food. While the son ate, the fisherman carried water. Although the fisherman was old, he helped his son. The son said, “Be here until I come.” He went away and came back and gave his father water.

Interpretation: Preserve the purpose of the first arrival, the simultaneous eating and carrying, the concession about age, and the son's answering act of help. In order to help his son, as the son ate and stay here are equivalent English choices. Came back is a contextual rendering of cōm after the departure, not a separate return prefix. The final he is most naturally the son in this sequence; masculine gender alone does not rule out another referent. Do not omit the final gift or turn the admitted age into a condition.

R02. Three relations in the account.

Relation	Clause	Contribution and finite form
Purpose	ðæt hē his suna hulpe	Why the fisherman came; hulpe is third-singular preterite subjunctive.
Simultaneous time	Mid-ðȳ se sunu ǣt	The son eats while his father carries water; ǣt is third-singular preterite indicative.
Concession	Ðēah se fiscere wǣre eald	Age is admitted despite which the help occurs; wǣre is third-singular preterite subjunctive.

Purpose/intention, while/as and although/though are equivalent labels or translations when these distinctions remain. Calling all three clauses conditions loses their separate functions. The concessive subjunctive does not make the father's age false.

R03. Givers, recipients and possessors.
The fisherman gives the first food, and his son receives it. **Se fiscere** explicitly names that giver; **him** is the dative recipient understood as the son. In **his suna**, his refers to the fisherman and suna is the dative son helped.
At the end, the son is the natural subject of **hē ... sealde**, and his father receives the water. **His fæder** is a dative phrase; fæder has the selected endingless dative singular, while his is the son's genitive possessor. The pronouns' forms alone do not identify one of the two men uniquely. A reasoned alternative antecedent analysis should be distinguished from the account's intended reciprocal sequence, rather than rejected as morphologically impossible. Treating endingless fæder as necessarily nominative would make the recipient a new subject without justification.

R04. The son's expected return.
Ic is the son, whose speech is introduced by **se sunu cwæð**. When he tells his father **wes hēr**, his own coming is still expected. **Cume** is first-singular present subjunctive in the selected anticipated-until clause, formally identical to first-singular indicative cume. The later **cōm**, after **gewāt**, fulfills that expectation on the natural reading of the final hē as the son. Until I arrive is an equivalent rendering. The first person belongs to the quoted speaker, not to the narrator or father; a claim that the ending of cume by itself proves the mood would overstate the morphology.

B. Britain: metals and jet

B01. Complete translation.
Likewise it is also rich in veins of metal—copper and iron, lead and silver. Jet is also found here; the stone is a black gem. If one puts it in fire, then snakes flee away from there.
Interpretation: Initial it is Britain, identified in the introduction. Productive in ores of metals is a defensible rendering of the supported first expression; the four named metals must remain. Gagates is jet, not the agent doing the finding. Generic man may be rendered one, someone or a person. Adders is a valid alternative to snakes. Flēoð means flee, not fly; the conditional claim must not become an unconditional report that someone put the stone in the fire. [5]

B02. The condition and its consequence.
The condition is **gif man hine on fȳr dēð**, if one puts it in fire. Its main clause is **ðonne flēoð ðær næddran onwęg**, then snakes flee away from there. **Dēð** is third-singular present indicative of dōn; **flēoð** is third-plural present indicative of flēon. **Ðonne** is the main-clause then, correlating with the condition.
When someone puts it in fire can express the same general relationship idiomatically, but the requested grammatical label is the gif-condition. Ðonne is neither comparative than nor the subject of flēoð. The plural snakes control that verb; generic man controls singular dēð.

B03. Two different referents.
Initial **hit** refers to Britain, the island identified in the introduction: it is neuter nominative singular in the copular clause. **Hine** refers to **se stān**, the masculine stone just named, and is accusative singular as the thing put into the fire. Thus the passage changes referent.
Britain/the island and the stone/the piece of jet are equivalent contextual descriptions. English it can conceal the gender and case contrast; that does not make the two Old English pronouns interchangeable or make both refer to the island.

S. Æthelwald calms the sea

S01. Complete translation.

Then, after a long time, when we raised our gaze from a distance, we saw on Farne, the island, the father Æthelwald, dear to God, coming out of his secluded place, so that he might watch our journey and see what might happen to us, for he heard the crashing of the storms and of the seething sea. When he then also looked at us and saw us placed in distress and despair, he bent his knees to the Father of our Lord Jesus Christ and prayed for our safety and our life. And when he completed that prayer, he then at the same time both calmed the swollen sea and stilled the storm, so that the violence of the storm ceased entirely, and favorable winds brought us to land through the very calm sea. When we then came up onto land and also carried our ship up from the waves, the same storm soon returned and came again; it had ceased for a short time for our sake, and it was very great and strong all that day. Thus people could clearly understand that the short period of calm which had occurred there was granted from heaven at the prayers of that man of God for our rescue.

Interpretation: The opening can be recast as After a long time we lifted our gaze and saw …, provided the distant seeing and temporal sequence remain. Æthelwald is the person seen; **Gode** belongs with **lēofan**, dear to God. Our Lord and Saviour Christ is an alternative rendering of the title group. Our lives is idiomatic English for the collective situation, although līfe is morphologically singular.

The subject **hē** in the paired calming and stilling actions remains Æthelwald. The narrative attributes efficacy to his prayer; a translation should not silently replace the grammatical subject with God. Prayed and ceased are valid simple-past renderings of **wæs gebiddende** and **wæs blinnende**, as Cook's notes permit. A contextual English progressive is possible, but is not forced by the participle's form. Keep the landing, ship carried ashore, storm's return and final inference. Final **forgiefen** means given/granted, not forgiven. [5]

S02. The order of the rescue.

- The sailors see Æthelwald.
- Æthelwald prays.
- The sea becomes calm.
- The sailors reach land.
- The storm returns.

Before its return they have both come ashore and carried their ship up from the waves. Reach land/come ashore are equivalent descriptions, but the ship's removal is a separate completed action in the same temporal clause. Putting the renewed storm before the landing, or stopping the episode at the calm, loses the resolution.

S03. Purpose, question and reason.
The purpose begins **ðæt hē wolde ūrne sīðfæt scēawian, and gesēon hwæt ūs gelumpe**: so that he might watch our journey and see what might happen to us. The local help supplies wolde with its two infinitives in this purpose use; in order to watch and see is also an apt translation. **Hwæt ūs gelumpe** is the dependent question inside that purpose, not a second outer purpose clause.
The reason begins **for-ðon hē gehīerde ðæt gebrec ðāra storma and ðæs weallendes sæs**: because he heard the crashing of the storms and seething sea. It states the circumstance prompting him to come out. A rendering with since is valid if clearly causal. Reducing wolde to private desire alone, or treating the heard noise as an intended outcome, would lose the contrast.

S04. The narrated result.
Tō ðon ðætte introduces the result: the storm's violence ceased entirely, and favorable winds brought the sailors to land through the very calm sea. The sailors are **ūs**, the accusative people brought; **gesyndge windas** is the subject of **gebrōhton**.
The supplied **wæs blinnende** can be translated ceased. Was ceasing may be defensible English in context, but no progressive translation is required merely by the present participle. The two coordinated outcomes are narrated as results, not just things Æthelwald hoped would happen. Leaving out the winds would obscure the expressed agent of the bringing.

S05. Where the temporal clauses end.
The first requested clause extends from **Mid-ðȳ hē ðā ūs ēac scēawode** through **in gewinne and in ōrmōdnesse geseȩtte bēon**. It includes both his looking at them and his seeing their plight. The main action begins **ðā biegde hē his cnēowu**, then he bent his knees.
The second extends from **Mid-ðȳ wē ðā ūp cōmon tō lande** through **fram ðæm ȳðum ūp ābæron**. It includes coming ashore and carrying the ship up. The main action begins **ðā sōna se ilca storm eft hwearf and cōm**, then the same storm soon returned and came again.
When or while can represent mid-ðȳ as context permits. The relevant boundaries, rather than one fixed English conjunction, are the target. Ending the second subordinate clause at lande wrongly detaches the ship's removal from the circumstances completed before the storm returns.

S06. Wæs gebiddende.
Here **wæs gebiddende** can be translated **prayed**. Cook's note points back to the explanation that this be-plus-present-participle construction can have simple-past force. **Was praying** is an idiomatic contextual alternative, but the present participle does not require the English progressive category. The auxiliary wæs gives the past setting; calling the whole event present because gebiddende is a present participle would confuse nonfinite form with finite tense. This local explanation supports the source passage without making every Old English be-plus-participle phrase equivalent to an English progressive. [5]

S07. The meaning of the final inference.
People understand that the brief calm was granted from heaven, at the prayers of the man of God, for the sailors' rescue. **Ðæs Godes weres** identifies whose prayers are meant: Godes depends on weres, not on bēnum as though God were the person praying. **Ūre** in **for intingan ūre hǣle** identifies the sailors whose rescue is at issue.
Given/granted from heaven and for our safety/rescue are defensible translations here. Cook explicitly explains final **forgiefen** as given; forgiven would introduce a meaning that this clause does not express. The content of the inference concerns the specially granted interval of calm, not a permanent end to all storms.

S08. Why the storm returns in the account.
The calm is temporary. After the sailors and their ship are ashore, the same storm returns and remains very great and strong throughout that day. Its short suspension precisely when they needed rescue supports the narrator's explanation that the calm was granted in response to prayer for their safety. A paraphrase such as the storm paused long enough for their escape preserves the point. Saying that the storm ended permanently conflicts with its explicit return; saying that the narrator sees no relation to the prayer omits the final inference.

Source notes

[1] Cook, *Exercises in Old English* (1895), Group IV, Exercises 16–17, and Group V, Exercise 18, printed pp. 8–9; one-based PDF pp. 16–17. Original prompts are retained. All answers and explanatory prose are new teaching material.

[2] Cook, *A First Book in Old English*, second edition (1895), §§194–196, printed pp. 103–105; Fulk, *An Introductory Grammar of Old English* (2020), §§44–45, printed pp. 28–30. The selected purpose/result distinction and factual concessive use follow the reconciled primary evidence, rather than a rule assigning one mood to every occurrence of a conjunction.

[3] Cook, *First Book*, the noun and adjective patterns on printed pp. 28–43, especially §43.4–5 on the season nouns and §58.2 on consonant simplification, with the vocabulary entries cited in the learner's notes. The unassigned continuation on p. 139 attests geatum; it is a valid variant, not an additional reading assignment.

[4] Cook, *First Book*, the selected strong and weak verb systems and participles, printed pp. 54–78; the lexical entries and documented alternatives are specified in the learner's source notes. Complete requested cells are printed above; valid variants do not establish an additional conjugational system.

[5] Cook, *First Book*, p. 139, editorial prose lines 1–4, and pp. 142–143, from editorial line 8 of p. 142 through editorial line 14 of p. 143; one-based PDF pp. 155 and 158–159. On p. 143, note 1 is attached to both wæs gebiddende and wæs blinnende and refers back to p. 142 note 7; p. 143 note 18 explains forgiefen as given rather than forgiven. The complete translations above were independently prepared from the Old English before comparison with the other private witnesses.

UNIT 12

Answer key

The key covers all 76 tasks. Cook's three complete sets retain their original prompts and numbering; the answers, translations and explanations are new teaching material. The twelve translated teaching examples are not additional exercises. Equivalent English wording, defensible Old English word order and documented inflectional alternatives are acceptable. A grammatical answer can nevertheless miss a stated target, such as a particular auxiliary, mood or selected paradigm. [1]

In form tasks, supply every labeled position, including positions with identical spellings. In translation and analysis, distinguish morphological tense from the time relation established by context. An English perfect, pluperfect or future does not mechanically require a corresponding Old English auxiliary. In reports, identify the content's time relative to the reporting situation; a subjunctive does not by itself make the report false. [2]

The productive **habban** construction below has an active subject, an accusative object and a selected past participle. Its finite auxiliary agrees with the subject. The models use bare participles; source usage also permits participles inflected in agreement with the object. A correctly evidenced agreeing alternative is not wrong merely because it differs from the model, but participial agreement is not agreement in person with the finite subject. The twelve indicative construction positions do not constitute twelve new inflected words or exhaust the construction's possible moods. [3]

The **wesan + gewiten** and **wesan + sittende** tasks require recognition, not independent composition. Local Cook and reading helps remain available during the tasks they support. Supplied expressions are not tests of unaided recall. An agentless passive does not name the agent; do not restore one merely from a nearby model.

F. Complete forms and constructions

F01. Fōt.

Case	Singular	Plural
Nominative	fōt	fēt
Genitive	fōtes	fōta
Dative	fēt	fōtum
Accusative	fōt	fēt

Explanation: The selected root-noun system has **fēt** in the dative singular and nominative/accusative plural. Genitive singular and genitive/dative plural retain **fōt-**. Thus neither vowel can be extended through the whole paradigm. The documented dative singular **fōte** and occasional nominative/accusative plural **fōtas** are valid alternatives in those cells; the displayed forms give the requested selected table. A genitive plural made from **fēt-** would miss the assigned alternation. [4]

F02. Brycg and hęre.

Case	Brycg singular	Brycg plural	Hęre singular	Hęre plural
Nominative	brycg	brycga	hęre	hęras
Genitive	brycge	brycga	hęres	hęra
Dative	brycge	brycgum	hęre	hęrum
Accusative	brycge	brycga	hęre	hęras

Explanation: Feminine **brycg** retains **brycg-** before its endings, including accusative singular **-e**. Masculine **hęre** has the selected singular in **-e**, genitive **hęres**, and plural **hęr-** before **-as, -a, -um**. Do not add these endings to the whole nominative as though its final **e** were retained everywhere. Cook's expanded **hęrg-/hęrig-/hęrige-** alternatives are acceptable in the cells to which the learner's table assigns them; they do not authorize arbitrary interchange of stems. A masculine **-as** plural for **brycg** would import the wrong system. [4]

F03. Flēon and grētan: complete indicative systems.

Flēon — strong verb, present and preterite indicative.

Person and number	Present	Preterite
1 sg.	flēo	flēah
2 sg.	flīehst	fluge
3 sg.	flīehð	flēah
1–3 pl.	flēoð	flugon

Grētan — weak verb, present and preterite indicative.

Person and number	Present	Preterite
1 sg.	grēte	grētte
2 sg.	grētst	grēttest
3 sg.	grētt	grētte
1–3 pl.	grētað	grētton

Explanation: Contracted **flēon** has the selected present contrast **flēo-/flīeh-** and strong past **flēah** beside **flug-**. Its second-singular preterite uses the plural stem plus **-e**: **fluge**, with short **u**. Weak **grētan** keeps its long root vowel and forms its past with the dental sequence **-tt-**. Its third-singular present **grētt** and first/third-singular past **grētte** must not be confused. Keep all three plural person labels even when their forms coincide. Documented variants remain valid in their proper cells; a strong past invented for **grētan** does not complete its selected weak system. [5]

F04. Diagnostic indicative forms.

Verb	Present second singular	Present third singular	Preterite second singular	Preterite third plural
gemētan	gemētst	gemētt	gemēttest	gemētton
ādrīfan	ādrīfst	ādrīfð	ādrife	ādrifon
geopenian	geopenast	geopenað	geopenodest	geopenodon
cȳðan	cȳst	cȳð	cȳðdest	cȳðdon

Explanation: Weak **gemētan** has present **gemētt** and preterite stem **gemētt-**, with **-e** in first and third singular, **-est** in second singular, and **-on** in all plural persons. Strong **ādrīfan** has long **ī** in the present but short **i** in the second-singular and plural past stem. Weak-II **geopenian** uses present **geopena-** in these singular cells and preterite **geopenod-**. In selected **cȳst/cȳð**, the dental consonants do not remain as a mechanically concatenated stem and ending; the past retains **cȳðd-**. **Cȳðst** follows the documented analogical retained-dental pattern and is a valid alternative, although **cȳst** matches the selected table. Do not transfer **ādrāf** into its second-singular past or give **geopenian** a weak-I past. [5]

F05. Complete command pairs.

Person and number	flēon	ādrīfan	gemētan	geopenian
2 sg.	flēoh	ādrīf	gemēt	geopena
2 pl.	flēoð	ādrīfað	gemētað	geopeniað

Explanation: Each first form addresses one person, each second form several. Preserve the long vowel in **flēoh**. The weak-II plural **geopeniað** retains **i**; **geopenað** is the selected third-singular indicative, not this plural command. A command may share a spelling with another verbal form, but its function and addressee remain distinct. Substituting indicative **flīehð** for singular **flēoh** misses the command target. [5]

F06. Habban with object and past participle.

Present indicative construction.

Person and number	Old English	English
1 sg.	Ic hæbbe ðæt hūs geworht.	I have built the house.
2 sg.	Đū hæfst ðæt hūs geworht.	You have built the house.
3 sg.	Hē hæfð ðæt hūs geworht.	He has built the house.
1 pl.	Wē habbað ðæt hūs geworht.	We have built the house.
2 pl.	Gē habbað ðæt hūs geworht.	You have built the house.
3 pl.	Hīe habbað ðæt hūs geworht.	They have built the house.

Preterite indicative construction.

Person and number	Old English	English
1 sg.	Ic hæfde ðæt hūs geworht.	I had built the house.
2 sg.	Đū hæfdest ðæt hūs geworht.	You had built the house.
3 sg.	Hē hæfde ðæt hūs geworht.	He had built the house.
1 pl.	Wē hæfdon ðæt hūs geworht.	We had built the house.
2 pl.	Gē hæfdon ðæt hūs geworht.	You had built the house.
3 pl.	Hīe hæfdon ðæt hūs geworht.	They had built the house.

Explanation: The finite auxiliaries are **hæbbe, hæfst, hæfð, habbað** and **hæfde, hæfdest, hæfdon**, assigned to the labeled persons and numbers. **Đæt hūs** remains the accusative object; **geworht** remains the selected past participle. The present construction presents completed building from a present viewpoint; the past construction places it before a past viewpoint. These are twelve construction positions, not twelve additional synthetic forms. Other grammatical moods or different objects do not supply the requested positions. The unchanged base does not mean that every attested

participle must be uninflected: valid object agreement is distinguished from the finite auxiliary's subject agreement. [3]

F07. Present and past participle bases.

Verb	Present participle	Past participle
gierwan	gierwende	gierwed
sęttan	sęttende	sętt
gewyrcean	gewyrcende	geworht

Explanation: The **past** bases **gierwed, sętt, geworht** enter the selected completed-action construction with **habban**. The present bases in **-ende** do not replace them there. Each pair is nonfinite; it supplies no person ending and does not itself assign a complete participial adjective declension. Preserve the lexical stem change in **gewyrcende/geworht** and the contracted **sętt**. The documented participle variants may be accepted with their correct analysis; a finite preterite in the participle position would change the construction. [5]

A. Tense, sequence and voice

A01. Successive events.

Se mann cōm, and hē geseah ðæt hūs.

The man came, and he saw the house.

Arrival precedes seeing in this ordinary narrative sequence. **Cōm** and **geseah** are third-singular preterite indicatives. Equivalent English past narration is acceptable; neither verb is an infinitive, and the coordination does not state that one event caused the other.

A02. An earlier event in a simple preterite.

Context: The house was finished before the visit.

Se mann geseah ðæt hūs ðe his sunu geworhte.

The man saw the house which his son had built.

Both **geseah** and **geworhte** are morphologically preterite. The context makes the son's building earlier than the man's seeing; English **had built** makes that relation explicit. **His sunu** is the builder, and relative **ðe** represents the house as object of **geworhte**. **Which his son built** is also possible English if the supplied sequence remains clear. Do not call **geworhte** a morphological pluperfect or place the building after the visit. [2]

A03. Present and past viewpoints.
Context: The speaker describes completed building work that they performed.
Ic hæbbe ðæt hūs geworht. — I have built the house.
Ic hæfde ðæt hūs geworht. — I had built the house.
Ic is the subject and builder; **ðæt hūs** is the accusative object. **Hæbbe/ hæfde** is the finite auxiliary; **geworht** is the past participle. The first clause presents completed building from the present; the second places it before a past viewpoint. The participle stays nonfinite in both. Natural contextual English alternatives are acceptable if they preserve the given speaker's agency and the different viewpoints. Neither sentence makes the house the grammatical subject or leaves the builder unnamed. [3]

A04. Possession and completed action.
Ic hæbbe ðæt hūs. — I have the house.
Context for the second sentence: The speaker has just finished building the house.
Ic hæbbe ðæt hūs geworht. — I have built the house.
In the first sentence **habban** expresses possession. In the second it combines with **geworht** to present the speaker's completed building and its present result. **Ðæt hūs** remains accusative in both. Possession alone does not assert that the possessor built the house, and **hæbbe** alone does not mean **build**. A resultative English paraphrase is defensible if it preserves the instructed builder and completion; an unsupported causative interpretation would change the supplied situation.

A05. Active and passive roles.

Old English	Translation
Se mann band ðæt hors.	The man bound the horse.
Ðæt hors wearð bunden.	The horse was bound.
Ðæt hors wæs bunden.	The horse was bound.

In the active clause **se mann** is the nominative subject and **ðæt hors** the accusative object. In both passives **ðæt hors** is nominative subject. The horse is the affected participant throughout; only the active sentence names the binder. Its neuter nominative and accusative spellings happen to coincide.

Wearð commonly foregrounds the binding event; **wæs** commonly presents the resulting state. **Became bound** and **was in a bound state** can make those tendencies explicit, but context also permits event readings with **wesan**. The forms alone do not impose two different English tenses. Do not invent an agent in either passive or keep the active agent as the passive subject. [2]

A06. An intransitive past participle.

Se mann wæs gewiten.

The man had departed; or, the man was gone.

Wæs is finite third-singular preterite **wesan**; **gewiten** is the past participle of intransitive **gewītan**. The man himself has departed. He is not the object of an unnamed agent's transitive action. **Had departed** makes anteriority explicit; **was gone** emphasizes the resulting absence. This recognition example does not require an invented passive agent or establish a general rule for all English **be + participle** expressions. [2]

A07. A present participle in a past setting.

Se mann wæs sittende.

The man sat; or, the man was sitting.

Wæs is the finite third-singular preterite; **sittende** is a present participle. An ongoing situation can make **was sitting** idiomatic English, but the Old English expression does not mechanically require the modern English progressive. **Sat** is a valid simple-past rendering. The name **present participle** identifies the nonfinite form, not the time of the whole sentence; **sittende** is neither a finite present nor a past participle. [2]

A08. Presence simultaneous with a report.
Context: In each sentence the presence is simultaneous with the saying.
Hē sægð ðæt hē sīe hēr. — He says that he is here.
Hē sægde ðæt hē wǣre hēr. — He said that he was here.
Sægð is present indicative; **sægde** is preterite indicative in the main narrative clause. Dependent **sīe** is present subjunctive and **wǣre** preterite subjunctive. The first presence is related to the present saying; the second to the past saying. The second sentence does not, in this context, mean that the presence ended before he spoke. The report's subjunctive does not assert absence or falsity. Equivalent indirect English reports are valid; do not infer **had been** merely from preterite **wǣre**. [2]

A09. Building anterior to a report.
Context: The building precedes the saying.
Hē sægde ðæt hē ðæt hūs geworht hæfde.
He said that he had built the house.
Main-clause **sægde** is the finite preterite indicative. Dependent **hæfde** is the finite preterite subjunctive in the assigned reported-statement analysis; **geworht** is the past participle. **Hē** is the reported builder and **ðæt hūs** the accusative object. The auxiliary–participle construction presents completed building before the past report. **Hæfde** has the same spelling as indicative forms, so its spelling alone does not identify mood. A grammatical alternative order retains the same roles and relation; **geworht** must not be analyzed as another finite verb. [2–3]

A10. Reported intention.
Hē sægde ðæt hē wolde cuman.
He said that he intended to come; or, that he wished/wanted to come.
The intended action is the coming, expressed by infinitive **cuman** with **wolde**. It is prospective from the past saying. The sentence reports the intention without asserting an actual arrival. **Would come** can convey that intention in suitable English context, but does not justify an automatic future-tense analysis. **He came** would assert an event which this sentence leaves open. [2]

A11. Expected arrival and desire.
Context for the first sentence: The visit is still expected.
Hē cymð. — He will come; or, he is coming.
Hē wille cuman. — He wishes/intends to come.
In the first, **cymð** is morphologically present indicative, with future reference supplied by the situation. In the second, **wille** contributes desire or intention and **cuman** names the intended action. **Wants to come** is also apt. English **will** therefore need not be translated with **willan**; conversely, the stated volition in the second sentence should not disappear into a purely mechanical tense label.

C. Controlled composition

C01. We have built the house.
Wē habbað ðæt hūs geworht.
Habbað agrees with first-plural **wē**. The house remains the accusative object and **geworht** the selected past participle. Other grammatical positions of the object and participle preserve the target. Singular **hæbbe** would not agree with **wē**; a simple preterite might be appropriate in another context but would omit the requested present **habban** construction.

C02. They had built the house.
Hīe hæfdon ðæt hūs geworht.
The preterite plural auxiliary **hæfdon** puts the completed building before the supplied past viewpoint. Other grammatical word orders are acceptable. A simple preterite can express an earlier event in context, as A02 shows, but does not meet this task's explicit compound-construction target. Present **habbað** would change the requested viewpoint.

C03. The men and the horse.
Đā męnn bundon ðæt hors. — The men bound the horse.
Đæt hors wearð bunden. — The horse was bound.
The plural active subject requires **bundon**. The passive makes singular **hors** the subject and therefore has singular **wearð**. It leaves the binder unexpressed, so the information that men performed the action is no longer stated. A passive with **wæs** can be grammatical but misses the requested **weorðan** target. Plural **wurdon** would wrongly retain agreement with the former active subject.

C04. The monk's reported presence.
Se munuc sægð ðæt hē sīe hēr.
Se munuc sægde ðæt hē wǣre hēr.
The monk's presence is simultaneous with the saying in each version. **Sīe/wǣre** supplies the requested report subjunctive. An indicative report may be valid Old English in an appropriate presentation, but it does not satisfy that stated choice. Other documented copular subjunctive forms or grammatical word orders are acceptable with the same temporal relation. Do not change simultaneous presence to an earlier **had been** or make **hē** refer to a different person without context.

C05. Building before the report.
Hē sægde ðæt hē ðæt hūs geworht hæfde.
The dependent finite form is preterite subjunctive **hæfde**; the past participle is **geworht**. The completed action precedes the saying. **Hē sægde ðæt hē hæfde ðæt hūs geworht** is an acceptable alternative order. The identical indicative spelling of **hæfde** does not remove the task's specified mood analysis. A passive with the house as subject would change the participant structure. [2–3]

C06. An intention to come.
Hē sægde ðæt hē wolde cuman.
Wolde cuman expresses the intention from the past reporting situation; the infinitive is not an assertion that the coming occurred. Defensible alternative word order is acceptable. Replacing the dependent expression with an asserted past arrival would lose the intended meaning, while translating **wolde** as **intended**, **wished** or **wanted** preserves it.

C07. Preparing food.
Giere ðone męte. — Prepare the food.
Ic hæbbe ðone męte gierwed. — I have prepared the food.
Giere addresses one person. The food is the accusative object in both clauses. In the reply **hæbbe** is finite and **gierwed** the past participle. Documented forms of **gierwan**, correctly analyzed object-agreeing participles and grammatical word-order alternatives can be accepted. Plural **gierwað** does not meet the singular address; a finite preterite substituted for **gierwed** would not complete the compound construction.

C08. The completed bridge and a new arrival.
Sēo brycg wæs geworht. Đā cōm mann.
The bridge is the feminine subject of the first clause; **wæs geworht** presents its completed state without naming a builder. The second clause introduces a man with finite preterite **cōm**. Indefinite English **a** does not require cardinal **ān**. Other grammatical word orders are possible. A suitable passive with **weorðan** can be valid language but misses the specified **wesan** here; a masculine or neuter article with **brycg** would violate agreement.

Cook, Group VI, Exercise 19

19.1. At length the king ceased to bear rule.
Æt nīehstan se cyning geswāc rīces.
Geswāc is the simple preterite of **geswīcan**; **rīces** is the genitive complement, rule or dominion. The supplied **æt nīehstan** gives **at length**. The construction conveys the king's cessation of rule without a separate infinitive meaning **bear**. Equivalent supported wording is possible, but an invented infinitival frame would not follow the taught government.

19.2. He had the kingdom forty years.
Hē hæfde ðæt rīce fēowertig gēara.
Here **hæfde** means possessed or held: it is lexical **habban**, not a perfect auxiliary. **Đæt rīce** is its accusative object. The supplied **fēowertig gēara** expresses the forty-year duration; **gēara** is the genitive plural used with the numeral. Do not add a participle merely because English has **had**, or turn the kingdom into the subject. **He held the kingdom for forty years** gives the same meaning.

19.3. When were the bridges built?
Hwonne wurdon ðā brycga geworht?
Hwonne asks when; **ðā brycga** is the plural subject and **wurdon** the plural preterite auxiliary. The model foregrounds the building event. **Wæron … geworht** can also be defensible when context supports that passive presentation; **wesan** is not restricted to states in every occurrence. The selected bare participle is legitimate with a plural subject. Singular **wearð** would fail to agree, and an active answer with a newly invented builder would add information.

19.4. To-day thou shalt be with me.
Tō-dæg ðū bist mid mē.
The present form **bist** has future reference in this promise; **mid mē** names the accompanying person in the dative. The sentence does not need **willan** simply because the English has **shalt**. **Today you will be with me** is the intended meaning. A translation introducing personal desire or an obligation to be present would add a different modal meaning.

19.5. What (om. did) the Romans build (pret.) in Britain?
Hwæt geworhton Rōmane on Breotone?
Hwæt is the thing built, and **Rōmane** the supplied plural subject. **Geworhton** is the explicitly requested preterite; no separate word translates auxiliary English **did**. The local **on Breotone** supplies the location. A grammatical order with the subject earlier is acceptable. Do not put the question word into the subject role or use a present verb against Cook's **(pret.)** control.

19.6. I send my angel before (beforan, 166) thy face.
Ic sęnde mīnne ęngel beforan ðīnum andwlitan.
Mīnne ęngel is the masculine accusative person sent. **Beforan** takes the taught dative phrase **ðīnum andwlitan** here, with the possessive agreeing with **andwlitan**. The literal reference to the addressee's face is retained. Grammatical word-order alternatives are acceptable; using an accusative after this selected **beforan** frame, or making the angel dative without a new construction, would change the required relations.

19.7. Come (sing.), and bring those letters that you wrote.
Cum, and bring ðā gewritu ðe ðū write.
Cum and **bring** address one person, as Cook expressly requires for **come**. **Ðā gewritu** is the plural object, and **ðe** represents it as object of **write**. The unit's directions also select singular **ðū** in the relative clause: preterite second-singular **write** has short **i**, unlike present first-singular **wrīte**. Cook's unnumbered relative **you** could instead yield grammatical **ðe gē writon** under a plural interpretation, but that does not meet this unit's selected singular target. Do not change the first command to plural or silently read **write** as a present.

19.8. I promise you obedience, if you help (196. d) me.
Ic gehāte ēow gehīersumnesse, gif gē mē helpen.
The model takes both occurrences of **you** as plural: **ēow** is the dative promisee, **gehīersumnesse** the promised thing, and **gē … helpen** the conditional clause. The reference **196. d** selects the subjunctive **helpen**; **mē** is the dative person helped. Singular **ðē/ðū … helpe** is also possible if the addressee is consistently singular. An indicative can occur in other conditional presentations, but does not satisfy this source control. Do not give the recipient the case of the promised thing.

19.9. Send me (om. a) large army.
Sęnd mē micelne hęre.
Sęnd is the singular command selected by the unit's directions; **mē** is the dative recipient and **micelne hęre** the masculine accusative object. Cook's English does not specify the addressee's number, so plural **sęndað** is grammatical under another interpretation, but it misses the unit's singular target. The adjective's **-ne** marks the object's agreement even though **hęre** itself has the same nominative and accusative spelling. Omit an indefinite article as directed; cardinal **ān** is not required.

19.10. I fight with my enemies.
Ic feohte wið mīne fīend.
Feohte is first-singular present indicative. The selected opponent frame uses **wið + accusative**: **mīne fīend**, my enemies. The possessive agrees with the plural noun. This **with** identifies opponents, not companions. Other evidenced government may be valid in its own context but would miss this selected accusative target. The source reading's separately supplied **wið + dative** must not be treated as the only possible construction here.

19.11. Expel your foes.
Ādrīfað ēowre fīend.
The unit's directions select several addressees: plural **ādrīfað** matches possessive **ēowre**. **Fīend** is the accusative plural object. Singular **Ādrīf ðīne fīend** is grammatical for another interpretation of Cook's unnumbered English, but does not meet the unit's plural target. Keep command number and the possessor consistent. A finite indicative substituted for the command, or a possessive that changes the selected addressee, would miss the target.

19.12. The soldiers went home.
Đā cęmpan fōron hām.
Plural **ðā cęmpan** requires preterite plural **fōron**. Directional **hām** means home and needs no preposition. Another taught verb of going can be defensible if it preserves the meaning and reference. Do not use singular **fōr** with the soldiers or turn **hām** into a static location by adding a different construction.

19.13. He will come with (om. a) fleet.
Hē cymð mid sciphęre.
Present **cymð** has future reference in the supplied English context. **Mid sciphęre** expresses accompaniment in the dative; the collective fleet noun does not require a plural simply because it includes several ships. Cook expressly omits **a**. Adding **willan** would introduce volition unless a suitable context justified it, rather than merely supplying a missing future-tense marker.

19.14. Slay (sing.) all that you find (gemētan).
Sleah ealle ðā ðe ðū gemētst.
Sleah is the singular command, with the newly assigned lethal sense. **Ealle ðā ðe** gives all those whom, with the people as object of **slēan** and as the understood relative object of **gemētst**. **Ðū gemētst** retains the singular addressee. A different grammatical word order can preserve these relations. Do not use plural **slēað**, change the victims into finders, or translate the assigned sense merely as a nonlethal strike.

19.15. The harvest is rich in fruits.
Se hærfest is welig on wæstmum.
Welig is the masculine nominative predicate agreeing with **hærfest**. The rich-in frame uses **on + dative**, here plural **wæstmum**. Preserve short **æ** in the checked noun **wæstm**. Equivalent word order is acceptable; changing the phrase to an accusative destination would lose the respect in which the harvest is rich.

19.16. Seedtime and harvest never shall fail (geswīcan).
Sædtīma and hærfest ne geswīcað nǣfre.
The two coordinated subjects take plural **geswīcað**. This assigned intransitive use means cease or fail without an expressed genitive complement. Present tense carries the future reference. **Ne … nǣfre** is one negative-concord expression: **shall never cease**. It is not a pair of negatives canceling each other. Do not add an object simply because **geswīcan** had a genitive complement in 19.1, or treat the promise as an assertion of the seasons' desire.

19.17. The year has four seasons.
Đæt gēar hæfð fēower tīda.
Đæt gēar is the singular subject, with lexical **hæfð** and the accusative quantity **fēower tīda**. **Tīd** has the assigned sense season here. This is possession or inclusion, not a completed-action construction: no participle is needed. **The year contains four seasons** is equivalent English. Do not make the auxiliary plural because its object is plural.

Cook, Group VI, Exercise 20

20.1. The earth is (om. the) Lord's.
Sēo eorðe is dryhtnes.
Dryhtnes is a predicative genitive: the earth belongs to the Lord. It is not an adjective agreeing with feminine **eorðe**. Cook directs omission of the article before Lord, so no separate **the** is inserted there. Another grammatical expression of possession may convey the same idea, but this task practices the newly taught genitive predicate. A dative or nominative replacement would not express that relation.

20.2. The sea saw, and it fled.
Se sǣ geseah, and hē flēah.
The selected **sǣ** is masculine, so **se** and referring **hē** agree with its grammatical gender. English idiom still uses **it**. **Geseah** and **flēah** are third-singular preterites, and this assigned use of seeing has no expressed object. Do not invent something seen or choose a feminine article merely because the sea is not a male person. The personification does not alter the selected declension.

20.3. He shall flee the iron weapon.
Hē flīehð ðæt īserne wǣpen.
The present **flīehð** has future reference. **Đæt īserne wǣpen** is the accusative thing avoided; **īserne** is the weak neuter singular adjective after the article. This use of **flēon** does not require a phrase meaning away from. Keep the adjective, noun and article in agreement. A purely volitional paraphrase would add something to the promised or predicted flight.

20.4. He that (sē ðe) is not (om. the) shepherd, and owns not (127) the sheep, when he sees the wolf, then flees he, and abandons the sheep, and the wolf seizes the sheep.
Sē ðe nis scēaphierde, and nāh ðā scēap, ðonne hē gesiehð ðone wulf, ðonne flīehð hē, and forlætt ðā scēap, and se wulf nimð ðā scēap.
Sē ðe supplies the generic **he who**; **scēaphierde** has no article, as Cook directs. The local **nāh** means owns not; **nis** means is not. The first **ðonne** introduces the circumstance of seeing the wolf, and the second resumes the main action, then he flees. The nonshepherd remains the subject of **forlætt**; **se wulf** becomes the new subject of **nimð**. All four actions—seeing, fleeing, abandoning and seizing—must remain. Do not make the wolf abandon the sheep, omit one of the coordinated clauses, or demand an independently recalled negative paradigm from the supplied **nāh**.

20.5. The day is thine, the night also is thine; thou hast prepared the sun and the moon; thou hast set the borders of the earth; thou hast made summer and winter.
Se dæg is ðīn, sēo niht is ēac ðīn; ðū hæfst ðā sunnan and ðone mōnan gierwed; ðū hæfst ðā gemæru ðære eorðan sętt; ðū hæfst sumer and winter geworht.
The first two clauses use predicative possessive **ðīn**, agreeing respectively with masculine **dæg** and feminine **niht**; their selected surface happens to coincide. The following three clauses use **hæfst** with accusative objects and past participles **gierwed, sętt, geworht**. **Ðære eorðan** depends on **gemæru**, the borders of the earth. Preserve both heavenly bodies, the borders, and both seasons. Correctly evidenced object-agreeing participles can be valid alternatives to these selected bare bases. A simple possessive translation of all five clauses would lose the three completed actions; a participle made to agree in person with **ðū** would confuse two different kinds of agreement. [3]

20.6. Let us build these cities, and make about (ābūtan, 172) them walls, and towers, and gates, while the land is yet (gīet) before us.
Gewyrcen wē ðās ceastra, and gewyrcen ābūtan hīe weallas, and torras, and gatu, ðā-hwīle-ðe ðæt land is gīet beforan ūs.
Both **gewyrcen** forms are first-plural present subjunctives used as exhortations; the second continues the expressed **wē**. **Ðās ceastra** and the walls, towers and gates are accusative objects. **Ābūtan hīe** has the newly taught accusative frame; **beforan ūs** has the taught dative. **Ðā-hwīle-ðe** introduces the simultaneous condition while the land is still before them. Preserve Cook's **gīet**, with length over **i**. Repeating **gewyrcen** keeps both actions within its taught make/build sense. Do not replace it with a familiar verb whose supplied placement frame has not established this around-construction, or use indicative **gewyrcað** for the selected exhortation.

20.7. These nations are more than I; how can I expel them?
Ðās ðēoda sindon mā ðonne ic; hū mæg ic hīe ādrīfan?
Mā is the assigned indeclinable quantity predicate, more in number; it is not an inflected comparative adjective. **Ðonne ic** supplies the comparison with I, and **mæg** takes plain infinitive **ādrīfan**. **Hīe** remains the accusative nations to be expelled. An English paraphrase such as **These nations outnumber me** preserves the numerical point. Inflected **māran** would substitute a different comparative structure, and a finite expulsion verb after **mæg** would fail the modal construction.

20.8. Go to the sea, and cast a fishhook, and take the first (ǣrest) fish, and open (geopenian) his mouth (mūð, 43).
Gā tō ðǣm sǣ, and weorp angel, and nim ðone ǣrestan fisc, and geopena his mūð.
The four singular commands are **gā, weorp, nim, geopena**. **Tō** takes the dative; the course's selected masculine **sǣ** therefore has **ðǣm**, not feminine **ðǣre**. The fishhook is **angel**, distinct from **ęngel**, angel. Cook's bare hint **ǣrest** is realized in the taught weak ordinal **ðone ǣrestan fisc**, the first fish. **His mūð** is the fish's mouth. Grammatical word-order alternatives are acceptable, but do not leave the ordinal uninflected after this article or omit one of the commands.

20.9. Thou wilt find a penny; take that, and give (sęllan) for me and for thee.
Đū gemētst pęning; nim ðone, and sęle for mē and for ðē.
Present **gemētst** carries future reference. **Pęning** is masculine; **ðone** refers back to that penny as the object of **nim**, and the same object is understood with **sęle**. **For mē** and **for ðē** are the assigned beneficiary phrases. Other grammatical object placement can preserve the meaning. Do not replace singular **sęle** with a plural command or introduce **willan** solely because English uses **wilt**.

Cook, Group VI, Exercise 21

21.1. Then said he, She is not dead.
Đā cwæð hē, Hēo nis dēad.
Cwæð reports a past saying, while **Hēo nis dēad** is the speaker's direct present statement. The feminine subject takes the selected predicate **dēad**. **Then he said, "She is not dead"** gives the intended quotation. Do not automatically change the quoted present to a past or turn it into an indirect clause with a different reporting construction.

21.2. Then took he her hand, and said, Maiden, arise.
Đā nōm hē hiere hand, and cwæð, Fæmne, rīs.
Nōm and **cwæð** are past narrative verbs. Possessive **hiere** identifies whose hand he took; the hand is the accusative object. In direct address, **fæmne** is the nominative form of the weak feminine noun, followed by singular command **rīs**. **Then he took her hand and said, "Maiden, arise"** is the meaning. Do not give the addressed maiden an oblique ending or use plural **rīsað** for this one person.

21.3. The stone wall is seven feet broad, and twenty feet high.
Se stānweall is seofon fōta brād, and twēntig fōta hēah.
Brād and **hēah** agree with masculine **stānweall**. Both **seofon fōta** and the supported **twēntig fōta** express extent, using genitive plural **fōta**. The selected root-noun plural **fēt** belongs to other cases and cannot replace **fōta** here merely because English has **feet**. Preserve both measurements and their different dimensions; breadth and height are not interchangeable.

21.4. I took leave of her (acc.), and announced (om. to) her that I never more would visit her.
Ic grētte hīe, and cȳðde hiere ðæt ic hīe nǣfre mā genēosian nolde.
Grētte is past leave-taking with accusative **hīe**. **Cȳðde** has the dative person **hiere** and the following content clause. Within that report, the second **hīe** is the object of **genēosian**. The local **nolde** is the supplied negative preterite subjunctive first singular of **willan**. With **nǣfre mā** it expresses one negative intention: never again to visit her. This is prospective from the past announcement, not an assertion that a visit was completed. Other evidenced negative constructions may be valid, but the supplied route requires no independently recalled negative paradigm. Do not turn the announcement recipient into the visit's subject or make negative concord cancel the refusal. [2, 6]

21.5. The righteous (om. ones) are as bold as (om. a) lion.
Đā rihtwīsan sindon swā bealde swā lēo.
Đā rihtwīsan is the articled weak adjective used for righteous people; no noun translating **ones** is added. Strong predicate **bealde** agrees with that masculine plural. The first **swā** marks degree, and the second introduces the comparison standard **lēo**, supplied as a nominative singular without an indefinite article. The separated **swā … bealde … swā** construction is the target. Singular **beald** would fail agreement; adding a noun for **ones** or an article before **lēo** would disregard Cook's omission controls. Do not replace the supplied lion form by a guessed declension.

21.6. The Britons were cowardly.
Bryttas wǣron earge.
Supplied **Bryttas** is the plural subject; **wǣron** is preterite plural and **earge** the agreeing strong masculine plural predicate. Equivalent word order is acceptable. Singular **wæs**, or a singular adjective used only because English **cowardly** does not visibly change, would fail agreement.

21.7. Come hither, fair maiden.
Cum hider, fægere fæmne.
Cum addresses one person, and **hider** gives movement hither. Direct address takes weak feminine **fægere** with nominative **fæmne**. The phrase means **fair maiden**, not a statement that an independently named maiden is fair. **Come here, fair maiden** is equivalent English. Do not replace the directional adverb with a location adverb without acknowledging the difference, or use a strong adjective ending against the taught address pattern.

21.8. Happy is that people whose God is the Lord.
Ēadig is ðæt folc ðæs God is dryhten.
Ēadig is the strong neuter nominative predicate agreeing with **ðæt folc**. Relative **ðæs** is genitive, whose, because it expresses the possessor of **God** inside the relative clause. Its case is not copied from the nominative antecedent. Predicate **dryhten** identifies God as Lord. Equivalent word order preserves the meaning; making **ðæs** nominative would lose the possessive relation, and a masculine happy-predicate analysis would ignore the noun's grammatical gender.

21.9. Learn of (æt) me, for I am merciful and lowly (ēaðmōd) in heart, and ye shall find (gemētan) rest (ręst, 51. b) (om. unto) your souls.
Leorniað æt mē, for-ðām ic eom mildheort and ēaðmōd on heortan, and gē gemētað ręste ēowrum sāwlum.
Plural **leorniað** takes the taught source/person phrase **æt mē**. Causal **for-ðām** introduces the reason; **on heortan** expresses the respect in which the speaker is lowly. **Gemētað** is present with future reference. **Ręste** is the accusative thing found; **ēowrum sāwlum** is the dative plural beneficiary, with agreeing possessive. Cook directs omission of a separate translation for **unto**. Preserve both merciful and lowly, and do not turn the souls into the direct object or add a future auxiliary merely from English **shall**.

21.10. Now I send you as sheep among (gemang, 172) wolves.
Nū ic sęnde ēow swā scēap gemang wulfas.
Ēow is the plural accusative person sent. The single **swā** introduces a comparison phrase, **as sheep**, with **scēap** referring to those people; it is not the two-token degree construction of 21.5. The selected motion frame **gemang + accusative** gives **wulfas**. Another defensible grammatical order may retain the same relations. Do not treat **swā** as merely **so**, require a finite verb after this nominal comparison, or change the wolves into the people being sent.

21.11. When they pursue (ēhtan) you in this city, flee into (on) (om. an)other.
Đonne hīe ēow ēhtað on ðisse ceastre, flēoð on ōðre.
Đonne introduces the temporal circumstance. The model uses the directly evidenced accusative object **ēow** with **ēhtað**, as the unit directs. Genitive government is also documented and can be valid language, but does not meet this selected accusative target. **On ðisse ceastre** is a dative location. Plural command **flēoð** answers plural **you**; **on ōðre** is the locally supplied accusative destination with **ceastre** understood. Thus **another** means another city. No separate indefinite article is added. Do not treat both **on** phrases as static locations or require the learner to reconstruct the supplied ellipse without its help. [6]

21.12. I take leave of my native land.
Ic grēte mīnne ēðel.
Present first-singular **grēte** contrasts with past **grētte** in 21.4. **Mīnne ēðel** is the masculine accusative native land being saluted in leave-taking. The whole meaning is **I bid farewell to my native land**; the English preposition **of** does not impose an Old English genitive here. Other grammatical word orders are acceptable, but a past verb would change the time and a dative object would change the selected frame.

R. A house and a return

R01. Complete translation.

The man had built one house. Then his son came, and the son saw the house. The father said, “Now I have built the house.” The son said that he intended to travel. When the son departed, the father sat in the house. Then the son came, and he gave his father food.

Interpretation: The opening **hæfde … geworht** places the completed building before the son's first arrival. The direct **ic** belongs to the father; the next reported intention belongs to the son. **Intended/wanted to go** is also a defensible rendering of **wolde faran**. The following clauses separately narrate departure and return, so fulfillment is established by those events rather than by **wolde** alone.

One house preserves the assigned cardinal **ān**; the account has not introduced an indefinite article. Contextual English **was sitting** can render the father's **sæt**, although the Old English word is a simple finite preterite. Preserve the son's return and his gift of food to his father. Making the father the giver to himself, or treating the last arrival as the first one, would break the connected reference and sequence. [8]

R02. The order of events.

1. Building the house.
2. The son's first arrival.
3. The father's announcement.
4. The son's departure.
5. The son's return with food.

The phrase **hæfde … geworht** puts the building before the story's first arrival. Between the announcement and departure the son expresses his intention to travel. A prose description of the same order is equivalent. Do not put building after the announcement merely because the father speaks about it then, or merge the two arrivals.

R03. Speakers, intentions and events.
Ic in the direct quotation is the father. **Hē** in **ðæt hē wolde faran** is the son whose intention is being reported. **Hē** in the last sentence is the returning son, who gives food to his father.
The journey is initially an intention; **se sunu gewāt** then explicitly narrates the departure. The subsequent **cōm se sunu** supplies the return. Thus the narrative shows action beyond the statement of intention, although it gives no detailed account of the intervening travel. Masculine pronoun morphology alone cannot distinguish father from son: the event chain and local subjects identify the referents. Do not infer completed travel solely from **wolde** or make every **hē** refer to the same man regardless of context.

R04. The house as passive subject.
In **Nū hæbbe ic ðæt hūs geworht**, **ic** is the nominative subject and builder; **ðæt hūs** is the accusative object.
Ðæt hūs is geworht. — The house is built.
The new sentence makes **ðæt hūs** nominative subject and leaves the builder unexpressed. Its completed state is conveyed with present **is** and the same past-participle base. **Geworht is ðæt hūs** is a defensible alternative order. The article and noun have identical nominative and accusative spellings, but their grammatical role has changed. Keeping **ic** as the subject of this agentless passive would not perform the requested transformation.

S. The Picts and Scots

S01. Complete translation.

Then two peoples, the Picts from the north and the Scots from the west, began to attack the Britons, take their possessions and plunder; and they afflicted and oppressed them for many years. Then, amid that unrest, the Britons sent messengers to Rome with letters and a tearful petition. They asked the Romans for help and promised them humble obedience and constant submission if the Romans helped them so that they could overcome their enemies. Then the Romans sent them a large army for support; and as soon as the soldiers came onto this island, they fought against their enemies, inflicted great slaughter on them, and drove them out of the Britons' borders and put them to flight. They instructed the Britons to build a fortification for their own protection against their enemies; and so the Romans went home with great victory.

When the former adversaries then realized this, that the Roman army had gone away, they soon came with a fleet into the Britons' territory, struck down and killed all they came across, trampled and destroyed them like ripe crops, and utterly reduced them to misery.

Interpretation: The English names some participants where the Old English uses pronouns: the initial raiders are the Picts and Scots; the petitioners are the Britons; the senders and relieving soldiers are Roman; the final attackers are the former adversaries. Retaining English pronouns is equally acceptable if those relations stay clear. The full sequence includes both the successful relief and the renewed attack after withdrawal.

In opening **and hīe fela gēara iermdon and hīendon**, **hīe** can be accusative, the Britons, with the raiders continuing as subject, or nominative, the raiders, with the Britons understood as object. The surface does not require a unique case analysis; either preserves the same oppression. **Hiera gemærum** in the relief describes the Britons' borders, as Cook's note explains.

Had gone away makes the Roman departure earlier than the enemies' realization; **was gone** can express the same resulting absence. The phrase is intransitive, not passive. **All they came across** allows the breadth of the neuter headless **ðæt** clause; **all whom they encountered** can also make the human victims explicit in context without turning **ðæt** into an overt masculine relative. **Ripe crops**, **ripe corn**, or a suitably understood **ripe field** can convey the comparison. It describes the Britons' devastation, not an unrelated literal harvest.

Closely related words for aid, oppression, submission, fortification and borders are acceptable. Keep both the instruction and its prospective building; do not add an assertion that the fortification was completed. Keep the final **mid ealle**, completely or utterly, and the last reduction to misery. The nineteenth-century ethnological speculation in the original apparatus is archival commentary, not part of this translation or a historical conclusion being tested. [7]

S02. Raid, relief and renewed attack.

1. First raids.
2. Appeal to Rome.
3. Roman relief.
4. Roman withdrawal.
5. Renewed attack.

The former adversaries discover that the Roman army has gone away; they then return by fleet. The narrator thus presents the loss of Roman protection as the opportunity for the renewed attack. Equivalent wording or a labeled timeline is acceptable. The withdrawal precedes its discovery, and the first relief genuinely occurs within the narrative; neither should be omitted or placed after the renewed attack.

S03. Three occurrences of ðā.

Đā ðæt ðā ongēaton ðā ærran gewinnan can be unpacked as **When the former adversaries then realized this**.

Form in order	Function
First **Đā**	Temporal conjunction, when.
Second **ðā**	Temporal adverb, then, within that clause.
Third **ðā**	Nominative plural article with **ærran gewinnan**, the former adversaries.

The first **ðæt** is an anticipatory accusative object of **ongēaton**, this or that. Its content is expanded by the following **ðæt se Rōmanisca hęre …** clause. The later main clause begins **ðā cōmon hīe**, then they came. English may omit an unnecessary **then** while preserving the structure. Do not classify all three **ðā** forms as articles, or confuse the anticipatory object with the following content-clause conjunction. Cook's original note supplies the when–then–the distinction. [7]

S04. Changing subjects.
The **Britons** send messengers to Rome. The **Romans** send the army to the Britons. The **Roman soldiers** arrive and fight the enemies.
The first act is the appeal of the afflicted people. The second is Rome's response. In the arrival and fighting clauses the Roman soldiers supply the contextual subject; Cook's note calls them the legionaries, apparently. His next note identifies the borders from which the enemies are driven as the Britons' borders. Repeated **hīe** does not by itself name a people or guarantee that one subject persists through every clause. **The Romans** or **the Roman authorities** is sufficient for the sending: no particular ruler has to be invented. [7]

S05. Wæs onweg gewiten.
Wæs is third-singular preterite **wesan**, agreeing with **se Rōmanisca hęre**. **Onweg** means away. **Gewiten** is the past participle of intransitive **gewītan**. The army's departure precedes the former enemies' realization that it has left, and their renewed attack follows that realization. **Had gone away** or **was gone** preserves the relation. The army itself has departed; it is not an object on which an unnamed agent has performed a transitive action. Do not analyze the phrase as an agentless passive merely because it contains **wesan** and a past participle, or place the departure after the renewed invasion.

S06. Active Old English and an English passive.
In **Đā onsęndon hīe him micelne hęre**, **hīe**, the Romans, is nominative subject; **him**, the Britons, is the dative recipient; and **micelne hęre** is the accusative army sent.
Then a large army was sent to the Britons by the Romans for their support.
This English passive makes the army the grammatical subject and retains the recipient and the contextually identified agent. **A large army was then sent to them to help them** is also apt when the Roman sender is clear from context. Cook compares an active Old English clause with a passive Latin source; **onsęndon** itself remains active. No Latin analysis or new Old English agent phrase is required. Making the Britons the army being sent would confuse recipient and object. [7]

S07. A prospective instruction.
The Romans recommend that the Britons build a fortification for their own protection against their enemies. The building is **prospective** from the instruction, and this clause alone does not state that the work was completed.
Lǣrdon reports the instruction in the past. Dependent **worhten** is preterite subjunctive in that reporting setting; its morphology does not make the recommended building earlier than the advice. **Instructed/advised them to build** conveys the same relation. Translating it as **they had already built** merely because the dependent form is preterite would reverse the task's temporal meaning. Cook's note about construction in an omitted Latin passage does not turn this Old English advice clause into a narrated completion. [7]

S08. The crop comparison.
The victims are the Britons encountered by the returning attackers. **Rīpe ierðe**, ripe crops, is the supplied collective phrase used in comparing their treatment to a crop trampled down and destroyed. The image intensifies the narrative's account of devastation and vulnerability after the Roman departure.
Ripe corn or an appropriately understood **ripe field** can also convey the image. A broader rendering of the preceding **all they came across** remains possible; the grammatical neuter **ðæt** must not be converted into a uniquely personal relative merely to match an English model. The comparison does not begin a separate literal farming episode or give the noun for crops a newly taught ordinary meaning of people. Making the Romans the victims would disregard their departure and the changed actors. [7]

Source notes

[1] Cook, *Exercises in Old English* (1895), Group VI, Exercises 19–21, printed pp. 9–11; one-based PDF pp. 17–19. All 38 original prompts, controls and section references are retained. In 20.6 the checked hint is **gīet**; in 21.11 the printed adjacency **(om. an)other.** is retained. All answers and explanatory prose are new teaching material.

[2] Cook, *A First Book in Old English*, second edition (1895), §§186–188, printed pp. 101–102; Fulk, *An Introductory Grammar of Old English* (2020), §§45–46 and 48–52, printed pp. 28–29 and 31–33. These distinguish the two inflected tenses, contextual temporal relations, reported presentation, compound constructions and the limits of an automatic modern progressive analysis. The present and past reporting examples retain the task's stated simultaneous, anterior or intended-later relation.

[3] Cook, *First Book*, §188, printed p. 102; Bosworth–Toller, **habban**, main dictionary, entry beginning p. 496b, especially IV–V on p. 497a, and supplement, auxiliary subsection (1)(a–b) on p. 493a. The directly inspected entries distinguish uninflected and object-agreeing participles. The selected active compound pattern does not assign every causative or resultative construction appearing elsewhere in those entries.

[4] Cook, *First Book*, the checked noun patterns on printed pp. 28–38, including §44.2 for the **hęre** alternatives and §46 for the root nouns, with the relevant lexical entries. Complete selected forms are printed in F01–F02. Documented alternatives apply to their identified cells and do not replace the required paradigm with an unrestricted choice of stems.

[5] Cook, *First Book*, the strong and weak verb systems on printed pp. 54–78, with the checked lexical entries; especially §93 for the strong second-singular preterite stem, the contracted strong forms on pp. 58–61, and the weak systems on pp. 68–74. Wright, *Old English Grammar* (1914), §476, printed p. 248 / one-based PDF p. 268, supports the selected dental simplification in **cȳst/cȳð**; **cȳðst** follows the documented analogical retained-dental pattern and remains a valid alternative. This is a rule-based formation, not a claim that these checked pages attest the exact lexical form. These references establish morphology within the defined systems, not every possible use of a displayed cell.

[6] Cook, *First Book*, §139, printed p. 79, supplies negative **nolde** in the indicative and subjunctive systems; 21.4 uses the locally supplied first-singular preterite subjunctive. Bosworth–Toller, **ēhtan**, main p. 244, records both genitive and accusative government and the directly relevant accusative example; **gemang**, main p. 414, records the selected accusative sending-among construction. The separate **swā** comparisons are supported by the main entry on p. 940; numerical predicative **mā** is supported by the main entry on p. 653. These are specific constructions, not general case rules inferred from English prepositions.

[7] Cook, *First Book*, Reader VI, printed p. 145, editorial prose lines 1–7, and p. 146, editorial prose lines 1–11 through **and hīe mid ealle foriermdon.**; one-based PDF

pp. 161–162. The assignment ends before **And hīe ðā eft sęndon**. Its 21 attached notes are p. 145 notes 1–6 and p. 146 notes 1–15. On p. 146, notes 3–5 explain active/passive wording, legionaries and the Britons' borders; notes 10–11 address the omitted Latin construction passage and the three **ðā** forms; note 13 reads **Lat. cædunt** at both anchors; notes 14–15 support the crop phrase and **mid ealle**. Original apparatus and new lexical help remain distinct. The full translation was independently construed from the Old English before comparison with the other editorial witnesses; equivalent interpretations are not restricted to its English wording.

[8] *A house and a return*, all original F/A/C/R/S tasks and the twelve teaching examples are new composition for this course. The account uses the contracted productive vocabulary and constructions; it is not represented as an ancient quotation or as an adaptation of the Picts and Scots passage.

UNIT 13

Answer key

This key covers all 90 tasks: the four complete Cook sets and 38 original exercises. The models, translations and explanations are new teaching material. The twelve translated examples are teaching examples, not additional exercises. Equivalent English wording and defensible Old English alternatives are acceptable. A grammatical answer can nevertheless miss an explicit target, such as object-first order, a particular mood or the selected paradigm. [1]

In a form task, give every labelled cell, including cells whose spellings coincide. In sentence work, preserve the participants, case relations, agreement, clause boundaries and intended reference. Do not identify subjects by first position alone, count a multiword constituent as several constituents, or choose a pronoun's antecedent merely because it is the nearest noun. A masculine Old English pronoun can refer to a masculine noun meaning 'song'.

The local Cook and reading helps remain available. Their supplied forms and phrases are not tests of unaided recall. A complete indicative table does not assign its verb's infinitive, commands or participial constructions; use the separately taught or supplied systems. In translation, ordinary preterites may express a prior event when the context establishes it. Do not insert an auxiliary merely because the English prompt has 'shall', 'was going' or 'had come'.

F. Complete forms

F01. The three kinship nouns.

Mōdor

Case	Singular	Plural
Nominative	mōdor	mōdru
Genitive	mōdor	mōdra
Dative	mēder	mōdrum
Accusative	mōdor	mōdru

Dohtor

Case	Singular	Plural
Nominative	dohtor	dohtor
Genitive	dohtor	dohtra
Dative	dehter	dohtrum
Accusative	dohtor	dohtor

Brōðor

Case	Singular	Plural
Nominative	brōðor	brōðor
Genitive	brōðor	brōðra
Dative	brēðer	brōðrum
Accusative	brōðor	brōðor

Explanation: The selected genitive singular equals the nominative in all three nouns. The dative singular changes the vowel: **mēder, dehter, brēðer**. Before plural **-a, -um**, use the syncopated stems **mōdr-, dohtr-, brōðr-**. The selected nominative/accusative plurals are **mōdru, dohtor, brōðor**. Preserve short **o** in **dohtor**; the long vowels of the other nouns do not establish its quantity. Documented nominative/accusative plural alternatives **mōdra, dohtru/dohtra, brōðru** are valid in those cells. The later genitives **mēder, dehter** are documented variants, but the displayed table gives the requested selection. Extending a mutated dative stem through every plural cell misses the pattern. [2]

F02. Æx and ēagðȳrel.

Æx

Case	Singular	Plural
Nominative	æx	æxa
Genitive	æxe	æxa
Dative	æxe	æxum
Accusative	æxe	æxa

Ēagðȳrel

Case	Singular	Plural
Nominative	ēagðȳrel	ēagðȳrlu
Genitive	ēagðȳrles	ēagðȳrla
Dative	ēagðȳrle	ēagðȳrlum
Accusative	ēagðȳrel	ēagðȳrlu

Explanation: Feminine **æx** keeps **æx-** before its endings; the singular oblique cases take **-e**. Do not import the masculine short-stem **æ/a** alternation. Neuter **ēagðȳrel** keeps the full endingless nominative/accusative singular, but drops the unstressed vowel before an inflectional ending: **ēagðȳrl-es, -e, -u, -a, -um**. The plural **ēagðȳrlu** is not obtained by adding **-u** to the entire singular. Preserve the long **ȳ**. [2]

F03. Three diagnostic patterns.

Noun	Genitive singular	Dative singular	Nominative plural	Genitive plural
cirice	cirican	cirican	cirican	ciricena
mynster	mynstres	mynstre	mynstru	mynstra
wyrttruma	wyrttruman	wyrttruman	wyrttruman	wyrttrumena

Explanation: Cirice follows the weak feminine model, using **ciric-** before **-an** and **-ena**. Its selected ordinary forms remain distinct from the reading's supplied **ciricean** spellings. **Mynster** is the selected syncopating neuter: **mynstr-** before **-es, -e, -u, -a**. **Wyrttruma** follows the weak masculine model: **wyrttrum-** before **-an** and genitive plural **-ena**. A masculine **-as** plural or an unsyncopated selected **mynsteru** would miss the requested models. [2]

F04. Swēte and its comparison forms.

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	swēte	swēte	swētu
Genitive	swētes	swētes	swētre
Dative	swētum	swētum	swētre
Accusative	swētne	swēte	swēte

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	swēte	swētu	swēta
Genitive	swētra	swētra	swētra
Dative	swētum	swētum	swētum
Accusative	swēte	swētu	swēta

Requested form	Answer
Comparative, weak masculine nominative singular	swētra
Superlative, strong masculine nominative singular	swētest
Superlative, weak masculine nominative singular	swētesta

Explanation: Positive **swēte** preserves **-e** in its selected endingless strong cells; the other forms use **swēt-** and the displayed strong endings. Compare neuter singular **swēte** with neuter plural **swētu**. The comparative uses weak inflection only: its masculine nominative singular is **swētra**. The superlative stem is **swētest-**: strong masculine nominative singular **swētest**, weak **swētesta**. Comparison changes the stem; strong or weak selection supplies the appropriate ending. Do not invent a strong comparative paradigm or use weak accusative **swētestan** as a nominative. The full comparative's genitive plural is **swētra**, with the checked consonant simplification, not a mechanically doubled **rr**. [2]

F05. Forceorfan: complete indicative.

Person and number	Present	Preterite
1 sg.	forceorfe	forcearf
2 sg.	forcierfst	forcurfe
3 sg.	forcierfð	forcearf
1–3 pl.	forceorfað	forcurfon

Explanation: The printed principal parts are **forceorfan — forcearf — forcurfon — forcorfen**. The selected present has **ceorf-** except for the second and third singular **cierf-** forms. The preterite first and third singular use **forcearf**; second singular **forcurfe** and all three plural persons use **curf-**, with **-e** and **-on** respectively. The past participle's **corf-** is not the finite plural past stem. The selected **cierf** spelling is a declared rule-based normalization; attested **cirf/cyrf** variants do not justify arbitrary vowel substitutions. The principal parts are supplied diagnostics here, not a new test of independent nonfinite syntax. Cook 23.7's printed reference **134** concerns **munan** in the selected grammar and is inapplicable to this strong III verb; the prompt remains unchanged. [3]

F06. Commands and participle bases.

Person and number	winnan	begān	behealdan
2 sg.	win	begā	beheald
2 pl.	winnað	begāð	behealdað

Verb	Present participle	Past participle
fordilgian	fordilgiende	fordilgod
onlīesan	onlīesende	onlīesed

Explanation: The singular commands address one person; **-að** or the contracted **-ð** pair supplies the plural. **Win** has a single final **n**, whereas **winnað** retains **nn** before the ending. **Beheald** keeps the unmutated present stem. Weak II **fordilgian** has **fordilgiende / fordilgod**; weak I **onlīesan** has **onlīesende / onlīesed**. These are participle bases, not full agreeing adjective tables. Do not substitute an indicative merely because its English translation could sound like a direction. [3]

A. Clause analysis and reference

A01. Case under fronting.
Both clauses mean "The bishop greeted the monk." In each, **se bisceop** is nominative subject, **ðone munuc** accusative direct object and **grētte** the finite preterite. The second clause fronts the complete object phrase without exchanging the participants. **Se/ðone** settle the distinct case roles even though both noun endings here are identical. Translating the second as "The monk greeted the bishop" confuses position with case.

A02. Three functions of ðā.
"When the monk came, the bishop greeted the brothers." The temporal clause is **[Đā se munuc cōm]**: finite **cōm**, subject **se munuc**. The main clause is **[ðā grētte se bisceop ðā brōðor]**: finite **grētte**, subject **se bisceop**, object **ðā brōðor**. The first **ðā** is a temporal conjunction, the second its correlative adverb "then", and the third the plural accusative article in the object phrase. Translating all three as "then" loses both the clause relation and the noun phrase.

A03. A relative inside a main subject.
"The bishop whom the monk greeted sat in the house." Main **sæt** has subject **se bisceop**. Relative **grētte** has subject **se munuc**. The antecedent **bisceop** is nominative as the main-clause subject but the person represented by **ðe** is the relative's direct object. Invariant **ðe** does not display that accusative role by an ending. Do not turn the bishop into the greeter simply because his phrase comes first.

A04. One continued subject.
"The monk greeted the bishop and gave him the food." The monk performs both **grētte** and **sealde**; the second coordinated verb continues the first subject. **Đone bisceop** is the accusative person greeted; **him** is the dative recipient, naturally the bishop; **ðone męte** is the accusative thing given. The sentence does not introduce the bishop as a new giver. As elsewhere, a larger context could clarify an unusual pronoun reference; the ordinary reading here follows the continued action.

A05. A song and a person.
After **Se sang wæs swēte**, the second sentence means "It was pleasant": **hē** refers to the song. After **Se bisceop cōm**, it means "He was in the house": **hē** refers to the bishop. Masculine singular morphology permits either masculine noun in its respective context; lexical meaning and the actual preceding sentence identify the referent. English uses "it" for the song. Neither grammatical gender alone nor the spelling **hē** requires a human referent.

A06. Real ambiguity.
Either the bishop or the monk may be the subject of **Hē sæt on ðǣm hūse**, "He sat in the house." Both are masculine singular, so gender and number do not decide. Explicit alternatives are **Se bisceop sæt on ðǣm hūse.** and **Se munuc sæt on ðǣm hūse.** The task requires both rewrites. Choosing only the nearest noun, or calling one reading impossible without further context, overstates the evidence.

A07. The quotation's persons.
"The monk said, 'I heard the song. Did you hear it?'" **Ic** is the monk, the quoted speaker. **Đū** is the bishop, the singular addressee; **hīerdest** agrees with him. **Hine** is masculine accusative singular referring to **sang**, not to either man. First-singular **hīerde** agrees with **ic**. Changing the question to a plural address or translating **hine** as the monk changes the stated situation.

A08. A report of the speaker's own presence.
"The monk said that he was in the house." The content clause begins at **ðæt** and continues through **wǣre**. Its finite verb is preterite subjunctive **wǣre**, with subject **hē**; the given context identifies that pronoun as the monk himself. The main verb is **sægde**, subject **se munuc**. The report does not assert that someone else was there, and the subjunctive does not by itself imply that the statement was false. "Had been" requires an appropriately prior reading of the context; no automatic English backshift rule decides it.

A09. Restoring agreement.
"The bishop was in the church, and the brothers were in the house." The full second clause is **Đā brōðor wǣron on ðǣm hūse.** The omitted predicate is the corresponding past of "be", restored with plural agreement for **ðā brōðor**. Copying singular **wæs** from the first clause would fail that agreement. A singular earlier predicate can support the understood meaning without supplying the literal plural form unchanged.

A10. Initial phrases and clause boundaries.
First: "The monk sat in the house." **On ðǣm hūse** is a fronted location phrase in the main clause; finite **sæt** has subject **se munuc**. Second: "When the monk sat in the house, the bishop came." The initial temporal clause runs through **sæt**, with **se munuc** as subject; the main clause begins with correlative **ðā**, finite **cōm**, subject **se bisceop**. Its internal **on ðǣm hūse** belongs to the monk's sitting, not the bishop's coming. An initial phrase can be an adjunct or an entire dependent clause, so first position does not identify the actor.

A11. A relative inside a temporal clause.
"When the monk whom the bishop greeted came, the brothers sang." The structure is **[Temporal Đā se munuc [Relative ðe se bisceop grētte] cōm], [Main ðā sungon ðā brōðor].** The subject of **grētte** is **se bisceop**; that of **cōm** is **se munuc**; that of **sungon** is **ðā brōðor**. Relative **ðe** refers to the monk and is the object of greeting. The first **ðā** is a conjunction, the second a correlative adverb, and the last a nominative plural article. The relative remains inside the temporal clause; it does not turn the bishop into the person who came.

A12. Tendencies and explicit targets.
First, words and constituents differ. In **Đone sang hīerde se munuc**, the two-word object phrase is one constituent, and the finite verb is the third written word. Moreover, the checked ***Æfter ðon hē underðēodde*** has a temporal phrase followed by a pronoun subject before the finite verb; even a second-constituent generalization is not compulsory. Second, dependent clauses commonly place their finite verb late, but the supplied exact **ðæt hē ǣrest gehīerde fram ēastsūðdæle heofones** puts **gehīerde** before its source phrase. It means "that he first heard [the sound and song] from the south-eastern part of the sky"; the objects were fronted earlier in the full source sentence. This is a concrete dependent clause with a nonfinal finite verb. The rule describes a tendency, not a universal last-position law. Judge the complete clause and its dependencies, not a mechanical English-to-Old-English rearrangement. Cook 25.7 can still specify an exercise target: the final **bebēode** belongs to the immediately preceding relative. Other grammatical arrangements can be valid language while missing a specified target. The surrounding conditional's **dōð** may precede the following relative or occupy a defensible final position; the nearest-relative interpretation is stated editorially. [4]

C. Controlled composition

C01. Two initial constituents.

1. **Đā brōðor hīerdon ðone sang.**
2. **Ðone sang hīerdon ðā brōðor.**

Explanation: Both models keep **ðā brōðor** nominative plural and **ðone sang** accusative singular. **Hīerdon** remains plural. The first begins with the subject, the second with the complete object phrase. Other valid orders do not replace the two requested arrangements; exchanging the article cases reverses the meaning.

C02. A fronted temporal adverb.

Đā grētte se bisceop ðā brōðor.
Explanation: Initial **ðā** means "then". The target places **grētte** before the nominal subject **se bisceop**; **ðā brōðor** is the accusative object. A subject-first sentence could be grammatical but would miss the expressly requested arrangement.

C03. Temporal correlation.

Đā ðā brōðor cōmon, ðā sang se bisceop.
Explanation: The first **ðā** introduces "when"; **ðā brōðor** is its plural subject and **cōmon** its late finite verb. The next **ðā** is the main-clause correlative, followed by singular **sang** and its subject **se bisceop**. Do not give the brothers the singular past or make the bishop the subject of coming.

C04. A relative object.

Đā brōðor, ðe se bisceop grētte, ēodon tō ðære cirican.
Explanation: The antecedent **ðā brōðor** is the main nominative plural subject of **ēodon**; inside the adjacent relative, **se bisceop** is the subject of singular **grētte**, and **ðe** represents its plural object. The unchanged particle does not copy the main subject's case ending. A relative elsewhere may be intelligible, but this target requires it beside its antecedent.

C05. Explicit reference.

Se bisceop grētte ðone munuc. Đā ēode se munuc tō ðære cirican.
Explanation: The bishop performs the greeting; the monk performs the later movement. Repeating **se munuc** makes the second subject explicit as requested. A bare **hē** might be grammatical in a fuller context but would fail this clarity target. **Đā** here means "then", not "when".

C06. A singular speaker and plural addressees.
Se munuc cwæð: “Ic wille mid ēow sprecan.”
Explanation: Ic refers to the monk and takes **wille**; **ēow** is plural because he addresses several brothers. **Mid ēow sprecan** uses the taught conversation frame and plain infinitive after **willan**. Singular **ðē** would change the specified audience. Keep the words inside the quotation in the speaker’s own person.

C07. Coordination with a continued subject.
Se munuc geseah ðone bisceop and grētte hine.
Explanation: The monk sees and greets; **ðone bisceop** and **hine** are accusative objects referring to the bishop. The coordinated **grētte** continues the single expressed subject **se munuc**. Repeating that subject can be grammatical, but this exercise explicitly asks for one expression of it.

C08. Three nested clauses.
Đā se bisceop, ðe se munuc grētte, cōm, ðā sungon ðā brōðor.
Explanation: The clause map is **[Temporal Đā se bisceop [Relative ðe se munuc grētte] cōm], [Main ðā sungon ðā brōðor].** The monk is subject of **grētte**, the bishop of **cōm**, and the brothers of **sungon**. Relative **ðe** is the object of greeting and refers to the bishop. Preserve the temporal/main correlation and mark all three clauses; identifying only the relative and the main leaves one requested analysis missing.

Cook Group VII. Exercise 22

22.1.
Prompt: Idleness is the mother of sin.
Model: Īdelnes is synne mōdor.
Explanation: Īdelnes is the subject; **mōdor** is the predicate nominative. Genitive **synne** depends on “mother”. Both nouns express general ideas without a compulsory article. The selected nominative **īdelnes** has one final **s**, while its oblique stem has **ss**. Making “sin” the subject reverses the relation.
22.2.
Prompt: Etheldred was (om. the) daughter of the king of the East Anglians.
Model: Æðelðrȳð wæs Eastęngla cyninges dohtor.
Explanation: The supplied nominative name is **Æðelðrȳð**. The nested genitives mean “daughter [of the king [of the East Anglians]]”: **Eastęngla** depends on **cyninges**, and that king phrase depends on predicate **dohtor**. Cook expressly omits the article before “daughter”. Preserve the selected short **o** of **dohtor**; no inflection of the supplied name is tested.

22.3.
Prompt: The bishop's beautiful monastery was destroyed (fordilgian).
Model: Đæt fægere mynster ðæs bisceopes wæs fordilgod.
Explanation: The monastery is the patient of **wæs fordilgod**, a preterite passive, not the agent of destruction. **Mynster** is neuter singular; the overt article **ðæt** licenses weak **fægere**. The following genitive **ðæs bisceopes** identifies the possessor. This uses the already taught article-and-adjective pattern without assuming a general rule after limiting noun genitives. **Fordilgod** is the separately taught past-participle base. Do not translate with an active "destroyed" unless the monastery is wrongly made the destroyer.

22.4.
Prompt: Labor [toil, sing.] with your hands.
Model: Win mid ðīnum handum.
Explanation: Cook specifies a singular addressee: **win**. Possessive **ðīnum** is therefore singular "your", though it agrees with plural dative **handum** after **mid**. **Winnað** would address several people and miss this control. The command's singular **n** differs from the plural stem's **nn**.

22.5.
Prompt: Pursue (sing.) your study.
Model: Begā ðīne leornunge.
Explanation: Begā is the singular command "pursue"; **ðīne leornunge** is its feminine accusative object. The final **-e** belongs to agreement and the noun's oblique system, not to a plural addressee. A form meaning simply "go" would miss the lexical use specified here.

22.6.
Prompt: He goes to church.
Model: Hē gǣð tō cirican.
Explanation: Gǣð is present third singular, agreeing with **hē**. **Tō** takes the dative **cirican** in the selected ordinary weak feminine system. The customary church expression need not add an article. The exact reading's **ciricean** is a separately supplied spelling, not a reason to alter the selected productive table.

22.7.
Prompt: Depart from me, ye that work unrighteousness.
Model: Gewītað fram mē, gē ðe wyrceað unrihtwīsnesse.
Explanation: Gewītað addresses the plural **gē**; **fram mē** has a dative complement. The relative **ðe wyrceað** keeps that plural reference, and **unrihtwīsnesse** is the accusative thing worked or done. The already taught ordinary sense of **wyrcean** covers doing a deed; this is not the distinct new "make four parts" use in 23.4. Singular commands or finite endings would change the audience.

22.8.
Prompt: What is your name?
Model: Hwæt is ðīn nama?
Explanation: Hwæt asks the predicate identity; **ðīn nama** is the masculine nominative subject of **is**. **Nama** remains nominative in a question. The model selects singular "your"; if no external context specifies the audience, a correctly formed plural address is also defensible. English interrogative order does not supply an Old English accusative for "name".

22.9.
Prompt: Tell (hātan) our three friends to go thither to him.
Model: Hāt ūre ðrīe frīend ðider tō him gān.
Explanation: Hāt introduces the taught accusative-person plus infinitive construction. **Ūre ðrīe frīend** is the plural accusative actor of **gān**; **ðider** gives "thither", and **tō him** names the destination person. The model addresses one person; **hātað** is a valid plural command if several people are being addressed, since this prompt does not specify their number. Do not make the three friends the subject of the command itself.

22.10.
Prompt: The song descends from heaven (plur.) to earth.
Model: Se sang āstīhð of heofonum tō eorðan.
Explanation: The singular song takes **āstīhð**. The chapter's selected sense permits "descend"; movement downward is fixed by **of heofonum tō eorðan**, not by changing the verb to an invented form. Cook requests plural heaven, hence dative plural **heofonum** after **of**. **Eorðan** is dative after **tō**.

22.11.
Prompt: I am wont to visit the bishop.
Model: Ic gewunie ðone bisceop genēosian.
Explanation: First-singular **gewunie** governs the plain infinitive **genēosian** in the taught habitual frame, "am accustomed to". The bishop is its accusative object. The present expresses a habit; it does not need a separate copula corresponding word for word to English "am wont". A past **gewunode** would change the tense.

22.12.
Prompt: I wish (willan) first (om. to) ask you (sing.) one thing (156).
Model: Ic wille ærest ðē āscian ānes ðinges.
Explanation: Wille is first singular and takes plain **āscian**, without **tō**. ***Æ*rest** means "first". In the selected asking frame the person **ðē** is accusative and the thing requested is genitive **ānes ðinges**. The spelling **ðē** alone could fit more than one case, but the frame fixes its function here. An accusative "one thing" misses Cook's specified genitive target.

22.13.
Prompt: I wish to take (lǣdan) him with me.
Model: Ic wille hine mid mē lǣdan.
Explanation: Wille takes the newly assigned plain infinitive **lǣdan**. Accusative **hine** is the person taken or led; dative **mē** belongs to **mid**, "with me". The action is taking someone along, not merely receiving or seizing him. Substituting **niman** would miss Cook's lexical control even where another context could make it grammatical.

22.14.
Prompt: The priest prostrated himself before (beforan, 172) the bishop.
Model: Se mæsseprēost āstreahte hine beforan ðone bisceop.
Explanation: The priest is subject of preterite **āstreahte**; accusative **hine** is reflexive through reference to that same subject. The model construes **beforan ðone bisceop** as positioning before the bishop, supported by the checked accusative use. A static **beforan ðǣm bisceope** is a defensible alternative construal. Do not claim that every occurrence of **beforan** requires motion or accusative. [5]

22.15.
Prompt: On the third day the holy soul was released from the body.
Model: On ðone ðriddan dæg wæs sēo hālge sāwol of ðǣm līchaman onlīesed.
Explanation: On ðone ðriddan dæg is the specified time phrase; the ordinal has weak **-an** after the article. **Sēo hālge sāwol** is the feminine patient of **wæs … onlīesed**. The selected weak adjective has the audited syncopated **hālg-** stem. **Of ðǣm līchaman** means "from the body", with dative after **of**. An active finite release verb would require a different subject relation.

Cook Group VII. Exercise 23

23.1.
Prompt: The largest window of the church is two feet (154. c) broad, and four feet high.
Model: Ðæt mǣste ēagðȳrel ðǣre cirican is twēgra fōta brād and fēower fōta hēah.
Explanation: The subject is neuter **ðæt mǣste ēagðȳrel**. Genitive **ðǣre cirican** identifies its church. The measures are genitive **twēgra fōta** and **fēower fōta**, dependent on **brād** and **hēah** respectively. Both adjectives describe the window. Ordinary adjective order can vary; nominative or accusative feet would miss the assigned measure construction.

23.2.
Prompt: Little by little the sweet song drew nigh.
Model: Styccemælum nēalǣcte se swēta sang.
Explanation: Initial **styccemælum** means "little by little"; the finite singular past is **nēalǣcte**, with **ct**, not an assumed **ht**. **Se swēta sang** has weak nominative masculine **swēta** after its article. The fronted adverb does not become a subject, and the pleasant sound's masculine gender does not make it a person.

23.3.
Prompt: I entreat you to tell [that you tell] me what is (194. b) the angel's name.
Model: Ic hālsie ðē ðæt ðū mē sęcge hwæt ðæs ęngles nama sīe.
Explanation: Hālsie takes accusative **ðē** as the person entreated. The request content is **ðæt ðū mē sęcge**: present subjunctive **sęcge**, dative recipient **mē**. Inside it, **hwæt ðæs ęngles nama sīe** is the indirect question, with subjunctive **sīe**. There are two dependent clauses and two different subjects to trace. A pair of detached direct questions would miss the requested construction.

23.4.
Prompt: The soldiers took his raiment, and made (wyrcean) four parts, (om. to) every soldier a part; thus did the soldiers.
Model: Ðā cęmpan nōmon his rēaf and worhton fēower dǣlas, ǣlcum cęmpan ānne dǣl; swā dydon ðā cęmpan.
Explanation: Both **nōmon** and **worhton** have plural subject **ðā cęmpan**. **His rēaf** is what they took; **fēower dǣlas** is what they made. **Ǣlcum cęmpan** is dative recipient, while **ānne dǣl** is the part allotted, without an added preposition for English "to". The final **swā dydon ðā cęmpan** resumes the soldiers explicitly. Singular **worhte** would break agreement.

23.5.
Prompt: The mother of Jesus stood by (wið, 172) the cross.
Model: Ðæs Hǣlendes mōdor stōd wið ðā rōde.
Explanation: Ðæs Hǣlendes depends on nominative **mōdor**; she is the subject of **stōd**. The model's **wið ðā rōde** uses the independently attested static proximity frame with accusative. It means standing beside the cross, not moving towards it. A defensible attested dative construal is not inherently bad language, but the selected model illustrates the assigned accusative frame. [5]

23.6.
Prompt: Many read this writing.
Model: Manige rædað ðis gewrit.
Explanation: Substantival plural **manige**, "many people", takes plural **rædað**. **Ðis gewrit** is neuter singular accusative, "this writing". The number of readers does not make the writing plural. Written English "read" also permits a past interpretation: **Manige rædden ðis gewrit.** A singular "many a person" construal would require corresponding agreement and a different subject pattern; it is not the selected plural construction.

23.7.
Prompt: With his little hatchet he cut down (forceorfan, 134) the tree.
Model: Mid his lȳtlan adesan forcearf hē ðæt trēo.
Explanation: Mid his lȳtlan adesan is a dative instrumental phrase; weak **lȳtlan** agrees with masculine **adesan**. Singular **forcearf** has subject **hē**, and **ðæt trēo** is its accusative object. Cook's numeral **134** is retained, with its inapplicability documented; this is the audited strong III past. Reading the initial hatchet phrase as subject or using plural **forcurfon** changes the construction. [3]

23.8.
Prompt: The ax is placed (āsęttan) into (tō) the root (wyrttruma, 53) of the trees.
Model: Sēo æx is tō ðæra trēowa wyrttruman āsętt.
Explanation: Feminine **sēo æx** is the patient of present passive **is … āsętt**. The locally supplied placement phrase uses **tō** with dative **wyrttruman**, modified by genitive plural **ðæra trēowa**. Ordinary **ðāra** is a valid genitive plural variant. Keep this bounded at/to-root expression; it does not establish that **tō** generally marks static location.

23.9.
Prompt: He took an ax in his hand.
Model: Hē nōm æxe on his hand.
Explanation: Nōm is singular preterite; accusative **æxe** is the axe taken. The supplied **on his hand** construes the result as taking it "into his hand", with accusative **hand**. A static dative **on his handa**, "in his hand", is defensible where that is the intended construal. This model is declared teaching composition, jointly supported by the qualified directional rule and the lexical sense of **niman**; it is not a verbatim source quotation. [5]

23.10.
Prompt: Sell (sęllan) me five hatchets.
Model: Sęle mē fīf adesan.
Explanation: Singular command **sęle** takes dative **mē** as buyer/recipient and accusative plural **fīf adesan** as what is sold. The lexical sense here is "sell", not merely "give". A plural command **sęllað** is possible if several sellers are addressed, since the English prompt leaves the addressee's number open. Do not give the five hatchets a singular noun form.

23.11.
Prompt: His bodily infirmity was very grievous.
Model: His līchamlicu untrymnes wæs swīðe hęfigu.
Explanation: Untrymnes is feminine singular. Attributive **līchamlicu** and predicative **hęfigu** are the selected strong feminine nominative forms; **his** identifies whose infirmity it is. **Swīðe** is the adverb "very". A masculine or neuter adjective ending would not agree with the actual noun. The past copula **wæs** preserves the prompt's time.

23.12.
Prompt: Your companionship is very pleasant.
Model: Đīn gefērscipe is swīðe wynsum.
Explanation: Masculine **gefērscipe** is the subject and **wynsum** its predicate adjective; **swīðe** supplies "very". The model takes "your" as singular **đīn**. Plural possessive **ēower** is defensible for a plural addressee if context requires it. Do not transfer a feminine **-u** from the preceding exercise to this masculine noun.

23.13.
Prompt: Is it any wonder that [though] the faith of God grew (196. e)?
Model: Is hit ǣnig wundor đēah Godes gelēafa wēoxe?
Explanation: The supplied wonder construction has anticipatory **hit**, predicate **ǣnig wundor**, and a **đēah** clause giving the conceded circumstance. **Godes gelēafa** is the subject of preterite subjunctive **wēoxe**. An admitted event may occur in this concessive subjunctive; translating it as necessarily unreal is unwarranted. The literal "though" control prevents replacing the structure merely with an unexamined English "that".

Cook Group VII. Exercise 24

24.1.
Prompt: He that (sē đe) sitteth on the throne shall dwell (wunian) in the midst of them.
Model: Sē đe on đǣm setle sitt, hē wunað tōmiddes him.
Explanation: The initial **sē đe** clause identifies the sitter; **on đǣm setle** is static dative. Resumptive **hē** begins the main predication, with present **wunað** understood prospectively here. **Tōmiddes him** means "in their midst"; the pronoun's dative plural role follows its antecedent "them". The future English does not compel an extra auxiliary. Ordinary short **se** is a taught spelling alternative to the supplied **sē**.

24.2.
Prompt: Angels are spirits without body.
Model: Ęnglas sindon gāstas būtan līchaman.
Explanation: Both **ęnglas** and predicate **gāstas** are nominative plural, linked by plural **sindon**. **Būtan līchaman** uses the taught dative "without body" frame. A singular copula would fail agreement; making "spirits" accusative would misanalyse the predicate. Another taught plural form of "be" can be valid if its ordinary use fits the statement.

24.3.
Prompt: I saw a star (169) fall from heaven unto [until] the earth.
Model: Ic geseah steorran of heofone oð eorðan feallan.
Explanation: Geseah is first-singular past, subject **ic**. Accusative **steorran** is both the object perceived and the actor of the supplied plain infinitive **feallan**. **Of heofone** gives origin; **oð eorðan** gives the endpoint, "as far as/until the earth". The perception construction is already taught; supplying this infinitive does not assign a whole new productive verb system. A finite **fēoll** attached without a suitable clause construction misses the target.

24.4.
Prompt: He that overcometh, the same shall be clothed (gescrȳdan) in white (hwīt) raiment.
Model: Sē ðe oferwinð, se ilca bið mid hwītum rēafe gescrȳd.
Explanation: The relative subject takes **oferwinð**, while **se ilca** resumes "the same one". **Bið ... gescrȳd** is the prospective passive; **mid hwītum rēafe** uses the evidenced clothing frame, with neuter dative agreement. English "in" does not require an Old English **on** phrase. The documented participle **gescrȳdd** is a valid alternative to selected **gescrȳd**. Preserve already taught **bið** without inventing a new quantity. [5]

24.5.
Prompt: These things saith he that is holy.
Model: Ðās ðing cwið sē ðe hālig is.
Explanation: Ðās ðing is the fronted neuter plural object of singular **cwið**. The postposed subject is **sē ðe hālig is**, "he who is holy". Inside that relative, **hālig** is a nominative predicate adjective, not an attributive weak form after **sē**. The sentence does not say that the things themselves speak.

24.6.
Prompt: Fear him (ðone) that is able to destroy (fordōn) both soul and body in (on, 166) hell.
Model: Ondrǣdað ðone ðe mæg fordōn ge sāwle ge līchaman on hęlle.
Explanation: The model gives a plural command **ondrǣdað**; the prompt permits singular **ondrǣd** for one addressee. Accusative **ðone** is the person feared, represented as subject within **ðe mæg fordōn**. The modal takes plain **fordōn**; **ge sāwle ge līchaman** pairs its two accusative objects. **On hęlle** is the supplied locative phrase. Do not insert an independent "may" verb merely because the relative has modal ability.

24.7.
Prompt: I am not worthy (wierðe) that thou enter under (172) my roof.
Model: Ic ne eom wierðe ðæt ðū under mīnne hrōf ingā.
Explanation: Uncontracted **ne eom** is fully supported. **Wierðe** introduces the bounded content frame with present subjunctive **ingā**, subject **ðū**. The entry phrase **under mīnne hrōf** has masculine accusative agreement. This is not a general rule that every adjective takes any subjunctive content clause. A negative-copula contraction is unnecessary, and indicative **ingǣst** would miss the assigned mood. [5]

24.8.
Prompt: Great is your reward in heaven (plur.).
Model: Miclu is ēowru mēd on heofonum.
Explanation: Feminine **mēd** is the nominative subject. Fronted predicate **miclu** and possessive **ēowru** carry the selected short feminine nominative forms; the model uses plural "your". Singular **ðīn** is defensible if the context addresses one person. **On heofonum** retains the requested plural heaven. The fronted adjective does not change the subject's gender.

24.9.
Prompt: If God so clothes (om. the) grass of the field, which (87. b) to-day is, and is (bið) to-morrow sent (āsęndan) into (on, 172) the oven, much (178) more he (om. shall) clothe you, O ye of little faith.
Model: Gif God swā gescrȳt æceres gærs ðæt ðe tō-dæg is and tō-morgen bið on ofen āsęnd, micle mā hē gescrȳt ēow, gē lȳtles gelēafan.
Explanation: The **gif** clause contains the relative **ðæt ðe tō-dæg is and tō-morgen bið … āsęnd**, referring to neuter **gærs**. Cook's **87.b** requests the inflected demonstrative plus **ðe**: **ðæt** is neuter nominative singular as subject within that relative, although its antecedent **gærs** is accusative in the conditional clause. Bare **ðe** is grammatical but misses this stated strategy target. The finite **bið** and bare participle make a prospective passive; accusative **on ofen** marks its destination. The main clause is **micle mā hē gescrȳt ēow**, preserving Cook's omission of an added "shall". Instrumental adverb **micle**, **tō-morgen**, and address **gē lȳtles gelēafan** remain locally supplied. Trace the relative before returning to the main subject; a single unanalysed string of clauses loses that relation.

24.10.
Prompt: Better is the soul than food (męte), and the body than its raiment.
Model: Bętere is sēo sāwol ðonne męte and se līchama ðonne his rēaf.
Explanation: The fronted comparative predicate **bętere** describes **sēo sāwol**. **Ðonne męte** gives the first comparison, and the second coordinate compares **se līchama** with **his rēaf**, with the corresponding "is better" understood. A full second predicate is **is bętera**, with masculine nominative **bętera** agreeing with **līchama**; feminine **bętere** belongs with **sāwol**. Preserve Cook's hooked **męte** and the singular possessive relation in "its raiment"; neither comparison turns its second term into the subject of the first.

24.11.
Prompt: Behold (behealdan) the birds of heaven; your heavenly Father feedeth (fēdan) them.
Model: Behealdað heofones fuglas; ēower heofonlica fæder fēt hīe.
Explanation: The model's plural command **behealdað** corresponds to plural possessive **ēower**; a coherent singular command **beheald** and **ðīn** is defensible if one person is addressed. **Heofones fuglas** is the accusative object of beholding. Singular **ēower heofonlica fæder** is subject of **fēt**, and plural **hīe** refers back to the birds as object. The model chooses weak **heofonlica** after the possessive; strong masculine nominative **heofonlic** is also permitted. Distinguish third-singular **fēt** from a plural finite form.

24.12.
Prompt: What shall (sculon) we eat, or what drink?
Model: Hwæt sculon wē etan oððe hwæt drincan?
Explanation: Sculon agrees with first-plural **wē** and takes plain **etan**; **drincan** shares the understood **sculon wē** in the coordinated question. Each **hwæt** is the interrogative object of its infinitive. Repeating the auxiliary and subject in the second question is grammatical; leaving them understood also preserves the sense. Do not make **drincan** a finite plural merely because the first clause has a plural subject.

Cook Group VII. Exercise 25

25.1.
Prompt: He that (sē ðe) loveth not his brother, whom (87. b) he seeth, how can (mugan) he love God, whom he seeth not?
Model: Sē ðe ne lufað his brōðor, ðone ðe hē gesiehð, hū mæg hē God lufian, ðone ðe hē ne gesiehð?
Explanation: Initial **sē ðe** identifies the person who does not love his brother; the following **ðone ðe hē gesiehð** refers to that brother as object of seeing. The main question is **hū mæg hē God lufian**. Its final **ðone ðe hē ne gesiehð** refers to God, again as the object within the relative. Keep the two negations with their respective clauses and the plain infinitive after **mæg**. Neither the nearest noun alone nor translating every **ðe** identically establishes the full reference map.

25.2.
Prompt: The time of my departure is nigh at hand.
Model: Mīnre forðfōre tīd is nēah.
Explanation: The subject is **tīd**, “time”; **mīnre forðfōre** is the feminine genitive phrase “of my departure”. Predicate **nēah** means “near, at hand”. The model does not require a separate verb corresponding to English “at hand”. A nominative possessive **mīn** inside that genitive phrase would miss its agreement.

25.3.
Prompt: He did something (hwæthwega) of this sort, while his companions were going to town (burg).
Model: Hē dyde hwæthwega swilces, ðā-hwīle-ðe his gefēran tō byrig ēodon.
Explanation: The main clause uses singular **dyde** with **hē**; **hwæthwega swilces** is the supplied "something of this kind". **Ðā-hwīle-ðe** introduces the simultaneous circumstance, with plural subject **his gefēran** and **ēodon**. The selected weak noun here is "companions". **Tō byrig** uses the irregular dative of **burg**. Ordinary **ēodon** can render "were going"; a progressive auxiliary is not required.

25.4.
Prompt: Be with the brethren.
Model: Wes mid ðǣm brōðrum.
Explanation: Wes is the singular command "be"; **mid ðǣm brōðrum** names the company in the dative plural. The prompt leaves addressee number unspecified, so a correctly taught plural command is valid if several people are addressed. The model does not turn "be with" into a new prefixed verb.

25.5.
Prompt: Open the windows of the house.
Model: Geopena ðæs hūses ēagðȳrlu.
Explanation: The model selects singular **geopena**. **Ēagðȳrlu** is the selected neuter accusative plural, with genitive **ðæs hūses** identifying the house. A coherent plural command **geopeniað** is also valid if several addressees are meant. Preserve the noun's syncopated plural rather than adding an ending to the complete singular.

25.6.
Prompt: Love (plur.) your enemies, do (om. to) them well that hate you, that ye (om. may) be (196. f) children of your Father, which (87. b) is in heaven (plur.).
Model: Lufiað ēowre fīend, dōð ðǣm wel ðe ēow hatiað, ðæt gē bēon ēowres Fæder bearn, sē ðe on heofonum is.
Explanation: Cook expressly requires plural commands **lufiað, dōð**. **Ēowre fīend** is accusative object; **ðǣm … ðe ēow hatiað** is the dative group to whom good is done. Purpose **ðæt gē bēon … bearn** takes the taught subjunctive without an inserted modal. **Ēowres Fæder** is genitive with predicate **bearn**; **sē ðe on heofonum is** refers to the Father, not the children. Keep plural heaven and distinguish the dative recipients from the direct object of "hate".

25.7.
Prompt: Ye are my friends, if ye do (ind.) the things which (87. d) I command (bebēodan) you (verb last).
Model: Gē sindon mīne frīend gif gē ðā ðing dōð ðe ic ēow bebēode.
Explanation: Sindon and conditional indicative **dōð** agree with **gē**. **Mīne frīend** is the predicate nominative; **ðā ðing** is the object of doing. The relative **ðe ic ēow bebēode** has subject **ic**, dative recipient **ēow**, and the things as its understood object. We read Cook's final-verb instruction as applying to the nearest named verb, **bebēode**, which is last in that relative. A defensible alternative places the entire relative beside **ðing** and leaves **dōð** last in its conditional. Do not reject either grammatical arrangement merely for not matching the model; retain the indicative and the stated relative-final target.

25.8.
Prompt: The birds sang the sweetest song, winsome (acc.) to hear.
Model: Ðā fuglas sungon ðone swētestan sang, wynsumne tō hīeranne.
Explanation: Plural **ðā fuglas** takes strong past **sungon**. Its accusative object is **ðone swētestan sang**; **wynsumne** is the explicitly requested accusative masculine adjective agreeing with that song. **Tō hīeranne** is the taught inflected-infinitive frame, "to hear". Nominative **wynsum** would miss Cook's agreement control, even if an independently recast sentence could use it.

25.9.
Prompt: The roof of the church is very high.
Model: Ðære cirican hrōf is swīðe hēah.
Explanation: Ðære cirican is a fronted genitive modifier within the subject phrase **ðære cirican hrōf**; the roof remains masculine nominative subject of **is**. Predicate **hēah** agrees with it and **swīðe** means "very". Do not treat the initial church phrase as the subject or use a weak adjective merely because a genitive precedes the noun.

25.10.
Prompt: There (ðā) was suddenly with the angel (om. a) multitude [number] of the heavenly host, praising (gen. plur.; cf. 189. 2) God, and thus saying.
Model: Đā wæs sęmninga mid ðǣm ęngle getæl heofonlices weorodes, hęriendra God and ðus cweðendra.
Explanation: Cook supplies temporal/presentational **ðā**, not a new obligatory expletive corresponding to English "there". Singular **getæl** is subject of **wæs**; **mid ðǣm ęngle** has the required dative. The local collective formula supplies **heofonlices weorodes** and substantive genitive plurals **hęriendra … cweðendra**, "of people praising … and saying". Preserve their genitive plural control instead of changing them to nominatives to agree mechanically with singular **getæl**. Their complete participial paradigm is not a recall target.

25.11.
Prompt: To God be (193) glory (wuldor) in (om. the) heights, and on earth peace (om. to) men of good will.
Model: Gode sīe wuldor on hēanessum and on eorðan sibb mannum gōdes willan.
Explanation: This is the supplied wish formula: dative recipient **Gode**, optative **sīe**, nominative **wuldor**. The coordinate wish has nominative **sibb** with **sīe** understood; **mannum** is dative without a separate **tō**, and **gōdes willan** is the bounded quality expression "of good will". **On hēanessum** and **on eorðan** supply the two locations. Adding articles that Cook explicitly omits misses its control; treating **Gode** as a nominative subject changes the construction.

25.12.
Prompt: He returned (ęfthweorfan) (om. by) the same way that he had come (see ǣr, adv.).
Model: Hē ęfthwearf ðȳ ilcan wege ðe hē ǣr cōm.
Explanation: Singular **ęfthwearf** means "returned". **Ðȳ ilcan wege** is the taught route expression, "by the same way", without an additional preposition. The relative **ðe hē ǣr cōm** establishes the earlier coming through **ǣr** and context. Plain preterite **cōm** therefore renders English "had come" without an obligatory compound pluperfect. The pronoun remains the person who returned; the reading later uses a similar route expression for the song.

R. The bishop and the monk

R01. Complete translation.
The bishop sat in the house, and the monk was there. When the monk heard the song, he went to the bishop. The monk said, "I heard the song, which was very pleasant. Did you hear it?" The bishop said, "Go now, and bring the brothers here." Then the monk went to the church and came back with the brothers. The bishop saw them and said, "You are my friends. I want to speak with you." The monk sat with the brothers, and they heard the bishop's words.
Target and alternatives: Preserve the complete sequence, both speeches, the question and the command. "Lead the brothers here" is a valid literal rendering of **lǣd**; "words/speech" can render the final collective sense of **word**. The account does not give an explicit answer to the monk's question, so "Yes, I heard it" must not be added. It is new teaching material, not an extra historical episode in Chad's life.

R02. Reference across the account.
In **ðā ēode hē**, **hē** is the monk. **Hine** in the monk's question refers to masculine **sang**, so English uses "it". In **geseah hīe**, the natural reference is the returned group, the monk and brothers. The final quotation's **Ic** is the bishop, its speaker; **ēow** naturally addresses that group. A narrower reference of **hīe** or **ēow** to the brothers is also defensible: the wording does not force the exact membership of either plural group. Morphological gender and number constrain the reading, while context identifies the participants. Neither **hine** nor masculine **hē** must refer to a man merely by form.

R03. Clauses and continued subjects.
The temporal clause is **[Đā se munuc ðone sang hīerde]**, finite **hīerde**, subject **se munuc**. Its main clause is **[ðā ēode hē tō ðǣm bisceope]**, finite **ēode**, subject **hē**, the monk. The relative is **[ðe swīðe wynsum wæs]**, finite **wæs**; **ðe** represents its subject, the antecedent **sang**.
One suitable coordination is **Đā ēode se munuc tō ðære cirican, and cōm ęft mid ðǣm brōðrum**: **ēode** and **cōm** share **se munuc**. Another is **Se bisceop geseah hīe and cwæð**: **geseah** and **cwæð** share **se bisceop**. Give at least one actual pair and recover its subject. Do not carry that subject across a later explicitly different noun merely because another **and** occurs.

R04. Sequence and final company.
The sequence is: the monk hears the song; he asks whether the bishop heard it; the bishop commands him to fetch the brothers; the monk returns with them; the bishop addresses the assembled group. The bishop, monk and brothers are present at the end. **Cōm ęft mid ðæm brōðrum** brings the group back; **Se bisceop geseah hīe and cwæð** places the bishop with them; **Se munuc sæt mid ðæm brōðrum** explicitly seats the monk among the brothers. The final **hīe hīerdon ðæs bisceopes word** presents the group listening. The text does not supply a number for these brothers or identify them as Chad's seven.

S. The Passing of Chad

S01. Complete supported translation.

When, one day, he was doing something of this sort outside, and his companions were going to the town, to church, as they often did, and the bishop was alone in the oratory, occupied either in reading or in prayer, he suddenly heard—as he said afterwards—the sweetest and most beautiful sound of people singing and rejoicing descending from heaven to earth. He said that he first heard that sound and that song from the south-eastern part of the sky, that is, from the height of the winter sunrise; and from there they approached him little by little, until it reached the roof of the oratory in which the bishop was, and, entering, filled the whole place and surrounded it on all sides. He then directed his attention earnestly to what he heard. Then, after about half an hour, he heard the same song of joy rise from the roof of that same oratory and return upwards to heaven with indescribable sweetness, by the same way by which it had come before.

He remained there for some time, wondering and marvelling; with an attentive mind he thought and considered what those things might mean. Then the bishop opened the window of the oratory and made a sign with his hand, as was his custom if anyone was outside, that he should come in to him. He immediately went in to him. He—the bishop—said to him: "Go quickly to the church and tell our seven brothers to come here to me; and you too be present with us."

Target and alternatives: Preserve all actions, the sound's full route, the interval, the signal and the final summons. "His companions went/had gone" is a defensible contextual rendering of **ēodon**; the Old English preterite does not alone distinguish those English aspects. "Voice" can render **stefne**. The plural sound-and-song description gives way to singular

masculine **sang**, naturally English "it". "The whole place" makes the supplied singular **eall** explicit; "filled everything there" is also defensible. The interpretive **hwæt … bēon sceolden** may be rendered "what these things could signify/were to mean", without an obligatory assertion of future obligation. **Mid wes** permits "you too be there/be present"; "with us" makes its implied company explicit. The scene's first listener is Owini, not the bishop. The communal church differs from the bishop's local oratory. Do not add the brothers' arrival, the exhortation or Chad's death: they lie beyond the assigned endpoint. [6]

S02. The long opening sentence.

The major structure is **[When he one day was doing something of this kind outside, and his companions were going to town, to church [as they often did], and the bishop alone in the oratory was occupied either in reading or prayer], [then he suddenly heard [as he afterwards said] the sweetest and most beautiful sound … descend from heaven to earth].** The subordinate comparisons and parenthetical reporting interrupt a simple linear sequence.

The subjects are: **dyde — hē**, Owini; **ēodon — his gefēran**, the companions; **dydon — hīe**, the companions; **wæs — se bisceop**, Chad; main **gehīerde — hē**, Owini; parenthetical **sægde — hē**, also Owini. The first **Đā** introduces the temporal setting, the second **ðā** is an internal temporal adverb "then", and the **ðā** immediately before **gehīerde** resumes the main hearing event. The further **ðā** before **swētestan stefne** is an accusative feminine article, not another clause marker. **Āstīgan** is an infinitive whose understood actor is the accusative sound; it is not another finite past verb. Do not make the nearby bishop the subject of hearing merely because his name occurs last.

S03. The sound's path.

Both **hē becōm** and **ðe hē ǣr cōm** refer to the masculine song; Cook's note 152.9a explicitly says **Se sang**. It descends from heaven to earth, is first heard from the south-eastern sky at the height of the winter sunrise, approaches little by little, reaches the oratory's roof, enters, fills and surrounds the place, and later rises from that same roof and returns upwards to heaven by the same route. The opening plural **nēalǣcton** treats the sound and song together; the later singular pronoun picks up **sang**. English "it" is appropriate. Saying that Owini flies to the roof or heaven confuses grammatical gender with human reference.

S04. Owini and Chad.
Owini hears and reports the sound, directs his attention to it, hears its ascent and return, remains wondering and marvelling, thinks about its meaning, and enters when signalled. Chad is alone in the oratory, opens its window, makes the customary hand signal, and tells Owini to fetch the brothers. The exact **Cwæð hē, se bisceop, him tō** makes the quoted speaker explicit: appositive **se bisceop** identifies **hē** as Chad. Here **him** is Owini, the addressee; the earlier **hē** of hearing is Owini, while the intervening motion pronouns can refer to the song. Grouping every masculine pronoun under one actor would destroy these distinctions.

S05. The stranded preposition.
The whole phrase is "to the roof of the oratory in which the bishop was": **tō ðæcean ðære ciricean ðe se bisceop in wæs**. The antecedent of **ðe** is the oratory/church, **ciricean**, not the roof. Cook note 152.11 says that **ðe** is governed by **in**, although that preposition stands later in the relative. **Se bisceop** is its nominative subject and **wæs** its finite verb. The particle's unchanged spelling does not exhibit a dative ending; the prepositional relationship supplies the function. The roof is the endpoint of the song's arrival, while the bishop is inside the oratory.

S06. Fronting from the content clause.
The two fronted accusatives are **ðā stefne** and **ðone sang**. Their governing verb is embedded **gehīerde**, as Cook note 152.8 states. **Hē cwæð** is the reporting clause; **ðæt hē ærest gehīerde …** is its content. A useful map is **[Fronted objects: ðā stefne and ðone sang] [Report: hē cwæð [Content: ðæt hē ærest gehīerde ___ fram ēastsūðdæle heofones …]].** The gap notation is explanatory, not an addition to the source.
The meaning is "He said that he first heard that sound and song …", not "He spoke that sound and song". In the dependent clause, finite **gehīerde** precedes the source phrase **fram ēastsūðdæle heofones**; the actual source therefore also supplies a concrete example of a dependent verb that is not last. Do not erase this order to fit a universal rule.

S07. The summons.
Chad is the speaker and Owini the singular addressee. **Ūre** is the inclusive communal "our", referring to their brotherhood; **mē** points to Chad, the speaking bishop; **ðū** singles out Owini. The command is to have **ūre seofon brōðor**, "our seven brothers", come **hider tō mē**, here to the bishop. **And ðū ēac swilce mid wes** explicitly includes Owini as well; it does not send him away from the gathering.
The fetch command **Gang hraðe tō ciricean** directs Owini to the communal church. Cook note 152.5 distinguishes that church, where the companions have gone, from the oratory in which Chad is waiting. The exact source's church spellings are supported forms, not a request to reconstruct an unassigned proper-name or dialect paradigm.

S08. Two actual clause orders.
One suitable main clause is **Đā ontȳnde se bisceop ðæt ēagðȳrel ðære ciricean**. Its first constituent is adverb **ðā**; finite **ontȳnde** follows, then subject **se bisceop** and the complete window object phrase. This illustrates the common fronted-constituent plus finite-verb pattern.
One suitable dependent clause is **gif hwilc mann ūte wære**. Its introductory conjunction is **gif**, its first following constituent the subject phrase **hwilc mann**, its finite verb **wære**; that verb is late, after adverb **ūte**. Other correctly identified clauses are acceptable. For example, **ðæt hē ærest gehīerde fram ēastsūðdæle heofones** has introductory **ðæt**, subject **hē**, adverb **ærest**, finite **gehīerde**, then the source phrase; it demonstrates a permitted nonfinal dependent verb. Distinguish a clause introducer from the constituents following it. Preserve the source wording and justify the actual relation to a tendency; do not manufacture a compulsory pattern.

Source and editorial notes

[1] Cook, *Exercises in Old English* (1895), Group VII, printed pp. 11–13, one-based PDF pp. 19–21. Original prompts are preserved; all answer models are new teaching material. "Omit" directions and bracketed controls belong to the original prompts. No model string is the sole test of valid Old English.

[2] The nominal systems follow the selected Cook lexemes and the complete declension rules documented in the learner chapter. Kinship and syncopating forms require their stated exceptions. Comparative **swētra** follows the weak system and the consonant simplification checked in Wright §259.3. Forms derived from those rules are distinguished from individual lexical attestations.

[3] Cook's selected strong and weak verb rules, lexical entries and the chapter's separately assigned command, infinitive and participle systems. For **forceorfan**,

consult the strong III framework and checked lexical evidence; original reference **134** points to **munan** in this edition. Its cause is unproved. Preserve the prompt and the documented correction rather than silently changing its numeral.

[4] Fulk, *An Introductory Grammar of Old English*, §78, qualifies main- and dependent-clause ordering descriptions. Cook's exact ***Æfter ðon hē underðēodde*** is on printed p. 153, editorial line 16 after the printed line-15 marker. It is a separately supplied fragment, outside the assigned continuous reading.

[5] The dictionary evidence for **beforan** positioning, **under** roof entry, static **wið** plus accusative, and **gescrȳdan** with **mid** plus dative is distinct from the morphology of those nouns and verbs. Cook §172.1 and the **niman** entry, printed p. 307, jointly support the bounded declared composition in 23.9; they do not attest that whole sentence as a quotation. **Tō-morgen** is supplied from Wright, printed p. 294, one-based PDF p. 314.

[6] Cook, *A First Book in Old English*, second edition (1895), printed 152.3–153.9 partial, one-based PDF pp. 168–169. Only multiples of five are printed marginal line numbers; intervening line positions are editorial counts. The reading ends at **and ðū ēac swilce mid wes.** Notes 152.5, 152.8, 152.9a, 152.11 and 152.12 establish respectively the church/oratory distinction, the embedded accusatives, the song reference, the stranded preposition and singular **eall**. All 24 original notes remain in the learner chapter. The preceding context is supplied in English; the following exhortation and death are unassigned.

Original apparatus questions are retained as source notes, not added graded tasks. The key answers every assigned learner task, including the two complete readings; supplied etymological questions do not create additional recall requirements.

UNIT 14

Answer key

This key covers all 44 tasks: 23 original exercises and the two complete Cook sets. The models, translations and explanations are new teaching material. The four translated teaching examples are not additional exercises. Equivalent English wording and defensible Old English alternatives are acceptable. Judge a stated vocabulary, form or word-order target separately from grammatical validity. [1]

In form tasks, give every labelled cell even when several cells have the same spelling. In composition, preserve the participants, case relations, number, mood and intended meaning. A prefix belongs to a particular lexical item; it does not supply a universal English meaning or make its verb interchangeable with the unprefixed verb. Supplied words and phrases remain available throughout the tasks and are not tests of unaided recall.

F. Complete forms

F01. Wǣdla and ēage.

Wǣdla, poor man, is weak masculine.

Case	Singular	Plural
Nominative	wǣdla	wǣdlan
Genitive	wǣdlan	wǣdlena
Dative	wǣdlan	wǣdlum
Accusative	wǣdlan	wǣdlan

Ēage, eye, is weak neuter.

Case	Singular	Plural
Nominative	ēage	ēagan
Genitive	ēagan	ēagena
Dative	ēagan	ēagum
Accusative	ēage	ēagan

The masculine distinguishes nominative singular **-a** from accusative singular **-an**. The neuter has **-e** in both singular nominative and accusative. In wǣdla, **-an** can mark singular genitive, dative or accusative, or plural nominative or accusative. In ēage, it can mark singular genitive or dative, or plural nominative or accusative. Context supplies the distinction; -an alone does not mean “plural” or “object”. The documented genitive plural **ēagna** is also valid. Do not extend either the masculine -a or its accusative -an into the neuter's singular direct cases. [2]

F02. Compound nouns.

Case	Singular	Plural
Nominative	goldhord	goldhord
Genitive	goldhordes	goldhorda
Dative	goldhorde	goldhordum
Accusative	goldhord	goldhord

The other two dative singulars are **wyrtgemange** and **gōdwębbe**. Attach the ending to the whole compound: **goldhord-e, wyrtgemang-e, gōdwębb-e**. The first element does not receive a separate case ending inside the compound. The heavy neuter goldhord has no -u in its nominative/accusative plural; context distinguishes those forms from the singular. Preserve the long ō in gōdwębb. These are inflected forms of the same nouns, not new lexical derivatives. [2]

F03. Liccian.

Person and number	Present indicative	Preterite indicative
1 sg.	liccie	liccode
2 sg.	liccast	liccodest
3 sg.	liccað	liccode
1–3 pl.	licciað	liccodon

The selected weak-II pattern has **licci-** in the first singular and all plural present forms, but **licc-** before second-singular -ast and third-singular -að. The preterite has **liccod-** before -e, -est and -on. Both c letters remain. A plural subject needs licciað or liccodon, even though the three persons within either plural tense coincide. Do not form a strong preterite by changing the root vowel. [3]

F04. Selected indicative forms.

Verb and requested cell	Form
gewęndan, present 2 singular	gewęntst
gelīefan, present 3 singular	gelīefð
forgiefan, present 3 singular	forgiefð
āhrēosan, preterite 3 plural	āhruron
gebiddan, present 3 singular	gebitt
ætīewan, preterite 3 plural	ætīewdon
āhębban, present 3 singular	āhęfð
onfōn, preterite 2 singular	onfēnge

Āhruron uses the strong-II preterite plural stem **āhrur-**, including its s/r alternation. It is not made by adding -on to the present stem āhrēos-. **Onfēnge** uses **onfēng-** plus second-singular -e. A strong preterite second singular belongs with the preterite plural stem, even though its number is singular. The attested prefixes remain part of both verbs. [3]

Keep the diagnostic changes in the other cells: gewęnd- gives **gewęntst**; gebidd- gives **gebitt**; āhębb- gives **āhęfð**. ***Ætīewdon*** belongs to the weak-I verb “show”; the earlier weak-II verb “appear” has a different system. Long īe in gelīefð does not license adding a length mark to forgiefð.

F05. Subjunctives.

Person and number	Present subjunctive	Preterite subjunctive
1 sg.	gebidde	gebǣde
2 sg.	gebidde	gebǣde
3 sg.	gebidde	gebǣde
1–3 pl.	gebidden	gebǣden

Additional requested cell	Form
forweorðan, present subjunctive 3 singular	forweorðe
sęndan, present subjunctive 2 singular	sęnde
gelīefan, present subjunctive 3 plural	gelīefen
ārīsan, present subjunctive 3 singular	ārīse

All persons share the singular form, and all persons share the plural form. The subjunctive has no distinct second-singular -st. **Gebǣde/gebǣden** use the strong preterite plural stem with long æ; the present keeps **gebidd-**. The spelling sęnde can also occur elsewhere in the verb's system: its label and clause determine which cell is intended. This task asks for forms; mood choice in a sentence must still follow that sentence's construction. [3]

F06. Participles and commands.

Verb	Present participle base	Past participle base
forceorfan	forceorfende	forcorfen
weorpan	weorpende	worpen
gemētan	gemētende	gemētt
geglęngan	geglęngende	geglęnged

Person and number	gemiltsian	tilian
2 sg.	gemiltsa	tila
2 pl.	gemiltsiað	tiliað

The present bases use -ende with the present stem; the strong past bases use the fourth stem. Thus forceorf- gives **forcorfen**, and weorp- gives **worpen**. The weak bases retain their own dental formation, including **gemētt**. **Geworpen** is a documented alternative to bare worpen. Do not add another ge- to gemētt or geglęnged merely because a form is a participle. [3] The commands have singular -a and plural -iað. Preserve **ts** in gemiltsian and the single **l** in tilian. The participle task requests bases, not full attributive adjective declensions or new finite tenses.

A. Word families and analysis

A01. Compounds and endings.

Expression	Components and head	Inflection and meaning
goldhord	gold + hord; final head hord	The citation has no overt ending: treasure, a hoard of gold.
heofonfȳre	heofon + fȳr; final head fȳr	-e is dative singular: fire from heaven, here destructive heavenly fire/lightning.
hēaclifum	hēa- + clif; final head clif	-um is dative plural: high cliffs.

The first element specifies the final noun's content, source or quality. In hēaclifum, **hēa-** is the attested combining form related to hēah. The visible relationship does not make dropping h a general rule for new words. Components help explain an attested word; lexical use still determines its exact meaning. The noun citations hord and clif and the two source forms remain supplied. Do not treat -e or -um as part of the lexical compound, or infer a complete new declension from either source token. [4]

A02. Derived nouns.

Family	Formation	Parts of speech and meanings
leornian / leornung	leorn- + -ung	Verb “learn”; feminine noun “learning, study”.
gefēra / gefērscipe	gefēr- + -scipe	Noun “companion”; masculine noun “companionship”.
rihtwīs / rihtwīsnes	rihtwīs + -nes	Adjective “righteous”; feminine noun “righteousness”.
īdel / īdelnes	īdel + -nes	Adjective “empty, void”; feminine noun “idleness”.

The weak-noun citation ending -a of gefēra is not retained before -scipe. Each result is a lexical noun with its own gender, sense and inflection. **Īdelnes** has the taught sense “idleness”; mechanically translating the earlier adjective sense plus an English suffix as “emptiness” misses that lexical choice. “Indolence” is a suitable equivalent. These examples establish attested family relationships, not a method for inventing an unrestricted set of nouns. [4]

A03. Adjectives and adverbs.
Heofon, heaven/sky, is a noun; **-lic** forms the adjective **heofonlic**, heavenly. **Swīð**, strong, is an adjective citation; **swīðe**, very, is an adverb with -e. **Sōð**, true, is an adjective citation; **sōðlice**, truly/indeed, is an adverb with -lice. The adverbs do not agree with a noun. Swīðe's selected meaning is “very”, not a mechanically substituted “strong”.
A final e alone proves nothing about word class: it can also be a nominal or adjectival case ending. The whole word, its lexical entry and its function settle the analysis. The supplied swīð and sōð citations do not introduce complete adjective paradigms. [4]

A04. Prefixes and whole-word meanings.
Un- marks opposition in **rihtwīsnes / unrihtwīsnes**, righteousness/unrighteousness. **Tō-** contributes the attested “asunder” relationship in **berstan / tōberstan**, burst/break up or go to pieces. **For-** belongs to **forweorðan**, perish, beside **weorðan**, become. “Perish” cannot be recovered by translating the prefix as the English preposition “for”.
The whole word's meaning and government must be learned. Prefixes have different functions in different words; these pairs neither prove that another imagined compound exists nor permit replacing every prefixed verb with its base. The four verb citations are supplied for analysis. No additional syntactic infinitive use is being tested. [4]

A05. Derivation and inflection.
Rihtwīs → rihtwīsnes is derivation: -nes forms the noun “righteousness” from the adjective “righteous”. **Rihtwīsnes → rihtwīsnesse** is inflection: the noun uses its oblique stem **rihtwīsness-** with -e. It remains the same lexical noun.
In **Ic lufie rihtwīsnesse**, “I love righteousness”, rihtwīsnesse is feminine accusative singular, the object of lufie. In isolation that spelling can also be singular genitive or dative. Neither the final -e nor the abstract meaning identifies its case without the clause. Confusing the derivational -nes with the following inflection misses the two different operations. [2, 4]

A06. A lexical noun and a substantival adjective.
Hē onfēng gōdum: "He received goods/possessions." Gōdum is dative plural of the assigned neuter noun gōd. Onfōn governs the dative thing received; an English direct object does not establish an Old English accusative.
Ic geseah ðā rihtwīsan: "I saw the righteous people." In the chapter's selected generic masculine people interpretation, rihtwīsan is a weak accusative plural adjective used substantivally. It denotes the people seen and agrees with the article in case, number and gender. The article supplies the definite expression, and the adjective retains its weak inflection. The plural endings do not distinguish gender. In isolation, the same string could also mean "I saw the righteous woman", with feminine accusative singular; the chapter's explicit people gloss selects the plural reading for this task. An absent following noun does not by itself decide lexical category. Gōd here is the separately evidenced lexical noun "goods"; rihtwīs has the previously taught adjectival personal use. The same surface ending can occur in different word classes and cases. [5]

C. Controlled composition

The stated vocabulary is part of each target. Word order can vary where the case relations and reference remain clear. A defensible synonym may express the sentence correctly while missing the requested word.
C01. Poor men, dogs and wounds.
Ðā wǣdlan gesāwon ðā hundas and ðā wunda.
The poor men are the nominative plural subject; the dogs and wounds are coordinated accusative plural objects. Gesāwon must be plural. Wǣdlan and hundas have matching nominative/accusative plural spellings, but their functions differ here. Wunda belongs to the feminine noun wund; masculine wundas is not its selected plural. Reordering the objects is possible if the same two objects are preserved. [2, 6]

C02. Leaving and giving.
Ic forlǣte ēow sibbe, and ic forgiefe ðǣm ðearfan ðæt goldhord.
"I leave you peace, and I give the poor man the treasure." Both recipients are dative: plural ēow and singular ðǣm ðearfan. Sibbe and ðæt goldhord are accusative things transferred. Forlǣtan here has the newly taught leave-peace frame. Fronting sibbe or another complete constituent can be valid; changing ēow to singular ðē misses the number target. The recipient's weak-noun -an does not make it accusative. [5]

C03. Belief.
Đā wǣdlan gelīefað on God.
The plural poor men believe in God. Gelīefað agrees with the plural subject; **on + accusative** belongs to this belief frame. God has the accusative spelling used here. Do not explain this case as physical motion or substitute dative Gode on the basis of English "in". [5]

C04. Two commands.
Gemiltsa ðǣm wǣdlan, and sęnd him ðæt gold.
"Have mercy on the poor man, and send him the gold." Both commands address one person. Gemiltsian governs the dative person; him is the dative recipient of sęnd, referring to the same poor man. The gold is accusative. Repeating ðǣm wǣdlan instead of him can make the reference explicit, but plural gemiltsiað or sęndað misses the singular-command target. [5]

Cook VIII.26

The original prompts, including their parenthetic controls, remain in the learner chapter. These models are new compositions. The local helps remain available. The specified final-verb arrangements are exercise targets; ordinary alternative orders must be judged separately. [6]
VIII.26.1.
Đū eart dūst, and ðū gewęntst tō dūste.
The same second-person subject is dust and returns to dust. **Dūst** is a nominative predicate; **dūste** is dative after tō. **Gewęntst** has the selected dental contraction. Repeating ðū is clear but not obligatory. Do not give the two occurrences of the noun the same ending merely because English repeats "dust".

VIII.26.2.

Swā swīðe lufode God middangeard, ðæt hē sealde his āncęnnedan Sunu, ðæt nān ne forweorðe ðe on hine gelīefð, ac hæbbe ðæt ēce līf.

God's love results in his giving the Son; the intended outcome of that gift is that the believer should not perish but have eternal life. **Sealde**, from the specified sęllan, states the giving. **Forweorðe** and **hæbbe** are coordinated purpose subjunctives; no separate "may" verb is needed. The article is omitted before **middangeard** as requested. The supplied **nān ... ne** expresses one negation. Bare relative **ðe**, Cook §87.d, introduces the believer's defining action; **gelīefð on hine** uses on with accusative. [6]

The supplied āncęnnedan and the earlier Son expression preserve the intended referent. A different defensible word order may retain the meaning. An inflected relative followed by ðe may be valid elsewhere, but does not satisfy this bare-relative control. Indicatives for both purpose verbs would change the stated construction and blur the distinction between the gift and its intended result.

VIII.26.3.

Se Hǣlend cwæð tō him, Ic eom weg and sōðfæstnes and līf; nān ne cymð tō ðǣm Fæder būtan ðurh mē.

The direct quotation retains the speaker's **ic ... mē**. **Weg, sōðfæstnes, līf** are bare nominative predicates identifying him. The first tō phrase gives the person addressed; **tō ðǣm Fæder** gives the destination. **Ðurh mē** has accusative mē, while the supplied būtan means "except". **Nān ne cymð** is one negation, not an assertion that someone does come. The selected se Hǣlend renders Jesus here; a defensible established personal name could also identify him. Do not add an article to each predicate solely from a familiar modern translation.

VIII.26.4.

Sibbe ic forlǣte ēow; mīne sibbe ic forgiefe ēow.

Both **ēow** forms are plural dative recipients. **Sibbe** is feminine accusative singular, the peace left or given; **mīne** agrees with it. The two first-singular verbs preserve the distinction between leaving peace and giving it. The initial objects emphasize peace, but another clear order is possible. No preposition for "with" is wanted: Cook explicitly omits it, and the taught forlǣtan frame already takes the recipient in the dative. Using forgiefan in the second clause meets the lexical control.

VIII.26.5.

Đā hit rīnde, and ðær cōmon flōdas, and blēowon windas, and āhruron on ðæt hūs; and ðæt hūs fēoll.

The rain expression is supplied. **Flōdas** and **windas** are plural subjects of their respective past verbs and together bear on the house with **āhruron**. That verb has plural past stem -hrur-. The singular house then **fēoll**, from feallan. The on phrase expresses the goal of the assault and has accusative **ðæt hūs**. Keep explicit **ðær**, the narrative past and the two different fall verbs required by the prompt. Hūs is neuter in both occurrences.

VIII.26.6.

Swā ælc gōd trēo birð gōde wæstmas, and ælc yfel trēo birð yfele wæstmas.

Each **trēo** is singular, with third-singular **birð**. Each **wæstmas** is a masculine accusative plural object, hence **gōde** and **yfele**. The subject adjectives are neuter nominative singular **gōd, yfel**. The parallel clauses must retain both the good and the evil tree and their corresponding fruit. C01 corrects the printed prompt's wǣstm to evidenced **wæstm**; the original prompt remains available. An acceptable established beran variant may convey the same sentence, but plural berað would contradict the singular "each tree".

VIII.26.7.

Ælc trēo ðe gōdne wæstm ne birð forcorfen and on fȳr worpen bið.

Bare **ðe** introduces the relative clause; **gōdne wæstm** is its singular masculine accusative object. The tree is the subject of a passive with two coordinated participles, **forcorfen** and **worpen**. **On fȳr** is an accusative goal without an article, as requested. Final **bið** satisfies Cook's verb-last control. [6]

The established participle geworpen is a defensible alternative to worpen. Ordinary auxiliary-first passive order can be grammatical and retain the intended meaning, but it misses the stated final-verb target. A plural fruit object or an inflected relative plus ðe likewise misses a separate explicit control.

VIII.26.8.
Hē ēode on munt, ðæt hē hine gebǣde; and ðā hē hine gebæd, wæs his rēaf hwīt, scīnende.
On munt is the accusative goal of ēode. The intended prayer has past subjunctive **gebǣde**; the subsequent factual when-clause has past indicative **gebæd**. Both occurrences of gebiddan use accusative reflexive **hine**, even though English supplies no matching object. The white, shining raiment is singular neuter **rēaf**, with predicate **hwīt** and the supplied scīnende description. "He was praying" must not prompt an unlicensed literal progressive auxiliary; the clause already expresses the prayer with a finite verb. Omitting either reflexive or confusing the two moods loses a taught distinction.

VIII.26.9.
Se munt, hrēosende, wierð tō nāhte.
The falling mountain comes to nothing. **Wierð** is the selected third-singular present of weorðan. The participle hrēosende and the result expression **tō nāhte** are supplied for this use; neither is an invitation to invent a new independent paradigm. The participle describes the mountain without supplying a second finite predicate. Translating only "the mountain falls" omits the outcome.

VIII.26.10.
Se cyning on eallum his wuldre ne wæs geglęnged swā-swā ān ðissa.
The king was not adorned like one of these, despite all his glory. **On eallum his wuldre** has dative singular wuldre and matching eallum. **Ne wæs geglęnged** is a negative past passive. Cook expressly requests **swā-swā**, and **ān ðissa** means one of these, with genitive plural ðissa dependent on ān. An ordinary single swā might express comparison elsewhere but fails this local connector control. **Wuldre**, not an unchanged wuldor, is the selected syncopated dative.

Cook VIII.27

VIII.27.1.

Hē ætīewde him his dēorwierðu ðing, ðæt seolfor and ðæt gold and ðā wyrtgemang and eall ðæt on his goldhordum gemētt wæs.

He showed the recipients the precious things, including all four listed groups. **Him** is dative plural; the things shown are accusative. ***Ætīewde*** belongs to weak-I ætīewan, the verb required here, and is distinct from the earlier weak-II ætēowian. **His dēorwierðu ðing** uses the allowed strong neuter plural adjective after a possessive; a possessive does not itself make weak inflection compulsory. **His dēorwierðan ðing** is a defensible weak alternative under the earlier possessive rule. [5]

Gemētt wæs describes what was found; **on his goldhordum** is its dative location. Do not turn the treasures into the subject of "was found", or omit the all-that clause after listing silver, gold and spices. The possessive relations and all the listed objects matter more than copying this model's exact order.

VIII.27.2.

Sum welig mann mid gōdwębbe geglęnged wæs.

The subject is a certain rich man. **Mid gōdwębbe** uses the supplied material sense of mid with dative singular; the fine or purple cloth is what adorns him. **Geglęnged wæs** is past passive, with finite **wæs** last as Cook requires. **Sum welig mann wæs mid gōdwębbe geglęnged** is ordinary grammatical order, but fails that specific target. The quantity in gōdwębb is part of the verified selected spelling. [2, 6]

VIII.27.3.

Ðā læg sum wædla æt his geate.

Wædla is a singular nominative subject despite its -a ending; **læg** is singular past. ***Æt his geate*** has dative singular for location, and his preserves the owner of the gate. A different clear narrative order is possible. Confusing weak wædla with a plural would give the wrong subject and verb.

VIII.27.4.
Nān mann him ne geaf; ac hundas cōmon and liccodon his wunda.
No one gave to him; dogs nevertheless came and licked his sores. The negative expression is supplied, with dative **him** and an unexpressed thing given. **Geaf** uses giefan, the verb named in the omission construction taught in §5. **Hundas** is the plural of the dog noun; both **cōmon** and **liccodon** are plural past. **Wunda** is feminine accusative plural, not a masculine form inferred from the original faulty §43 pointer. C04 supplies the evidenced correction while preserving Cook's hint. [6]
The thing given need not be invented. Adding a plausible “food” would add material absent from this prompt. The possessive his belongs to the poor man, while the dogs are the subjects doing the licking.

VIII.27.5.
Đā gelamp ðæt se wǣdla gewāt; and ęnglas bǣron hine tō Abrahames wīce.
The supplied **gelamp ðæt** introduces what happened. **Gewāt** is the poor man's past departure; **ęnglas** are the plural bearers, and **hine** is their accusative object. **Tō … wīce** has dative singular, with the supplied genitive **Abrahames** identifying the dwelling's owner. Do not make the poor man carry the angels or change the internal possessive to a dative. Abrahames is supported here without assigning a full foreign-name paradigm.

VIII.27.6.
Đā āhōf hē his ēagan ūp and geseah Abraham feorran.
Āhōf is the singular past of the specified āhębban; **ēagan** is the weak-neuter accusative plural object. He then **geseah** Abraham. The supplied **feorran** already expresses “from afar”; no extra preposition is required. Separate **ūp** makes the lifting-up explicit. Its omission may retain the sense in āhōf, but an ordinary hębban form would miss the prefixed lexical control. Do not replace ēagan with a regular strong-neuter plural.

VIII.27.7.
Ēalā fæder Abraham, gemiltsa mē, and sęnd Lazarum.
Ēalā fæder Abraham is direct address. The two commands are singular: have mercy on me, and send Lazarus. **Gemiltsa** takes the person in the dative, here mē; **sęnd** takes accusative **Lazarum**, supplied for this name. Mē happens to have the same surface form in dative and accusative, but the government still matters when another noun or pronoun is substituted. A nominative Lazarus does not meet the supplied accusative use.

VIII.27.8.
Ēalā sunu, gemun ðæt ðū onfēnge gōdum on ðīnum līfe.
The supplied **gemun** asks the son to remember an asserted past fact. **Onfēnge** is second singular past indicative, with stem onfēng- and the strong second-singular ending -e. **Gōdum** is the lexical noun "goods", dative plural governed by onfōn. **On ðīnum līfe** is a dative singular phrase, with matching possessive. Do not parse gōdum as an accusative merely because modern English calls goods a direct object.

VIII.27.9.
Ic hālsie ðē ðæt ðū hine tō mīnes fæder hūse sęnde.
This uses the earlier hālsian request frame: **ðē** is the person entreated, **hine** the person to be sent. **Sęnde** is second-singular present subjunctive in the request clause. **Tō … hūse** governs dative singular house, while **mīnes fæder** remains the internal genitive phrase "of my father". The outer preposition does not impose dative on every word inside its noun phrase. A different evidenced request verb may be valid, but merely supplying a citation form of biddan would not explain the required construction. [5]

VIII.27.10.
Gif hīe ðā wītgan ne hīerað, ne gelīefað hīe, ðēah hwā of dēaðe ārīse.
The plural people do not hear the prophets and will not believe. The future-context **gelīefað** needs no added "will" auxiliary. Both main propositions have their own **ne**. **Ðā wītgan** is accusative plural. The supplied indefinite **hwā** is singular subject of concessive subjunctive **ārīse**, placed last in that clause as requested. **Of dēaðe** has dative singular. An indicative would not meet this concession's taught mood; moving ārīse before its of phrase would fail the explicit word-order control even where the resulting order was otherwise defensible.

VIII.27.11.
Tiliað ēow frēonda on Godes ðearfum. Gē habbað manige Lazaras nū licgende æt ēowrum gatum.
The plural addressees are to obtain friends for themselves among God's poor. **Tiliað** is the plural command; **ēow** is its dative reflexive beneficiary, while **frēonda** is the genitive thing sought or obtained. **On Godes ðearfum** uses the supplied dative association/location expression. Neither “for yourselves” nor “friends” should be mechanically turned into an English-style accusative object. [5]
The second sentence says that many people like Lazarus are now lying at their gates. **Manige Lazaras** is the accusative plural object of habbað, with supplied **licgende** describing that object. It is not a new compound tense formed from habban and a participle. ***Æt ēowrum gatum*** has dative plural agreement and the selected short-stem plural gatum. The proper-name plural is supplied; its appearance does not assign an independent Latin-name declension.

S. The Dangers of Greatness

S01. Complete translation.

Every high rank here in the world is surrounded by dangers; the greater the worldly honours, the fiercer the dangers. Thus, from that, we can recognize and understand the examples.

The tree, then, which grows in the woodland so that it towers above all the other trees and spreads itself out—when a storm and the strong wind suddenly come on, it is shaken and battered more violently than the rest of the forest.

It is likewise with the high cliffs and crags: when they tower far above the rest of the earth, they then suddenly begin to fall and crash very violently to the ground.

Likewise with the high mountains and hills, which stand high above the whole world: nevertheless they suffer the penalty of their eminence, in that they are often chastised and afflicted by fire from heaven and struck by thunderbolts.

So the high powers here in the world collapse and fall and come to ruin, and the riches of this world turn to sorrow, and these earthly wonders come to nothing.

“High honour”, “office” or “position” can express ār here; “worldly dignities/distinctions” can express woruldgeðyngða. Preserve the proportional claim: greater rank brings greater danger. **Be ðǣm** refers separately to the preceding claim; **ðā bȳsena** is the accusative object of both “recognize” and “understand”. “From these examples” merges two distinct phrases and misses that syntax. [7]

“Groves” or “woodland grove” can render wudubearwe. The storm and strong wind are coordinated subjects of the source's singular gestęnt; English can use a plural verb. “Set in”, “blow up” or “strike” can convey the storm's onset/assault in context. The tree spreads itself and then receives the shaking. “The rest of the forest” is not a different forest. “Crags” retains Cook's probable contextual interpretation of torrum; the following “rest of the earth” has its own supplied explanation despite the original note's misplaced reference. [7]

The cliff infinitives can be rendered “fall and collapse” or “begin to fall and crash”; they reinforce one downfall. “Pre-eminence”, “supremacy” or “chief place” expresses the mountains' ealdordōm in this comparison. The passive clause explains their penalty; it does not state their purpose. **Līegum** means

thunderbolts/lightning in the selected glossary. Rendering both heofonfȳre and līegum simply as “flames” loses the latter lexical distinction. “Come to naught” is a natural alternative to “come to nothing”. Keep all three human outcomes: powers to ruin, riches to sorrow, wonders to nothing. [7]

S02. The argument.

The opening claim is that high worldly rank brings danger, and increased rank brings greater danger. The three examples proceed from the tall spreading tree, through high cliffs/crags, to high mountains/hills. The exposed tree suffers stronger shaking; cliffs fall violently to earth; mountains pay for their height by suffering heavenly fire and thunderbolts. The conclusion applies these images to human powers, worldly wealth and earthly wonders, whose height or splendour does not prevent their downfall.

A concise paraphrase is sufficient if it preserves the order and connection. Listing three natural objects without explaining their relation to rank and danger misses the argument; adding the following unassigned luxury/death paragraph is unnecessary.

S03. The tree sentence.

All three occurrences of **hit** refer to the tree: the first is the nominative subject of **hlīfað**; the second is the reflexive accusative object of **brǣt**, “spreads itself”; the third is the nominative subject of **bið … gewǣged and geswęnged**, “is shaken and battered”. Identical spelling does not imply an identical case or role.

Đe wiexð on ðæm wudubearwe identifies the tree that grows in the woodland. **Đæt hit hlīfað … and brǣt hit** gives the result of its growth: it towers above the other trees and spreads out. The initial parenthetic ðonne after trēow is “then” in the exposition. The later **ðonne … ðonne** is temporal and correlative: “when the storm and wind come on … then the tree is shaken”. English can omit the resumptive “then”. The final **ðonne** means “than” and introduces the comparison with **se ōðer wudu**, “the rest of the forest”. Do not translate all these occurrences with the same English connective. [7]

S04. The cliffs.
Both **hīe** refer to the high cliffs and crags. **Onginnað** governs both infinitives, **feallan** and **hrēosan**. The two near-synonymous verbs emphasize their fall or collapse; they need not describe two successive falls. **Full ðearlice**, "very violently", intensifies that description, particularly hrēosan. A natural rendering is "they suddenly begin to fall and crash very violently to the ground". Do not attach hrēosan to a different unexpressed finite verb. Cook's historical note is reference material; no knowledge of Chaucer or Greek is required. [7]

S05. Source derivatives.
Ealdordōmes: ealdor + -dōm + -es. The derivational element -dōm forms the noun denoting leadership or primacy; -es is genitive singular inflection. Here the noun denotes the mountains' eminence. **Wīte … ðæs ealdordōmes** is the penalty of that pre-eminence: their height brings exposure to the heavenly assaults. A contextual "penalty for their supremacy" is acceptable; ealdordōmes is not the subject of habbað.
Eorðlican: eorð- + -lic + -an. The derivational -lic forms the adjective "earthly" from the earth family; -an is its weak nominative neuter plural ending here, agreeing with **ðās … wundor**, "these earthly wonders". Its clause determines nominative subject function. The same -an spelling elsewhere would not by itself fix case, number or gender. Neither analysis requires producing unassigned forms of either word. [4, 7]

S06. The conclusion's three subjects.

Subject	Outcome
ðā hēan mihta	hrēosað, feallað, tō lore weorðað: the high powers collapse, fall and come to ruin.
ðisse worulde welan	weorðað tō sorge: the riches of this world turn to sorrow.
ðās eorðlican wundor	weorðað tō nāhte: these earthly wonders come to nothing.

Ðisse worulde is a dependent feminine genitive singular phrase, "of this world", within the second subject. Its head is **welan**, the plural subject "riches". **Ðās** directly determines **wundor** and agrees with it in nominative neuter plural. A plural subject may contain a singular genitive dependent; the dependent phrase does not set the number of weorðað. Keep the riches and wonders as subjects of their own clauses, not objects of the preceding falling verbs. [7]

S07. Pairs and repetitions.
Any two actual examples with a defensible contextual explanation suffice. **Oncnāwan and ongietan** reinforces recognizing and understanding the examples. **Feallan ... hrēosan** in the cliff sentence, or **hrēosað, and feallað** in the conclusion, reinforces collapse without requiring two separate events. The three uses of **weorðað** with **tō lore, tō sorge, tō nāhte** align the ruin, sorrow and nothingness of worldly possessions and power; the order of verb and tō phrase varies. Repeated height vocabulary, such as **hēah ār**, **hēaclifum**, **hēagum muntum** and **hēan mihta**, joins social rank to the natural illustrations.
Another genuine pair or repetition is acceptable if quoted accurately and tied to this argument. Naming a general device without quoting the passage, or asserting that every repeated verb describes an additional event, misses the task.

Sources and selected forms

1. Scope and assessment. Cook's *Exercises in Old English* (1895), Group VIII, Exercises 26–27, printed pp. 13–15 / one-based PDF 21–23, supplies the unchanged English prompts. The Old English responses and the original exercise answers are new teaching compositions. The unit's separately defined morphology and lexical frames govern its selected models. The source and supplied helps remain available during supported work.

2. Nouns and reference cells. Cook, *A First Book in Old English*, second edition (1895), §§43, 47, 51 and 53, printed pp. 28–37 / PDF 44–53. Section 53.2 gives the weak-neuter ēage relation and alternate genitive plural ēagna. Section 51.5 explains -nes with oblique -ness-. Selected lexical quantities are checked against the glossary: dūst at p. 283 / PDF 299, gōd-wębb at p. 296 / PDF 312. Tables mark abstract/material number references separately from ordinary production.

3. Verbal systems. Cook §§93–95, pp. 54–55; strong-II/III models pp. 60–62; strong V–VII pp. 63–67; weak I pp. 68–72; weak II §§118–119, pp. 73–74; dental changes pp. 24–25. These rules and the individual lexical entries support the selected complete systems. Past participle prefixes and lexical ge- remain distinct. Bosworth–Toller, main p. 303b, for-ceorfan, corroborates forceorfende and forcorfen. Citation diagnostics do not assign unlisted syntactic uses.

4. Word formation. Cook §§142–147, pp. 81–87, supplies the bounded prefix, suffix and compound analysis; §70, p. 44, supplies the selected adverb families. The individual glossary entries establish whole-word meanings. The source ealdordōmes and eorðlican have their supplied contextual analyses; no additional productive paradigms follow from their segmentation.

5. Government and earlier scope. Cook's dative and genitive constructions, pp. 91–95, and prepositions, pp. 96–99, are read with the actual lexical entries. The selected onfōn and gemiltsian dative examples occur on p. 94. Bosworth–Toller, main p. 411b, ge-lýfan, directly corroborates belief on + accusative in on hine gelýfan; the course retains Cook's selected ie spelling. Reflexive uses under §184.a/b are on pp. 100–101. Earlier Unit 11 explicitly teaches the article-plus-weak rihtwīs personal expression; Unit 12 teaches the sęndan recipient and command frames; Unit 13 teaches the hālsian request. Unit 3 allows strong or weak adjectives after a possessive; weak inflection is not compulsory solely because his precedes the adjective.

6. Original controls and corrections. Cook §87.d, p. 52 / PDF 68, gives bare relative ðe. Purpose under §196.f, p. 105 / PDF 121, is distinct from asserted result. Preserve the final-verb controls in 26.7, 27.2 and the concessive clause of 27.10. Correction C01 retains original wǣstm in 26.6 while selecting evidenced wæstm. C04 retains 27.4's original wund, 43 but identifies the feminine wound noun: Bosworth–Toller main p. 1281a and Supplement p. 570b, where the relevant Luke 16.21 citation has his wunda liccodon. Cook's §43 is masculine; §51.b, p. 35,

supplies the selected feminine pattern. The adjective wund in Cook's glossary is a distinct word.

7. Reading. Cook, Reader VIII, *The Dangers of Greatness*, printed 156.1–158.4 / PDF 172–174, is the complete assigned opening argument, 159 words. Prose-line counts are editorial, anchored by printed marginal numbers. The following luxury/death argument is unassigned. All 24 attached original notes and 25 anchors are retained in the learner chapter. Source note 156.9 identifies wind as the second subject of gestęnt; 156.11 explains se ōðer wudu as the rest of the forest. C05 preserves the apparent mismatch in 157.1's printed pointer to 156.12 and identifies 156.11 as the relevant parallel. Cook p. 303 / PDF 319 glosses līeg as thunderbolt/levin. The source's qualified attribution is retained; its literary parallels are Cook's suggestions, not newly established borrowings.

UNIT 15

Answer key

The Old English composition answers are new teaching material. The three reading translations render the wording printed by Cook. A model gives one defensible answer; the notes distinguish its grammatical target from other valid language.

Preserve the meaning, case relations, agreement, tense and clause connections. Cook's explicit lexical hints, omissions and word-order controls are separate requirements. Original composition directions likewise name their required patterns. Elsewhere, a different grammatical order or an evidenced spelling variant is acceptable. Supplied expressions and reading helps remain available during the tasks; their unaided recall is not required.

N = nominative, G = genitive, D = dative, A = accusative. Complete tables below answer each requested position, including positions whose spellings coincide. Negative concord normally requires one negative English proposition, rather than a word-for-word accumulation of English negatives.

F. Complete forms

F01

wesan

Person and number	Present	Preterite
1 sg.	ne eom	næs
2 sg.	ne eart	nǣre
3 sg.	nis	næs
1–3 pl.	ne sindon	nǣron

There are six person/number positions in each of two tenses. Identical plural forms do not erase those distinctions. Present **ne eom**, **ne eart** and **ne sindon** contain two words; **nis** and the displayed negative preterites are contractions. The table covers the eom/wæs series.
Uncontracted ne with the corresponding positive verb can express valid negation, but this task explicitly requests the selected contractions where available. **Nis** is third singular, not an all-purpose negative form.

F02

nabban

Person and number	Present	Preterite
1 sg.	næbbe	næfde
2 sg.	næfst	næfdest
3 sg.	næfð	næfde
1–3 pl.	nabbað	næfdon

Present: **næbbe**, “I do not have (it)”; **nabbað**, “they do not have (it)”. Preterite: **næfde**, “I did not have (it)”; **næfdon**, “they did not have (it)”. The understood object depends on the context; these forms deny possession. Keep present **næfst/næfð** distinct from past **næfdest/næfde**. A separate-ne construction may be grammatical but does not supply the requested nabban paradigm.

F03

willan

Person and number	Present	Preterite
1 sg.	nelle	nolde
2 sg.	nelt	noldest
3 sg.	nele	nolde
1–3 pl.	nellað	noldon

With going as the complement: **nelle**, “I am unwilling/refuse to go”; **nelt**, “you singular are unwilling/refuse to go”; **nolde**, “I was unwilling/refused to go”; **noldest**, “you singular were unwilling/refused to go”. The forms express unwillingness here, rather than merely predicting that no going will occur. Cook also records the y-series and variation in single/double l. Those are genuine alternatives, but the exercise requests the displayed e-series. Do not use the past **nolde** for every present refusal.

F04
nān

Case	Masculine singular	Neuter singular	Feminine singular
Nominative	nān	nān	nān
Genitive	nānes	nānes	nānre
Dative	nānum	nānum	nānre
Accusative	nānne	nān	nāne

Case	Masculine plural	Neuter plural	Feminine plural
Nominative	nāne	nān	nāna
Genitive	nānra	nānra	nānra
Dative	nānum	nānum	nānum
Accusative	nāne	nān	nāna

Nānum is D singular masculine or neuter, or D plural of any gender. The noun and clause determine which position is intended. A repeated ending is not a unique gender/number label.
The target is the complete strong N/G/D/A system. In clauses, the negative noun phrase can combine with finite ne or a contracted negative verb to express one denial.

F05
gehwā / gehwæt

Case	Neuter singular	Common singular
Nominative	gehwæt	gehwā
Genitive	gehwæs	gehwæs
Dative	gehwæm	gehwæm
Accusative	gehwæt	gehwone

Gehwā distributes over persons, **gehwæt** over things. Their potentially numerous referents do not make the pronoun grammatically plural. This defined system has personal and neuter singular columns.
Distinguish personal A **gehwone** from N **gehwā**; G **gehwæs** and D **gehwæm** serve both columns. No plural is to be invented from an English gloss such as everyone.

F06

bōc

Case	Singular	Plural
Nominative	bōc	bēc
Genitive	bēc	bōca
Dative	bēc	bōcum
Accusative	bōc	bēc

tōð

Case	Singular	Plural
Nominative	tōð	tēð
Genitive	tōðes	tōða
Dative	tēð	tōðum
Accusative	tōð	tēð

Bōc has **bēc** in G/D singular and N/A plural; G/D plural return to **bōca/bōcum**. **Tōð** has **tēð** in D singular and N/A plural, but **tōðes** in G singular and **tōða/tōðum** in G/D plural. The two vowel patterns are not identical. For example, **bēc** alone has four possible positions, whereas **bōcum** identifies D plural within this table. **Tēð** can be D singular or N/A plural. Sentence function resolves a syncretic spelling; do not assign every front-vowel form the same case.

F07

sweostor

Case	Singular	Plural
Nominative	sweostor	sweostor
Genitive	sweostor	sweostra
Dative	sweostor	sweostrum
Accusative	sweostor	sweostor

The selected table has three distinct surfaces: **sweostor**, **sweostra**, **sweostrum**. Bōc has four: bōc, bēc, bōca, bōcum. **Sweostor** occupies all four singular positions and N/A plural.
Case still follows the phrase's role: an object sweostor is accusative even though its spelling is also nominative. The number of endings is not the number of grammatical cases. Documented variants remain possible, but this task asks for the selected table.

F08

hǣtu

Case	Singular
Nominative	hǣtu
Genitive	hǣte
Dative	hǣte
Accusative	hǣte

hǣlu

Case	Singular
Nominative	hǣlu
Genitive	hǣlu
Dative	hǣlu
Accusative	hǣlu

The selected **hǣtu** singular has nominative -u and oblique -e. **Hǣlu** is invariant in the selected singular system. The attested alternatives listed in the lesson remain alternatives; the present form task asks for its selected spellings.

The unassigned plural slots mark a teaching and sense limit. They neither establish count meanings such as separate salvations/heats nor assert that no historical plural ever occurred. The full strengu class reference shows class morphology without assigning those meanings to hǣlu or hǣtu.

F09

gerēfa

Case	Singular	Plural
Nominative	gerēfa	gerēfan
Genitive	gerēfan	gerēfena
Dative	gerēfan	gerēfum
Accusative	gerēfan	gerēfan

lēoðwyrhta

Case	Singular	Plural
Nominative	lēoðwyrhta	lēoðwyrhtan
Genitive	lēoðwyrhtan	lēoðwyrhtena
Dative	lēoðwyrhtan	lēoðwyrhtum
Accusative	lēoðwyrhtan	lēoðwyrhtan

Both nouns have weak masculine endings: nominative singular -a, other singular cases -an, plural N/A -an, G -ena, D -um. In **lēoðwyrhta**, the head is wyrhta and the ending belongs at the end of the whole compound.
Lēoð- remains the fixed first element. Do not give it a separate case ending or confuse **lēoðwyrhtena** with the dative plural **lēoðwyrhtum**.

A. Analysis

A01

1. **Nān** and **ne**: "No man comes." The denial excludes any person's coming.
2. **Næfre** and **ne**: "The king never came." The denial covers every occasion in the relevant past.
3. **Nān**, **nāwiht** and **ne**: "No man has anything." The negative expressions reinforce one denial; they do not affirm possession.

"Nobody comes" and "nobody has anything" are idiomatic alternatives. Turning the third clause into a positive statement loses its essential meaning.

A02

Ic self gā, and nā ōðer affirms the speaker's going and excludes **ōðer**, another person, as the goer. **Nā** negates that contrasted participant. **Ic ne gā** instead denies the speaker's going: finite **ne** negates the proposition.
"I myself go, and no one else" and "I do not go" preserve the distinction. Do not translate the first clause as the speaker's refusal or failure to go.

A03

1. **Hwā cymð?**: interrogative, “Who comes?” Hwā is the nominative singular subject.
2. **Gif hwā cume, ic him bōc sęlle**: indefinite, “If anyone comes, I shall give him a book.” Hwā is the subordinate subject; ic is the main subject.
3. **Swā hwā swā cume, ic him bōc sęlle**: free choice, “Whoever comes, I shall give him a book.” Hwā again supplies the subordinate subject, ic the main subject.

“If someone comes” is possible for the indefinite clause. The repeated swā marks the unrestricted choice in the third; it is not another question asking the person’s identity.

A04

***Æ*lc mann** treats the men one by one: each has one penny. The head mann is singular and takes **hæfð**. **Ealle ðā męnn** includes the entire group: all the men have food. The head męnn is plural and takes **habbað**.
The two statements do not make the same distribution claim. Collective all does not itself say that each member has exactly one item.

A05

***Æ*gðer ge … ge** includes both objects: **ðone cyning**, accusative masculine singular, and **his sunu**, accusative masculine singular. His identifies the king as the son’s possessor. The meaning is “I love both the king and his son.” The relation is inclusive, not an exclusive choice of one object. The two ge elements are paired coordinators here.

A06

Man sceal gān means “One must go” or “People must go”: impersonal man supplies a generic subject, with third-singular **sceal**. **Se mann gǣð**, “The man goes”, identifies a particular person; **gǣð** is also third singular.
The generic use is a nominative-singular subject expression. It introduces no new oblique or plural pronoun paradigm. English “people” in the translation does not change the Old English verb to a plural.

A07

1. **Đēos bōc is swā gōd swā sēo bōc**: equality, “This book is as good as that book.” Sēo bōc is the standard after the second swā, with is gōd understood.
2. **Ic lufie lēoht swīðor ðonne ðīestru**: preference, “I love light more than darkness.” Darkness is the contrasted object, accusative like light.
3. **Swā ðēos bōc māre is, swā hēo bętere is**: proportion, “The larger this book is, the better it is.” Each correlated clause has its own subject and comparative predicate.

The proportional statement connects two degrees; it does not call size and goodness equal. In the second clause “rather than” can express the preference, provided the two objects remain clear.

A08

Hwā is nominative, as subject of **cume** within the free-choice clause. **Him** is dative, as recipient with **sęlle** in the main clause. The two forms refer to the same possible person but perform different grammatical jobs.
The explicit main-clause pronoun keeps those jobs separate. Making hwā dative simply because that person later receives the gift would miss the task’s internal-case construction.

A09

In **ānum uncer**, **ānum** is dative singular because the setting makes the selected person a recipient. **Uncer** is the personal genitive dual, “of us two”, naming the group from which that one is chosen.
In subject **uncer hūs**, **uncer** is the agreeing possessive, nominative neuter singular, “our house” belonging to the two of us. The dual identifies the possessors, not two houses.
The identical spelling does not erase the distinction between a personal genitive dependent on ānum and a possessive agreeing with hūs.

A10

1. **Hæfð hē āwiht?** — "Does he have anything?" A question about possession.
2. **Hē nāwiht ne hæfð.** — "He has nothing" or "He does not have anything." A denial of possession.
3. **Hē hæfð hwæthwega.** — "He has something." A positive assertion.

Nāwiht and finite **ne** express a single negative in the middle clause. The supplied meanings may be consulted; the task does not require memorizing the two supplied indefinite expressions.

A11

In the story opening, **ān** introduces "a certain man", an unnamed new participant. In the numerical contrast it means "one man", as opposed to two. In both settings it agrees with nominative masculine singular **mann**. Context changes the sense, not the agreement. "A man came" is idiomatic for the first setting; a translation of the second must retain the explicit numerical contrast.

A12

The ending-bearing stem of **hēafod** is **hēafd-**, as in hēafdes, hēafde, hēafda and hēafdum. Its selected N/A plural is **hēafdu**. The displayed **fōtsceamul-** retains its medial vowel before the endings.

These lexical diagnostics govern the selected forms. Deleting every medial vowel would fail to produce the fōtsceamul table; it is not a general operation licensed by the word's length.

C. Original composition

C01

Nān mann ne hæfð bōc; gehwā hæfð męte.

Nān … ne gives one denial; **gehwā** is singular "each person". Bōc and męte are accusative objects. A different grammatical order is possible, but the directions require nān and personal gehwā; a generic plural all would not meet that distributive target.

C02
Ic næfde ðā bōc, and ic nolde gān.
Næfde denies past possession, and **nolde** expresses past unwillingness with plain **gān**. The two meanings must remain separate. Uncontracted ne hæfde/ne wolde can express valid language, but the specified task requires the contractions.

C03
Hæfð se cyning ænige bōc? Hē ne hæfð nāne bōc.
Ænige and **nāne** agree with accusative feminine singular bōc. The question is not already negative; the reply uses **nān** with finite **ne**. A contracted negative possession verb is also possible in the reply if agreement and the specified nān are preserved.

C04
Gif hwā bōc hæbbe, ic him pęning sęlle.
The directions make the condition potential: **hwā** is indefinite and **hæbbe** present subjunctive. **Him** is the main-clause recipient; the present **sęlle** expresses the promised giving. An indicative condition can be grammatical in a factual setting but would not meet the stated potential-clause target.

C05
Swā hwā swā gā, ic him pęning sęlle.
The complete **swā hwā swā** expression means whoever. **Gā** is the requested present subjunctive; **him** resumes the person as dative recipient. Omitting the free-choice frame and writing an ordinary question changes the meaning.

C06
Swā hwæðer ðissa twēgra suna swā ǣrest cume, ic him ðā bōc sęlle.
Hwæðer is nominative as subject of **cume**. **Ðissa twēgra suna** is the genitive group “of these two sons”; **him** separately expresses the main-clause recipient. This is the requested potential clause with internal case, not the specially supplied attracted-case construction in Cook 31.12.

C07
Man mæg gān.
Impersonal **man** takes third-singular **mæg** and plain **gān**: “one can go”. A specific se mann would introduce a particular man. Sceal would express obligation rather than the requested ability.

C08
Ælc sunu hæfð āne bōc; ealle ðā suna habbað męte.
Ælc sunu … hæfð is singular and distributive; **ealle ðā suna … habbað** is plural and collective. **Āne** agrees with feminine accusative bōc. “All” does not make the first clause’s one-per-son distribution explicit.

C09
Ic gesēo ægðer ge ðone cyning ge his sunu.
The paired **ægðer ge … ge** includes both accusative objects. His sunu is the king’s son. An ordinary and-coordination may preserve the broad meaning but does not demonstrate the required paired construction.

C10
Swā ðæt hūs māre is, swā hit bętere is.
The two **swā** clauses correlate increasing size and goodness. **Māre** and **bętere** are neuter singular with hūs; **hit** resumes it. This is a proportional comparison, not equal-degree as … as.

C11
Ðēos bōc is swā gōd swā sēo bōc, ac ðæs cyninges bōc is bętere.
The first **swā … swā** compares the books’ goodness as equal. **Ðæs cyninges** is the possessor of the third book; **bętere** is its comparative predicate. Inserting ðonne for the equality standard would change the comparison.

C12
Hē lufað męte swīðor ðonne wīn.
Swīðor compares preference for the two objects, męte and wīn. The standard is an understood second object of lufað, not a new agent. “More than” and “rather than” express the intended preference here; the direction specifically requests swīðor.

C13
Ne gā; sęle ðǣm wǣdlan ðā bōc.
Ne gā is a singular negative command; **sęle** a singular affirmative command. **Ðǣm wǣdlan** is the dative recipient and **ðā bōc** the accusative gift. Subject pronoun ðū may be expressed; plural commands would not address the specified one person.

C14
Hē self gǣð, and nā ōðer.
The going is affirmed of **hē self**. **Nā ōðer** excludes another man as the goer; it does not negate gǣð. The stated male referent accounts for self and ōðer in these selected forms.

C15
Ic nānum męnn nāwiht ne sęlle.
Nānum męnn is the dative recipient, **nāwiht** the thing given, and **ne** finite negation. Together they mean "I give nothing to anyone". The two specified negative expressions do not cancel each other. Other idiomatic negative phrasings can be valid but do not meet this three-part target.

C16
Nānes mannes sunu ne cymð.
Nānes mannes is the negative genitive possessor of subject sunu. **Ne cymð** agrees with the singular son. The task requires nān inside that genitive phrase; a different placement of no could change the scope or miss the specified construction.

C17
Se cyning næfð nāna bēc.
Næfð is third-singular negative possession. **Nāna bēc** is accusative feminine plural: no books. Bēc here is not the identical-looking genitive or dative singular. The contracted verb already includes finite negation.

C18
Se cyning gesiehð gehwone; gehwæs sunu is gōd.
Gehwone is the accusative person seen; **gehwæs** is the genitive person whose son is good. Neither the repeated English each nor the common reference licenses nominative gehwā in those two positions.

C19

Ān mann cōm, and hē hæfde bōc.

Ān mann introduces an unnamed person rather than insisting on a numerical contrast. **Hē** then maintains that reference. “Sum mann” can also introduce a certain man, but the direction here requires indefinite ān. No English-style indefinite article is needed before the second bōc.

Cook IX.28

Cook IX.28.1

Ælc ðe for mīnum naman his hūs oððe his brōðor oððe his sweostor oððe his fæder oððe his mōdor oððe his wīf oððe his bearn oððe his land forlǣtt, him mid hundtēontigum forgolden bið, and hē hæfð ðær-tō-ēacan ēce līf.

Ælc ðe ... forlǣtt names the person; the following **him ... forgolden bið** resumes that person as a dative recipient in the supplied passive construction. The finite **bið** is last in its clause, as directed. **Mid hundtēontigum** supplies the hundredfold repayment; **hē hæfð** expresses the promised future possession. Brōðor and sweostor are accusative plural here despite their syncretic spellings. Preserve every alternative in the list and the additional eternal life; do not insert the omitted impersonal it or a mechanical shall auxiliary.

Cook IX.28.2

Hē sealde ælcum pęning wið his dæges weorce.

Sealde supplies the specified sęllan. ***Ælcum*** is the recipient, **pęning** the payment, and **wið his dæges weorce** the exchange: in return for his day’s work. Dæges is a genitive dependent on dative weorce. A numeral can make the single penny explicit, but confusing the exchange phrase with an opponent changes the sense of wið.

Cook IX.28.3

Hē sęnde hīe on his wīngeard.

Hīe is the accusative people sent; **on his wīngeard** has the requested directional accusative, into the vineyard. A static dative vineyard would express location rather than the movement specified by into.

Cook IX.28.4
Hē geseah ōðre on strǣte īdle standan.
The perception construction has **hīe/ōðre** as an accusative participant with plain **standan**: he saw others stand/standing. **Īdle** agrees with those people; **on strǣte** uses the newly taught public-place sense without an article. English standing does not require a participle when the exercise explicitly selects this infinitive construction.

Cook IX.28.5
Đā cwæð hē, Gāð gē ēac on mīnne wīngeard, and ic ēow sęlle ðæt riht is.
Gāð gē addresses the plural workers. **On mīnne wīngeard** is directional accusative; **ēow** is the dative recipient with **sęlle**. The required **ðæt riht is** means what is right, with riht as a neuter predicate. Preserve the promise of giving what is right, not a statement that the workers are right.

Cook IX.28.6
Ęft hē ēode ūt ymbe ðā siextan and nigoðan tīd, and gelīce dyde.
Ęft means once more. **Ymbe** governs the accusative hour expression; familiar **siextan** and supplied **nigoðan** agree with feminine tīd. **Gelīce** is an adverb, "similarly", modifying dyde; it is not the plural predicate adjective of 29.1. Different grammatical placement of the adverb is possible without changing either hour.

Cook IX.28.7
Đā ymbe ðā endleftan tīd hē ēode ūt, and funde ōðre standende.
The supplied **ðā endleftan tīd** is accusative after ymbe. **Ōðre** is the object of funde and **standende** the explicitly requested present participle describing them. A perception infinitive may be possible elsewhere, but it would not meet this item's participle control.

Cook IX.28.8
Đā cwæð hē, Hwȳ standað gē hēr ealne dæg īdle?
Standað gē is a plural indicative question, not an order to stand. **Ealne dæg** is accusative duration, all day; **īdle** describes the plural people addressed. Hēr gives the place. Do not infer a singular verb from the single day.

Cook IX.28.9
Đā cwǣdon hīe, For-ðon-ðe nān mann ūs ne hȳrode.
The causal clause has negative subject **nān mann**, object **ūs**, and finite **ne hȳrode**. It states one denial: nobody hired us. The preterite follows Cook's omission of hath. An evidenced equivalent causal conjunction is acceptable, but reversing the negative into nobody failed to hire us is not.

Cook IX.28.10
Sōðlice, ðā hit ǣfen geworden wæs, ðā cwæð ðæs wīngeardes hlāford tō his gerēfan, Cleopa ðā wyrhtan, and forgield him hiera mēde.
The supplied **ðā hit ǣfen geworden wæs** presents the evening as having come. **Ðæs wīngeardes** depends on hlāford; **tō his gerēfan** identifies the steward addressed. **Cleopa** and **forgield** are singular commands. The workers are accusative **ðā wyrhtan**; payment has dative **him** and accusative singular **hiera mēde**, their hire. Do not make the recipient accusative merely because modern English says pay them.

Cook IX.28.11
Eornostlice, ðā ðā cōmon ðe ymbe ðā endleftan tīd cōmon, ðā onfēngon hīe ælc his pęning.
The first **ðā** introduces when; the second refers to those who came. The relative clause ends with **cōmon**, satisfying the stated final-verb control. Main **onfēngon** agrees with plural hīe; distributive **ælc his pęning** says that each received his own penny. The bounded payment frame permits accusative pęning. Treating ælc as the sole singular subject would lose the plural received they.

Cook IX.28.12
And ðā ðe ðǣr ǣrest cōmon wēndon ðæt hīe māre onfōn sceolden.
Wēndon means supposed/thought and introduces the content clause. **Sceolden** is the selected reported preterite subjunctive plural, expressing the expected receipt; it need not mean moral obligation. **Māre** is substantive neuter, a greater amount, and the object of onfōn. Keep **ðǣr** and the first arrivals; preferential swīðor would not mean more payment.

Cook IX.29

Cook IX.29.1

Đū dydest hīe ūs gelīce, ðe bǣron hęfignessa on ðisses dæges hǣte.
Hīe is the accusative object made equal, **gelīce** its agreeing plural complement, and **ūs** the dative comparison standard. The relative clause concerns **us**, the speakers who bore the burdens; **bǣron** is first plural in that relation. **Hęfignessa** is the accusative plural burdens, and **on ðisses dæges hǣte** gives this day's heat. An adverbial similarly would not express the required equal-to-us relation.

Cook IX.29.2

Nim ðæt ðīn is, and gā; ic wille ðissum eall swā micel sęllan swā ðē.
Nim … gā are singular commands. **Ðæt ðīn is** is the thing that belongs to the addressee. **Eall swā micel swā** means just as much as; **ðissum** and **ðē** are the two dative recipients under the giving verb, expressed or understood. Do not turn the quantity comparison into one between the recipients' size.

Cook IX.29.3

Ne mōt ic dōn ðæt ic wille?
Ne mōt ic …? asks about permission: "May I not …?" **Dōn** is the plain infinitive after mōt, and **ðæt ic wille** the required free-standing relative content, what I wish. A question about ability with magan would not retain the permission sense.

Cook IX.29.4

Ne cōme ðū tō mē tō wyrceanne wið ānum pęninge?
Ne cōme ðū …? is a past second-singular indicative question. **Tō wyrceanne** is the required inflected infinitive for the work's purpose; **wið ānum pęninge** is dative exchange, for one penny. Plain wyrcean after tō would miss the inflected-infinitive target. Cōme here is not subjunctive merely because the question is negative.

Cook IX.29.5
Hē wæs wer and wītga, mihtig on worde and on weorce beforan Gode and eallum folce.
One person is described as both **wer** and **wītga**; the finite verb remains singular wæs. **Mihtig** is the masculine predicate, with on worde/on weorce specifying speech and deed. **Beforan Gode and eallum folce** has the dative terms. The earlier taught spelling wītga expresses the unqualified English prophet; the prompt does not require a new spelling variant.

Cook IX.29.6
Đæt is se dōm, ðæt lēoht on middangeard cōm, and męnn lufodon ðīestru swīðor ðonne ðæt lēoht, for-ðon-ðe hiera weorc yfel wǣron.
Đæt is se dōm introduces the judgment, followed by its content. Light came into the world; men preferred darkness to the light. **Ðīestru** is morphologically plural, and **swīðor ðonne** compares preference between accusative objects. **Hiera weorc … wǣron** is plural, with the selected neuter plural **yfel**. Do not make darkness the subject who loved.

Cook IX.29.7
God ne sęnde his sunu on middangeard ðæt hē middangeard dēmde, ac ðæt middangeard ðurh hine hǣled wǣre.
The contrast rejects the purpose of condemnation and asserts the purpose of salvation. In context **ne … ðæt … ac ðæt** does not deny that God sent his Son. Past purpose **dēmde** is subjunctive; **hǣled wǣre** is the corresponding passive purpose, with **ðurh hine** naming mediation. “God did not send him at all” loses the contrast; both purposes must remain explicit.

Cook IX.29.8
Ēowru mēd bið miclu, and gē bēoð ðæs Hēahstan bearn; for-ðon-ðe hē is gōd ofer ungeðancfulle and yfele.
Mēd is feminine: selected **ēowru** and **miclu** agree with it. **Gē bēoð … bearn** expresses the promised relationship; **ðæs Hēahstan** is the supplied divine title in the genitive. **Ofer ungeðancfulle and yfele** has the newly taught personal objects, the unthankful and evil people, after kind toward. They are not feminine singular reward adjectives. Keep the distinction between promise and the reason given for it.

Cook IX.29.9
Giefað, and ēow bið giefen.
Giefað is plural imperative. The following supplied impersonal passive **ēow bið giefen** keeps the dative recipients and omits it as directed. An English translation may need “it will be given to you”; that does not require an Old English hit in this controlled response.

Cook IX.29.10
Se leornungcniht nis ofer his lārēow.
Nis is negative third-singular be; **ofer his lārēow** is the accusative standard of rank. The disciple is not above his master. A spatial interpretation of standing over the teacher would miss the intended relation. Uncontracted ne is can be grammatical, although nis is the selected new contraction.

Cook IX.29.11
Ætīew ūs ðīne mildheortnesse, and unne ūs ðīnre hǣlu.
Ætīew is the singular command show; its first vowel remains short in the selected spelling. **Unne** is the second-singular present subjunctive used as an addressed request, as taught in Unit 10. Unnan takes dative **ūs** and genitive **ðīnre hǣlu** for what is granted. Do not copy the accusative mildheortnesse frame into the grant clause merely because the two verbs share the same English object order.

Cook IX.30

Cook IX.30.1
Ne swęre ðū ðurh heofon, for-ðon-ðe hē is Godes setl; ne ðurh eorðan, for-ðon-ðe hēo is his fōtsceamul; ne ðurh Hierusalem, for-ðon-ðe hēo is mǣres cyninges burg.
Ne swęre ðū is a singular prohibition; the following **ne ðurh** phrases continue it. Each **ðurh** names the oath standard in the accusative. Heaven is masculine (**hē**), earth feminine (**hēo**); Hierusalem is supplied. The great king is **mǣres cyninges**, genitive dependent on burg. Cook directs omission of both articles: the bare genitive phrase takes strong **mǣres**, not article-led weak ðæs mǣran. English nor may combine the later prohibitions; it must not remove one of the three standards.

Cook IX.30.2
Ne swęre ðurh ðīn hēafod, for-ðon-ðe ðū ne meaht ān hǣr hwīt oððe blæc wyrcean.
Hēafod and **hǣr** are neuter. In **ān hǣr hwīt oððe blæc wyrcean**, the one hair is the accusative object and the two colors are its agreeing neuter complements. **Ne meaht** denies ability. Masculine ānne/hwītne/blæcne would not agree with this noun. **Ðurh** introduces what the speaker swears by.

Cook IX.30.3
Sīe ēower word swā, Hit is, hit nis.
Sīe expresses the present subjunctive wish taught in Unit 7, "let your speech be …". **Ēower** refers to plural possessors, while word is singular. The quoted alternatives **hit is, hit nis** contrast affirmation and denial. A second plural possessive does not require a plural verb for the single word/speech.

Cook IX.30.4
Gē hīerdon ðæt cweden wæs, Ēage for ēagan, and tōð for tēð.
Gē hīerdon follows the omitted English perfect auxiliary. The passive **cweden wæs** has no inserted it. In the formula, **ēage/tōð** are nominative and **ēagan/tēð** dative after the specified for. The second tēð is dative singular, not automatically plural teeth. Preserve both exchanges.

Cook IX.30.5
Se ðe tōwierpð ān of ðissum lǣstum bebodum, and swā męnn lǣrð, sē bið lǣst hāten on heofona rīce.
Se ðe …, resumed by **sē**, identifies the person. **Ān of ðissum lǣstum bebodum** selects one commandment from a dative-plural group. The second relative action has **swā męnn lǣrð**, with its finite verb last as instructed. Main **lǣst hāten** describes the person's rank, not the size of a commandment. The selected hātan means be called/named; another valid naming verb must still preserve the passive and predicate.

Cook IX.30.6
Se ðe hit dēð and lǣrð, sē bið micel hāten.
The two verbs share object **hit**. **Se ðe** is resumed by **sē**; **micel hāten** says that the person will be called great. The original prompt does not require an additional the same. Do not carry least from the preceding item into this one.

Cook IX.30.7
Gē hīerdon ðæt on ealdum tīdum cweden wæs, Ne sleah ðū.
On ealdum tīdum is a dative plural time phrase. **Ne sleah ðū** is the singular negative command quoted within the passive report. The selected uncontracted command retains the previously taught short diphthong spelling. Cook's omitted have and it are not to be reintroduced mechanically into the Old English model.

Cook IX.30.8
Is hit ðīn eorðe?
Is hit ðīn eorðe? asks about the singular addressee's earth. The prompt says earth, not oath. **Ðīn** agrees with feminine eorðe; hit provides the identifying subject. Plural ēower would fail the explicit singular-your direction.

Cook IX.30.9
Hē hæfð æt his gewinne ðæt hē mæg.
Æt his gewinne is the supplied source/proceeds use, from his labor. **Ðæt hē mæg** leaves an understood acquisition/action after the modal: what he can [obtain]. It does not ask where he works. Keep the locally supported sense and ellipsis instead of guessing them from the familiar preposition or modal alone.

Cook IX.30.10
Sēo sunne forbærnde his æcer.
Sēo sunne is feminine nominative; **his æcer** is accusative singular.
Forbærnde is the transitive preterite, burned/parched. An idiomatic rendering may express the scorching result, but the field must remain the affected object rather than the thing doing the burning.

Cook IX.30.11
Đā wegas sceoldon blōstmian, ðā wegas sceoldon blōstmian; swā fægeru brȳd sceal hiere hām forlǣtan.
Both parallel clauses use plural **sceoldon** with plain **blōstmian**; preserve their repetition. The bride is feminine, hence selected **fægeru**, and **hiere hām** is the accusative home left. **Sceal** is singular with brȳd. The noun hām is distinct from the earlier homewards adverb; the modal complements remain infinitives, not participles. The model takes should as modal ought to, using **sceoldon**. English should is not a mechanical instruction to place the event in the past: a coherent present expectation or obligation can use **sculon**. A subjunctive wish such as **scylen** changes the modality and needs an explicit wish reading.

Cook IX.30.12
Gif hīe magon, lǣt hīe libban būtan mē.
The condition uses ability, **gif hīe magon**, as the prompt says can. Supplied **lǣt hīe libban** is a singular command with accusative participants and a plain infinitive; **būtan mē** means without me. Replacing magon with a wish/volition verb changes the condition.

Cook IX.30.13
Hē ne forlǣtt nǣfre ðā ðe on hine gelīefað.
Ne … nǣfre expresses one never. **Ðā ðe …** is the accusative object of forlǣtt; the relative clause has **on hine** for the person trusted. Do not cancel the negatives or treat this belief-on relation as physical position.

Cook X, XI.31

Cook X, XI.31.1

Ic wāt sōðlice ðæt mīn Ālīesend leofað.
Wāt states present knowledge; **leofað** is the selected present third singular of libban. **Mīn Ālīesend** is the subject of the ðæt-content clause. Preserve the claim that the Redeemer lives, rather than turning it into merely a future hope.

Cook X, XI.31.2

On mīnum flǣsce ic gesēo God, ic self and nā ōðer.
On mīnum flǣsce is a dative setting. **Gesēo** is a present form with the intended future reference. **Ic self** identifies the speaker emphatically; **nā ōðer** excludes another as the seer. It does not negate the speaker's seeing or mean seeing another god.

Cook X, XI.31.3

Hē wæs lǣred Godes willan tō dōnne.
The supplied **wæs lǣred … tō dōnne** is passive teaching with an inflected infinitive. The subject he is also the understood doer. **Godes** is the genitive possessor of accusative **willan**, the thing to be done. Ordinary willa and the modal willan are different lexemes; neither their spelling nor the passive licenses exchanging those roles.

Cook X, XI.31.4

Ne lǣd ðū ūs on costnunge, ac ālīes ūs fram yfele.
Ne lǣd ðū is a singular prohibition. **On costnunge** gives the temptation entered; **ālīes ūs fram yfele** requests release, with an accusative person and dative source of separation. The supplied yfele is abstract evil. Do not silently turn it into an identified evil person or make the recipient the source of separation.

Cook X, XI.31.5

Sīe ðīn nama gehālgod.
Sīe … gehālgod combines the passive and independent wish taught in Unit 7: "may your name be hallowed". **Ðīn nama** is the singular subject. The wording expresses a desired state, not a past report that the name was hallowed. A different grammatical wish order is possible here; the next item alone explicitly requires the verb first.

Cook X, XI.31.6

Geweorðe ðīn willa on eorðan swā-swā on heofonum.
Geweorðe is the requested prefixed verb, first in the sentence, in its supplied third-singular subjunctive wish use. **Ðīn willa** is the subject. **On eorðan** and **on heofonum** retain the earthly/heavenly settings linked by **swā-swā**. An unprefixed replacement or a noninitial verb would miss an explicit source control.

Cook X, XI.31.7

Nān cyning Engla næs swā micel swā Ælfred.
Nān … næs gives one negative statement. **Engla** is the genitive plural group, of the English; **swā micel swā Ælfred** is an equality standard denied for any king in the statement. The comparison concerns greatness, not numerical quantity, and the title's historical claim is simply being translated.

Cook X, XI.31.8

Hē feaht wið ðǣm Dęnum; hē dēmde his folc; hē worhte āwęndednessa of Lǣdene; hē wæs lēoðwyrhta.
The four predicates retain fighting, judging, translating and being a poet. **Wið ðǣm Dęnum** uses the given people's dative plural; **his folc** is the object judged; **āwęndednessa** is the translations made. The supplied **of Lǣdene** follows Cook's glossary spelling with long ǣ. The reading's exact **Lædene** remains a source spelling of its own. Do not regularize that reading silently to match this composed model.

Cook X, XI.31.9

His mōdor hātte Osburg, and his fæder Æthelwulf.
The supplied **hātte** is the special was-called form, matching hight. The second clause can leave that same verb understood or repeat it. Keep Osburg as the mother and Æthelwulf as the father; active "called someone" is not the required name relation.

Cook X, XI.31.10

Hē lifde twā and fīftig gēara.
Twā and fīftig gēara is the supplied complete expression for fifty-two years. Its higher-number construction takes genitive plural gēara. The task does not license inferring a new complete higher-numeral paradigm. The meaning is his life's duration, not his age at the reading lesson in the next item.

Cook X, XI.31.11

Hē leornode bēcrædinge æfter ðǣm ðe hē twęlf wintra eald wæs.
Bēcrædinge is what he learned. The supplied **æfter ðǣm ðe** introduces the past temporal clause; **twęlf wintra eald** is the supported age expression, with the number and genitive plural years. Preserve after: neither before nor a simple coincident when conveys the same relation.

Cook X, XI.31.12

His mōdor hæfde āne bōc Engliscra lēoða, ðe hēo gehēt swā hwæðrum hiere twēgra suna swā hīe ǣrest leornode.

Engliscra lēoða is genitive plural, the poems contained in the book. Relative **ðe** is the object of **gehēt**, with the mother as subject: the book which she promised. The entire **swā hwæðrum … swā … leornode** is supplied: the recipient form is dative by attraction while the chosen son performs the learning; **hīe** is the feminine book learned. The preterite subjunctive conveys the prospective choice. The regular internal-nominative/resumptive construction practised in C06 can express a defensible alternative if both clauses are fully reconstructed; do not generalize this exceptional dative into a rule for every relative subject.

Cook X, XI.31.13

Ælfred āscode hīe, Wilt ðū sōðlice ðā bōc ānum uncer sęllan, ðǣm ðe hīe ǣrest ongiett?

Hīe after āscode is the accusative person asked, following the Unit 13 government frame. **Ānum uncer** is one recipient selected from us two: dative ānum plus the personal genitive dual uncer. **Ðǣm ðe …** further identifies that recipient. The feminine book is **hīe**, object of **ongiett**; the person who understands is the relative subject. The agreeing possessive uncer, “our”, would not supply the stated partitive relation.

Cook X, XI.31.14

Asser, Ælfredes bisceop, wrāt āne bōc ðæs cyninges līfes.

Asser is the writer and ***Ælfredes bisceop*** his appositional description. **Āne bōc** is the accusative object; **ðæs cyninges līfes** is its content genitive, with the king as possessor of the life. The earlier taught bisceop is sufficient for the English bishop. A spatial of-phrase would not demonstrate Cook’s specified genitive relation.

D. Duties of the Rich toward the Poor

D01

The fault is withholding the speaker's goods and disregarding the gift entrusted to the rich man. The announced consequence is exclusion from that bounty and poverty in worldly life. The promise is hundredfold repayment of a good deed done in the speaker's name and eternal heavenly joy in return for gifts to the least. The speaker is the Savior; the initial addressee is the rich man, followed by an embedded gospel saying addressed to a plural audience.
Wlanc also permits proud as a lexical rendering; keep the passage's wealth and giving context. Do not introduce poor people as the subject of **mann gedēð**: that clause says one/a person does the good deed.

D02

Noldest is negative willan, preterite indicative second singular, governing plain **geðęncean**: "why were you unwilling to consider …?" Inside its content clause **ic wille** states the speaker's present or continuing intention to repay.
A past question does not force mechanical backshift of a proposition still presented as true. Wille does not become past merely because noldest is past.

D03

Swā-hwæt-swā names the thing given, whatever you give. The immediate recipient is **ānum of mīnum ðǣm lǣstum**, one of the least belonging to the speaker. **Mē** identifies the speaker himself as the recipient of that same gift. **Hit** resumes the thing, not the person receiving it.
"Whatever you give to one of the least of mine, you always give it to me" retains the two recipient descriptions. Supplying brothers as an explanatory gospel allusion is possible, but it is not a separate printed noun in this extract.

D04

Ānum is dative singular, the selected recipient. **Of** governs the dative-plural group **mīnum ðǣm lǣstum**. **Wið ðǣm** is the dative exchange expression, in return for that.
English of does not make the first group genitive in Old English. The second relation concerns repayment, not a person opposed to or standing beside the speaker.

D05

The Savior said to the rich man: "Why were you so withholding of my goods, which I gave you? Why did you disregard the gift that I gave you? I now remove you from my bounty, which I bestowed on you; then you will be poor in worldly life. Why were you unwilling to consider that I intend to repay each person for a good deed that one does in my name? I repay it to him a hundredfold, as it is declared and stated in my gospel: 'Whatever you give to one of the least of mine, you always give it to me, and I shall grant you eternal joy in heaven in return for that.'

The assigned opening argument ends here; the outer speech continues beyond it. The unmatched outer quotation follows that boundary. Future "I shall remove/repay" is also defensible for the presents in context. Bounty/distribution, poor/needy and eternal joy/delight are suitable alternatives. Retain the change from rebuke to promise, each recipient, the hundredfold repayment and the gospel quotation.

P. Alfred's Preface to Boethius

P01

The two methods are **word be worde**, word for word, and **andgiet of andgiete**, sense from sense. Various and manifold worldly cares troubled Alfred in mind and body; the troubles that befell his kingdoms are said to be hard to enumerate. After learning and translating the book into English prose, he made it into verse. He asks readers to pray for him and not blame him if they understand it more correctly than he could.

The cares constrain what he could explain; they are not a separate benefit bestowed by the translation. Preserve the sequence from the earlier translation to its later versification.

P02

In the requested order: **hē** before gebidde = the reader; **hine** after for = Alfred; **him** before ne wīte = Alfred; **hē** after gif = the reader; **hē** after ðonne = Alfred. Thus the reader may understand more correctly than Alfred could. A repeated masculine pronoun need not keep one referent throughout. Reading every hē as Alfred destroys the comparison and the request addressed to the reader.

P03

Ǣgðer ge on mōde ge on līchaman includes both settings, in mind and in body. In the next sentence **ðā bisga** is the plural subject and **sind** the finite verb. The first following relative clause describes the troubles that befell the kingdoms: its relative is subject of becōmon. The second describes the kingdoms that Alfred had received: its relative is object of underfangen hæfde, with hē as subject.

The two relatives have different antecedents and roles. Do not attach both to the troubles or interpret the kingdoms as the agent that received Alfred.

P04

Rihtlicor … ðonne compares the reader's more correct understanding with what Alfred could understand; ongietan/understand is recoverable after meahte. **Ne** negates wīte, blame, in the content of the request.

And him ne wīte coordinates with the prayer request after ðæt. It is not a separate past assertion that someone did not blame him. "Not find fault with him" is a natural alternative.

P05

King Alfred was the translator of this book, and translated it from book-Latin into English, as it is now done. At times he set word for word, at times sense from sense, as clearly and intelligibly as he could explain it amid the various and manifold worldly cares that often troubled him both in mind and in body. The troubles that befell in his days the kingdoms he had received are very hard for us to enumerate. Yet, after he had learned this book and translated it from Latin into English prose, he afterwards made it into verse, as it is now done. And now he asks, and entreats in God's name, each of those who may wish to read this book to pray for him and not blame him if the reader understands it more correctly than Alfred could; for every person must, according to the measure of his understanding and according to his leisure, speak what he speaks and do what he does.

Literary Latin/Latin, translator/interpreter, cares/occupations, and prose/discourse are defensible contextual choices. The translation must retain both methods, the impediments, the later versification, the charitable request and the differing comparison subjects. "He" in the last request may be retained in English if its changing reference remains clear. These are the preface's statements; the translation does not settle modern questions of authorship.

R. A Prayer of King Alfred

R01

Form	Mood and person	Essential meaning
gewissie	Present subjunctive, 2 singular	guide/direct me
gewissa	Imperative, 2 singular	guide me
gestaðela	Imperative, 2 singular	establish/settle my mind
gestranga	Imperative, 2 singular	strengthen me
āfierr	Imperative, 2 singular	remove lust and unrighteousness from me
gescield	Imperative, 2 singular	shield/protect me
tǣc	Imperative, 2 singular	teach me to do your will

The first action is requested in **ðæt ðū mē gewissie** after ic bidde. The six following forms are direct singular commands. Calling every form an imperative would miss the initial subordinate subjunctive; naming only headwords would not give the actual finite forms requested.

R02

The repeated **for** phrases appeal by or for the sake of God's mercy, the sign of the holy cross, Mary's virginity, Michael's obedience, and the saints' love and merits. In **for ðære hālgan rōde tācne**, **tācne** is the dative governed by for; **ðære hālgan rōde** is the dependent genitive, of the holy cross.
The syncretic feminine endings do not make rōde the directly governed noun. The exact source **gehīersumnesse** means obedience; translating it as intercession substitutes a different word.

R03

The first **bęt ðonne** sets the speaker's desert—what his conduct toward God has earned—as the standard. The second sets his own ability to know or determine what he needs as the standard. **Cunne** is present subjunctive in this petition's potential comparison.
"Better than I have deserved" and "better than I myself could know how" preserve the difference. Cook's optative note explains this occurrence; it is not a rule that every comparison takes a subjunctive.

R04

In the purpose clause, **ic** is the person who is to love **ðē**, the divine addressee. **Mæge** is present subjunctive first singular, governing plain **lufian**; the clause gives the intended purpose of the requested help and teaching.

In **Sīe ðē lof and wuldor**, the addressee receives the wished-for praise and glory. **Sīe** is the source's present subjunctive wish form. This is an independent concluding wish, not another subordinate purpose clause. "So that I may love you" and "May praise and glory be yours" preserve their different functions. Do not make God the actor of the first-person loving merely because he is addressed throughout the prayer.

R05

Lord, almighty God, Maker and Ruler of all created things, I ask you, by your great mercy, by the sign of the holy cross, by Saint Mary's virginity, by Saint Michael's obedience, and by the love of all your saints and their merits, to guide me better than my conduct toward you has deserved. Guide me according to your will and for the benefit of my soul, better than I myself could know how; establish my mind according to your will and for the benefit of my soul; strengthen me against the devil's temptations; remove from me filthy lust and every unrighteousness; shield me against my adversaries, visible and invisible; and teach me to do your will, so that I may love you inwardly above all things, with pure thought and a pure body. For you are my Creator, my Redeemer, my Help, my Comfort, my Trust and my Hope. May praise and glory be yours now and for ever and ever and ever, world without any end. Amen.

Guide/direct, establish/settle, shield/protect, and benefit/need of my soul are suitable alternatives. Keep all grounds of appeal, the distinction between the initial requested action and six commands, both comparisons, both occurrences of the soul's need, the purpose and the concluding praise. Mīnre sāwle is genitive dependent on ðearfe in both places; it does not name a separate recipient of the verb.

Sources and grading limits

Cook's 1895 *Exercises in Old English*, printed pp. 15–18 (one-based PDF 23–26), supplies the 50 numbered English prompts. The solutions are new compositions using the specified forms, established earlier teaching and the lesson's visible local help. A valid alternative is not rejected merely for

differing from a model string; explicit source or original-task directions still define the particular exercise target.

The readings follow Cook's 1895 second edition of *A First Book in Old English*: the opening argument of *Duties of the Rich toward the Poor*, printed 159.1–12 (PDF 175); the complete *Alfred's Preface to Boethius*, 162.1–17 (PDF 178); and the complete *A Prayer of King Alfred*, 163.1–18 (PDF 179). Individual lines are editorial counts anchored by the printed marginal line numbers. The learner retains all original source notes separately from modern explanations. The Duties extract does not include the continuation on pp. 160–161.

Complete morphology is limited by the lesson's stated senses and constructions. Reference forms, supplied phrases and the special attracted-case clause do not silently become independent production requirements. English translation alternatives should preserve the propositions and relations identified above, even when English needs a word that the Old English leaves understood.

UNIT 16

Answer key

The Old English composition models are new teaching material. The reading translation renders Cook's actual Old English. A model is one defensible answer: preserve the meaning, case relations, agreement, viewpoint and clause connections, while also observing each task's stated lexical, number and word-order targets. An otherwise valid alternative can miss a requested target.

The exact local helps remain available. A supplied phrase is not a test of unaided recall, even when some of its words have been taught. The form tasks use the selected tables; dictionary-given **iernan** and **nearu** are reference inputs, not extra vocabulary-recall tests. Accurate English explanations may differ in wording. N = nominative, G = genitive, D = dative, A = accusative.

Except where the exercise fixes an order, grammatical rearrangements that preserve the relationships are acceptable. Cook also attests such variants as dative **ðām** beside the selected **ðæm**. A spelling variant must be evidenced; it does not excuse a wrong case, person or tense. Distinguish ordinary negative concord from the specially supplied cessation clause in 36.3.

F. Forms and phrases

F01

1. āceorfan: present indicative, you singular. ācierfst — you cut off (present, singular).

2. āceorfan: preterite indicative, you singular. ācurfe — you cut off (past, singular).

3. āceorfan: preterite indicative, they. ācurfon — they cut off (past).

4. āceorfan: explain the stem relations. The present second singular has **ie** in **ācierf-**; the preterite second singular and plural use **ācurf-**, with **u**. Add second-singular **-e** or plural **-on** to that past stem. Keep the prefix **ā-** in every form.

5. forlēosan: present indicative, he. forlīest — he loses.

6. forlēosan: preterite indicative, you singular. forlure — you lost (singular).

7. forlēosan: preterite indicative, they. forluron — they lost.

8. forlēosan: explain the stem relations. The present third singular has **īe** and the contracted ending **-st**: **forlīest**. The preterite second singular and plural have **u** and **r**, hence **forlur-e**, **forlur-on**. Carrying present **s** into these past positions misses the stem alternation.

9. ðwēan: present indicative, he. ðwiehð — he washes.

10. ðwēan: preterite indicative, you singular. ðwōge — you washed (singular).

11. ðwēan: preterite indicative, they. ðwōgon — they washed.

12. ðwēan: explain the stem relations. The present third singular has **ðwieh-** plus **-ð**. Preterite second singular and plural have **ðwōg-**; their endings are **-e**, **-on**. The selected first/third singular **ðwōh** has **h**, so it cannot simply be used as the stem for all past positions.

13. iernan: present indicative, he. iernð — he runs.

14. iernan: preterite indicative, he. arn — he ran.

15. iernan: preterite indicative, they. urnon — they ran.

16. iernan: explain the stem relations. The selected stems are present **iern-**, singular preterite **arn**, and plural preterite **urn-**. Thus the requested third singular is **iernð**, the past third singular **arn**, and the past plural **urnon**. Neither past stem is formed by merely adding an ending to **iernan**.

These are the requested indicative positions, not a list of interchangeable principal parts. In particular, **ācurfe**, **forlure** and **ðwōge** are second singular; the corresponding **-on** forms answer they. The English present/past ambiguity of cut does not make the Old English forms interchangeable.

F02

1. smierwan: present indicative, I. smierwe — I anoint.

2. smierwan: present indicative, you singular. smierest — you anoint (singular).

3. smierwan: preterite indicative, she. smierede — she anointed.

4. bewęndan: present indicative, I. bewęnde — I turn.

5. bewęndan: preterite indicative, he. bewęnde — he turned.

6. plegian: preterite indicative, they. plegodon — they played.

7. behēafdian: preterite indicative, they. behēafdodon — they beheaded.

8. gefyllan: uninflected past participle. gefylled — fulfilled.

9. forgiefan: uninflected past participle. forgiefen — forgiven.

10. Explain the smierwan stem distribution shown by your answers. The selected present first singular retains **w**: **smierwe**. The present second singular and preterite omit it: **smierest**, **smierede**. All three retain the selected **ie** spelling. The distribution is part of this checked paradigm, not a reason to remove every w from every form.

11. Explain what the two bewęndan answers establish about identifying tense from spelling alone. Bewęnde represents both present first singular and preterite first/third singular. The two requested answers therefore coincide in spelling while differing in tense and person. A subject and context can distinguish them; the ending alone cannot.

Gefylled and **forgiefen** are past participles, not finite past verbs. Their uninflected use is requested here. In a finite anointing clause, a second-singular past would require **smieredest**, whereas the requested she form is **smierede**. Documented i/y variants of smierwan are valid spellings but differ from the selected ie series.

F03

1. āceorfan: one addressee. āceorf — cut off, addressed to one.

2. āceorfan: more than one addressee. āceorfað — cut off, addressed to several.

3. blissian: one addressee. blissa — rejoice, addressed to one.

4. blissian: more than one addressee. blissiað — rejoice, addressed to several.

5. smierwan: one addressee. smiere — anoint, addressed to one.

6. smierwan: more than one addressee. smierwað — anoint, addressed to several.

7. ārīsan: one addressee. ārīs — arise, addressed to one.

8. ārīsan: more than one addressee. ārīsað — arise, addressed to several.

9. forlǣtan: one addressee. forlǣt — leave, addressed to one.

10. forlǣtan: more than one addressee. forlǣtað — leave, addressed to several.

11. geswīcan: one addressee. geswīc — cease, addressed to one.

12. geswīcan: more than one addressee. geswīcað — cease, addressed to several.

13. ęfthweorfan: one addressee. ęfthweorf — return, addressed to one.

14. ęfthweorfan: more than one addressee. ęfthweorfað — return, addressed to several.

The singular commands do not all have the same ending: compare **blissa**, **smiere** and **ārīs**. The plural follows the selected present stem, including **smierwað** with w. These are ordinary command pairs; the separately taught shortened plural before following gē is not requested here.

F04

1. findan: present subjunctive, third singular. finde — that he find.

2. findan: present subjunctive, third plural. finden — that they find.

3. fēdan: present subjunctive, third singular. fēde — that he feed.

4. fēdan: present subjunctive, third plural. fēden — that they feed.

5. iernan: plain infinitive. iernan — to run, plain form.

6. iernan: inflected infinitive after tō (give the infinitive only). iernanne — to run, inflected form; give no separate tō here.

Present subjunctive singular **-e** contrasts with plural **-en**. Do not substitute indicative third-singular or plural endings. The infinitives have **-an** and **-anne**; neither is a present participle. In the last answer tō is already specified by the question, so the requested form is **iernanne** alone.

F05

1. nearu: masculine nominative singular. nearu — narrow, N masculine singular.

2. nearu: masculine accusative singular. nearone — narrow, A masculine singular.

3. nearu: masculine genitive singular. nearwes — narrow, G masculine singular.

4. nearu: masculine dative plural. nearwum — narrow, D masculine plural.

5. both sons, accusative. bēgen suna — both sons, A plural.

6. of both sons, genitive. bēgra suna — of both sons, G plural.

7. to both sons, dative. bæm sunum — to both sons, D plural.

8. Explain the nearu stem alternation shown by your answers. The masculine nominative singular ends in **-u**. The selected accusative has **-o-**

before **-ne**: **nearone**. Before **-es** and **-um** the stem appears as **nearw-**: **nearwes**, **nearwum**. Do not build all four forms from an unchanged nearu-.

9. Explain the grammatical number of both in the phrases. Bēgen has plural forms, although its meaning refers to two. **Bēgen**, **bēgra**, **bǣm** agree with the plural forms of **sunu**. It has no separate dual declension; with a dual personal pronoun such as **unc**, the appropriate form of both is still plural.

The three phrases require no article. **Suna** is syncretic: in the first phrase it is accusative plural, in the second genitive plural. **Bēgen** versus **bēgra** makes that case contrast visible. **Bǣm sunum** has dative plural agreement in both words.

A. Reference, clause structure and time

A01

1. First reading. The king went. Hē can refer back to the king, the subject of the first sentence.

2. Second reading. The son went. Hē can instead refer to the king's son. Both candidates are masculine singular; proximity to the pronoun alone does not settle the reference.

3. First explicit version. Se cyning ēode. Only the pronoun has been replaced; the action and tense remain unchanged.

4. Second explicit version. Se sunu ēode. The explicit nominative subject selects the son. The two readings and their corresponding rewrites may be presented in the opposite order.

The explicit noun phrases must be nominative subjects. A nearest-noun rule would erase the real ambiguity; replacing more than hē would also miss the restricted rewriting task.

A02

1. Sentence 1 translation. "The king saw the son go." "Saw the son walking" also conveys the perceived action; it need not introduce an Old English progressive construction.

2. Sentence 2 translation. "The king knew that the son went." "Had gone" is defensible if an anterior context is stated, but it is not forced by the spelling ēode alone.

3. Sentence 1 actor. Đone sunu is accusative masculine singular. It denotes the actor of the plain infinitive **gān** in the perception construction: the son, not the king, does the going.

4. Sentence 2 actor. Se sunu is nominative masculine singular, the subject of finite **ēode** inside the **ðæt** content clause. The subject's case is determined within that clause.

5. Verb-form comparison. Gān is a nonfinite plain infinitive. **Ēode** is a finite third-singular preterite of gān here; indicative and subjunctive share that spelling. A factual indicative or contextual report-subjunctive analysis is possible, provided the answer acknowledges that the surface alone does not distinguish them.

A03

1. Sentence 1 translation. "He said that the king was there." The king's presence is simultaneous with the saying, as the specified context requires.

2. Sentence 1 finite forms. Sægde: sęcgan, third-singular preterite indicative. **Wǣre:** wesan, third-singular preterite subjunctive in the reported clause. The subject se cyning rules out the homographic second-singular indicative analysis of wǣre.

3. Sentence 1 nonfinite forms. There is **no infinitive or participle**. Both sægde and wǣre are finite.

4. Sentence 1 construction and time. The content is a finite **ðæt** clause with reported **wǣre**. Its past form is interpreted from the past saying viewpoint; the context places the presence at that same time. It does not mean that the king had already ceased to be there. English backshift alone cannot determine the relative time.

5. Sentence 2 translation. "He said that the king had made the ship." The making is complete before the saying viewpoint.

6. Sentence 2 finite forms. Sægde: third-singular preterite indicative of sęcgan. **Hæfde:** third-singular preterite of habban, finite auxiliary in the content clause. The model selects the report subjunctive; its indicative spelling is identical, so a factual-indicative interpretation is also defensible with that limit explained.

7. Sentence 2 nonfinite form. Geworht is the uninflected past participle of **gewyrcean**. It combines with finite **hæfde** and accusative patient **ðæt scip**. It is not itself a finite verb.

8. Sentence 2 construction and time. The transitive **habban + past participle** group presents the making as complete at the past viewpoint. That complete group, together with the stated context, supports anterior "had made." Calling both verbs simply past would miss the relation between them; this is not a passive with the ship as subject.

9. Sentence 3 translation. "He said that the king intended to sing." "Would sing" is acceptable if it retains the intended later action rather than asserting its eventual fulfillment.

10. Sentence 3 finite forms. Sægde: third-singular preterite indicative of sęcgan. **Wolde:** third-singular preterite of willan, finite volitional verb in the content clause. The selected report-subjunctive analysis shares its spelling with the indicative; a contextual indicative report is possible if that syncretism is acknowledged.

11. Sentence 3 nonfinite form. Singan is the plain infinitive complement of **wolde**. Its understood actor is the king.

12. Sentence 3 construction and time. Willan + plain infinitive expresses volition or intention. In the stated context, singing is still intended and lies after the saying. Neither wolde nor the English word would proves that the singing happened. This contrasts with simultaneous wǣre in sentence 1 and completed geworht hæfde in sentence 2.

C. Short compositions

C01

1. Speech and command. Se cyning sægde his suna: 'Sęle mē ðā bōc.'

The king said to his son, "Give me the book." **His suna** is the dative speech recipient; **sęle** is a singular command. **Mē** is the recipient of giving and **ðā bōc** its accusative object.

2. Executed action. Se sunu sealde him ðā bōc.

The son gave the book to the king. **Sealde** narrates the completed action; **him** remains dative. An explicit **ðǣm cyninge** would remove reference ambiguity, but would replace the recipient pronoun that the next part asks you to explain.

3. Recipient reference. Quoted **mē** and narrative **him** both denote the king. The first is first person because the king is speaking; the second is third person because the narrator is describing him. Changing the pronoun's person need not change its referent.

C02

1. Statement 1. Ic cann ðone mann. — "I know that man." The personal object is accusative, and cunnan means acquaintance here. Another evidenced knowing verb could be valid language, but the prompt specifically requests cunnan.

2. Statement 2. Ic cann singan. — "I know how to sing." The plain infinitive supplies the learned skill; no separate translation of English how is required in this frame.

3. Statement 3. Ic wāt ðæt hē hēr is. — "I know that he is here." Witan takes a finite content clause; **hē** is its nominative subject. The model presents the content factually with indicative is. A subjunctive needs an appropriate contextual interpretation, not an automatic rule that every dependent clause must have one.

4. Complement comparison. The first complement is an **accusative person**, the second a **plain infinitive**, and the third a **finite ðæt clause**. These examples contrast particular senses and constructions. They do not establish a universal persons-versus-facts division: witan can also take a personal object, as in Cook 35.7.

C03

1. Whole comparison. Đā męnn plegodon wel; se cyning plegode bęt ðonne hīe dydon.

"The men played well; the king played better than they did." **Plegodon** and **dydon** are plural; **plegode** is singular. **Bęt** compares the playing, and ðonne introduces its comparison clause.

2. Recovered action and agreement. Dydon stands for **played** and agrees with **hīe**, the men. Its subject is not the singular king. Repeating **plegodon** could make a grammatical comparison, but would miss the expressly requested substitute-dōn target. This use does not create modern English do-support.

Cook XII, XIII.32

Cook XII, XIII.32.1

Ic grēte ēow ealle.
Meaning: I bid all of you farewell.
Grēte uses the farewell sense of grētan with accusative **ēow ealle**. Ealle agrees with the persons addressed; it is not an adverb meaning entirely. This direct farewell meets the named lexical target without adding a separate bidding construction.

Cook XII, XIII.32.2

Đā hīe rēowon swilce twēntig furlanga oððe ðrītig, ðā gesāwon hīe Hǣlend uppan ðǣm sǣ gān.
Meaning: When they had rowed about twenty or thirty furlongs, they saw Jesus walking on the sea.
Rēowon is a simple preterite with anterior meaning supplied by the sequence; English had does not require an Old English perfect here. **Hǣlend** is the accusative actor of **gān**, and the infinitive stays last as directed. The supplied approximation and quantity phrase retains both twenty and thirty; **uppan ðǣm sǣ** uses dative agreement with the selected masculine sea noun. "Walking" in English does not make gān a participle.

Cook XII, XIII.32.3

Hē ārās and bebēad ðǣm winde, and cwæð tō ðǣm sǣ, Geswīc.
Meaning: He arose, commanded the wind, and said to the sea, "Cease."
All three actions remain: **ārās**, **bebēad**, **cwæð**. The wind is the dative recipient **ðǣm winde**, while the sea follows **tō**. **Geswīc** is the singular absolute command to cease; it needs no genitive complement here. Substituting an accusative wind or treating the command as a past statement changes the structure.

Cook XII, XIII.32.4

Se wind geswāc, and wearð miclu smyltnes.
Meaning: The wind ceased, and a great calm arose.
Geswāc is absolute cessation. **Wearð** means came about, with nominative **miclu smyltnes**; there is no participle and therefore no passive auxiliary construction. **Miclu** is the selected feminine nominative strong form. The English indefinite article is omitted as instructed.

Cook XII, XIII.32.5

Đū hīerst his stefne, and ðū ne wāst hwanon hē cymð, ne hwider hē gǣð.
Meaning: You hear his voice and do not know where he comes from or where he goes.
Wāst is the selected second-singular present of witan; separate **ne** negates it. The two dependent questions retain **hwanon … cymð** and **hwider … gǣð**. Use the uncontracted form supplied by the taught system; an invented negative contraction does not improve compliance. The voice **stefne** is accusative object of hear.

Cook XII, XIII.32.6

Hē geseah twēgen brōðor hiera nętt on ðone sǣ sęndan; hīe wǣron fisceras.
Meaning: He saw two brothers casting their net into the sea; they were fishermen.
Twēgen brōðor is the accusative actor phrase of perception **sęndan**. Their **nętt** is the singular object sent; **on ðone sǣ** gives the goal. The finite **wǣron** belongs to the second clause. A finite sending clause could express related content, but it would replace the selected perception-infinitive construction.

Cook XII, XIII.32.7

And hē sægde him, Cumað æfter mē, and ic dō ðæt git bēoð manna fisceras; and hīe sōna forlēton hiera nętt.
Meaning: He told them, “Come after me, and I will make the two of you fishers of men”; they immediately left their nets.
Him is the dative recipient of the saying. The result is a finite **ðæt** clause: nominative dual **git** takes plural **bēoð**, and **fisceras** is its nominative predicate. Do not replace git with an accusative object of dōn; this is the taught make-that construction. The model omits a will word as required, retains genitive **manna**, and uses plural **nętt** without an invented -u ending. The following-person phrase and immediately remain explicit.

Cook XII, XIII.32.8

Gif ðīn hand oððe ðīn fōt ðē æswicað, āceorf hit of, and weorp fram ðē; bętere ðē is ðæt ðū healt on līf gā, ðonne ðū twā handa and twēgen fēt hæbbe and on ēce fȳr sīe worpen.
Meaning: If your hand or foot causes you to stumble, cut it off and cast it away; it is better for you to enter life lame than to have two hands and two feet and be cast into eternal fire.
Singular **æswicað** agrees with the alternatives hand or foot; **ðē** is the offended person, accusative. **Hit** resumes the alternative body part, and **of** is the off particle. The second command omits it as directed. In the supplied better-clause, **ðē** is dative; keep **ðæt** before the first complement, omit it after **ðonne**, and retain **gā**, **hæbbe**, **sīe worpen**. The final words are a passive; worpen is the selected prior participle.

Cook XII, XIII.32.9

Gif hwilc mann hæfð hund scēapa and forlīest ān of ðǣm, ne forlætt hē ðā nigon and hundnigontig on muntum and gǣð and sēcð ðæt ðe forwearð?
Meaning: If a man has a hundred sheep and loses one, does he not leave the ninety-nine in the mountains and go to seek the one that was perishing?
Keep the five present actions distinct: **hæfð**, **forlīest**, **forlætt**, **gǣð**, **sēcð**. The final **forwearð** is a preterite in the identifying relative; the English was perishing does not require a progressive auxiliary. **Hund scēapa** has the supplied quantity construction, and **ān of ðǣm** selects one from the set. The question keeps **ne** but has no equivalent of auxiliary does.

Cook XII, XIII.32.10

And gif hit gelimpð ðæt hē hit finde, sōðlice ic ēow sęcge ðæt hē swīðor ofer ðæt blissað ðonne ofer ðā nigon and hundnigontig.
Meaning: If he happens to find it, truly I tell you that he rejoices more over that sheep than over the ninety-nine.
The first **hit** in the supplied **gif hit gelimpð** is impersonal; the second is the sheep. **Finde** is present subjunctive, not indicative findað. **Swīðor** compares the degree of rejoicing; both objects retain **ofer** with accusative. Replacing the comparison with a statement of preference would lose this use of more.

Cook XII, XIII.32.11

Đonne hē hām cymð, hē cleopað his frīend and his nēahgebūras tōgædere and cwið, Blissiað mid mē, for-ðon-ðe ic mīn forloren scēap fand.
Meaning: When he comes home, he calls his friends and neighbours together and says, “Rejoice with me, because I found my lost sheep.”
Hām expresses homeward motion without an added preposition. Singular **cleopað** summons the friends; plural **Blissiað** addresses them. The quoted first-singular preterite is the course-selected **fand**, omitting have as directed. **Forloren** is strong accusative neuter singular with **mīn ... scēap**; the participial base does not license an arbitrary -e ending. The documented first-singular funde is a linguistic variant, but differs from the selected cell.

Cook XII, XIII.33

Cook XII, XIII.33.1

And, intō ðǣm hūse gangende, hīe fundon ðæt bearn mid Marian his mēder.
Meaning: Going into the house, they found the child with Mary, his mother.
The whole **intō ðǣm hūse gangende** phrase is supplied; gangende accompanies the plural actors, while **fundon** is finite. **Bearn** is the accusative child. **Mid Marian his mēder** retains the supplied name form and the dative relation, with his mother identifying Mary. Do not turn the going into an unrelated extra finite subject.

Cook XII, XIII.33.2

Ārīs, and nim ðæt bearn and his mōdor on niht, and flēoh tō Egypta lande, and bēo ðǣr oð ðæt ic ðē sęcge.
Meaning: Arise, take the child and his mother by night, flee to the land of the Egyptians, and remain there until I tell you.
Preserve all the commands and both people taken. **Ārīs**, **nim**, **flēoh**, **bēo** address one person. The supplied **on niht** gives the time, while **tō Egypta lande** gives the destination. **Sęcge** is the finite subjunctive in the until clause and must stand last there; it is not another command to the hearer.

Cook XII, XIII.33.3

Hē ðā ārās and nōm ðæt bearn and his mōdor on niht and fōr on Egypta land, ðæt gefylled wǣre ðæt fram dryhtne ðurh ðone wītgan cweden wæs, Of Egyptum ic mīnne sunu cleopode.
Meaning: He arose, took the child and his mother by night, and journeyed into the land of the Egyptians, so that what the Lord spoke through the prophet might be fulfilled: “From the Egyptians I called my son.”
The selected narrative forms are **ārās**, **nōm**, **fōr**. **On Egypta land** is a goal, unlike the time expression on niht. The purpose has **gefylled wǣre**, with no separate might word; the thing fulfilled is the spoken utterance. **Fram dryhtne** and **ðurh ðone wītgan** retain their distinct cases. The quoted **cleopode** is first singular without have. A separately evidenced travel verb could express journeyed, but no new fēran system is required by this unqualified action.

Cook XII, XIII.33.4

Hwæs magon hīe biddan?
Meaning: What can they ask for?
Hwæs is genitive: the thing requested is governed by **biddan**. **Magon** is plural and governs the plain infinitive. Do not substitute accusative **hwæt** for the genitive thing requested merely because English what has no visible case ending. The same request frame can also take an accusative person, as in 36.8.

Cook XII, XIII.33.5

Sēo sunne gīemð ðæs dæges.
Meaning: The sun rules over the day.
Gīemð is singular, and its rule/govern sense takes genitive **ðæs dæges**. This is lexical government, not a general rule that everything following an English over must be genitive. The already taught gīeman frame meets Cook's §156f target.

Cook XII, XIII.33.6

Hīe ne wēndon nāhtes būtan dēaðes selfes.
Meaning: They expected nothing except death itself.
Wēndon means expected, with a genitive thing expected: **nāhtes**. The supplied exceptive phrase keeps **dēaðes selfes** in the corresponding genitive relation. **Ne** participates in the negative statement. A finite that-clause is another construction of wēnan, but does not explain the genitives required here.

Cook XII, XIII.33.7

Đū geswīcst ðīnes weorces.
Meaning: You will cease from your work.
Geswīcst is present second singular with the future meaning supplied by context. **Ðīnes weorces** is the genitive complement of cease. A willan paraphrase may express futurity elsewhere, but the selected simple present already fulfils the task; adding an English-shaped from phrase would miss the requested genitive government.

Cook XII, XIII.33.8

Wēn is ðæt hē frēond finde.
Meaning: Perhaps he will find a friend.
The taught **Wēn is ðæt** pattern expresses expectation or possibility, followed by present subjunctive **finde**. **Frēond** is the accusative object found. The English will is not translated automatically by willan, which would introduce an intention not required by this model.

Cook XII, XIII.33.9

Hē sægde him, Ic wille gān on fiscnoð; hīe sægdon, And wē willað gān mid ðē.
Meaning: He said to them, "I will go fishing." They replied, "And we will go with you."
The quotation changes from **ic wille** to **wē willað**, retaining each speaker's own viewpoint. The supplied activity phrase is **on fiscnoð**; the companions follow **mid** in **mid ðē**. Do not leave the second willan singular merely because the first quotation was singular.

Cook XII, XIII.33.10

Hīe ēodon ūt and ēodon on scip and ne fēngon nāwiht on ðære niht.
Meaning: They went out, went into a ship, and caught nothing that night.
Both movements and the failed catch remain finite past events. **On scip** is the goal, whereas **on ðære niht** is the supplied time expression. **Ne … nāwiht** gives one negative meaning, not two cancelling negatives. The uninflected-looking **niht** is the selected dative here; do not invent nihte to make its case more visible.

Cook XII, XIII.34

Cook XII, XIII.34.1

Swā hwā swā ðū sīe, ne forlæt mē.
Meaning: Whoever you are, do not forsake me.
Swā hwā swā introduces free choice with subjunctive **sīe**. **Ne forlæt** is a singular negative command and takes accusative **mē**. The -e of sīe does not make it an infinitive, and the negative command needs no auxiliary equivalent to English do.

Cook XII, XIII.34.2

Gif ðū nānne ne finde ðe ðē fēde, ęfthweorf hider.
Meaning: If you find nobody who will feed you, return here.
Nānne is the possible person found, with negative **ne**; hypothetical **finde** is present subjunctive. The relative **ðe ðē fēde** describes a possible provider, so fēde is also subjunctive, with the fed person accusative. Singular **ęfthweorf** is the command to return. The two subjunctives express this context; they are not a universal translation of English will.

Cook XII, XIII.34.3

Genyhtsumien mīna bēc unc bǣm.
Meaning: Let my books suffice for both of us.
The complete **Genyhtsumien ... unc bǣm** construction is supplied. **Mīna bēc** is nominative plural, so the optative/subjunctive is plural **genyhtsumien**. **Unc** is dual dative; **bǣm** is dative plural because both has no separate dual table. Cook's verified noun is books; the cited reading has possessions and provides the construction, not a replacement for the exercise noun.

Cook XII, XIII.34.4

Bēgen ðā cnapan sindon wel gelærede.
Meaning: Both boys are well educated.
Bēgen ðā cnapan and predicate **gelærede** agree in the masculine plural. Here gelæred is the taught lexical adjective educated or trained. Do not infer a separately assigned finite gelæran conjugation from its participial origin. Well trained is an appropriate contextual rendering of the same adjective.

Cook XII, XIII.34.5

Hīe wæron bēgen rihtwīse beforan Gode.
Meaning: They were both righteous before God.
Bēgen and **rihtwīse** are plural predicates referring to hīe; **wæron** supplies the past tense. **Beforan Gode** has a dative complement. Translating both by a dual personal pronoun would change they into we two or you two rather than supplying the required agreeing word.

Cook XII, XIII.34.6

Ic hālsie ðē ðurh ðone libbendan God ðæt ðū ūs sęcge hwæðer ðū sīe Crīst, Godes Sunu.
Meaning: I solemnly charge you by the living God to tell us whether you are Christ, the Son of God.
Hālsie takes accusative **ðē** and the oath phrase **ðurh ðone libbendan God**. That participial adjective is supplied as a weak accusative masculine form. **Ūs** is the dative recipient of telling; **sęcge** belongs to the request clause. **Hwæðer** introduces the dependent whether-question, with **sīe**. Do not confuse the charged person's accusative with the speech recipient's dative.

Cook XII, XIII.34.7

Ic ēow sęcge, Æfter ðissum gē gesēoð Mannes Sunu on ðā swīðran hand Godes mægenðrymmes sittan and on heofones wolcnum cuman.
Meaning: I tell you: after these things you will see the Son of Man sitting at the right hand of God's majesty and coming in the clouds of heaven.
One accusative actor, **Mannes Sunu**, controls both perception infinitives **sittan** and **cuman**. English sitting/coming may therefore be rendered without participles. The supplied right-hand phrase retains Cook's expressly required accusative **on ðā swīðran hand**; do not change it to a motion meaning just to explain the case. **On heofones wolcnum** is a separate locative phrase. The model omits the specified things and articles.

Cook XII, XIII.34.8

Sīe inc bǣm æfter incrum gelēafan.
Meaning: May it be for you two according to your faith.
Sīe expresses the wish without inserting the omitted it. **Inc** is dative dual, while **bǣm** agrees in its available dative plural form. **Incrum** preserves the dual possessive reference. The supplied **æfter … gelēafan** means according to, rather than following someone in space.

Cook XII, XIII.34.9

Sōðlice Mannes Sunu is tō cumanne on his Fæder wuldre, and ðonne āgylt hē ælcum be his āgnum weorce.
Meaning: Truly the Son of Man is to come in his Father's glory and will then reward everyone according to his own work.
Both **is tō cumanne** and the complete reward clause are visibly supplied. The former is this bounded be-to construction, not merely the previously taught purpose after a coming verb. **Cumanne** is the selected form; manuscript evidence also has cumenne. **C06:** Cook's printed hint **āgyltan,113** is corrected to **āgyldan**, strong III, for reward/repay. Its contracted third singular **āgylt** is supported, and **ælcum** is the dative recipient. Keep the original hint identifiable, but do not manufacture a weak reward form from it. No shall word is added.

Cook XII, XIII.34.10

Ðonne Crīst cymð, ðonne ne wāt nān mann hwanon hē is.
Meaning: When Christ comes, no one then knows where he is from.
The temporal pair is **ðonne … ðonne**. **Ne wāt nān mann** is a single negative statement; wāt is the selected third-singular present, with a dependent whence-question. A future interpretation of comes does not require a separate future auxiliary or an unassigned contracted negative-witan form.

Cook XII, XIII.34.11

Hælend cleopode and lærde on ðæm temple and cwæð, Mē gē cunnon, and gē witon hwanon ic eom; and ic ne cōm of mē selfum, ac sē is sōð ðe mē sęnde, ðone gē ne cunnon.
Meaning: Jesus cried out and taught in the temple: "You know me and where I am from. I did not come from myself; the one who sent me is true, and you do not know him."
The model retains crying, teaching and saying. **Cunnan** has an accusative person; **witan** has the whence-content. In **sē … ðe mē sęnde**, the sender is nominative subject; in **ðone gē ne cunnon**, the same person is accusative object. **Of mē selfum** keeps the dative self-phrase after of. The supplied predicate **sōð** describes the sender as true; it is not an adverb modifying sent.

Cook XII, XIII.34.12

Gē hine ne cūðon; ic hine cann, and gif ic sęcge ðæt ic hine ne cunne, ic bēo ēow gelīc; ac ic hine cann, and ic healde his sprǣce.
Meaning: You have not known him; I know him. If I say that I do not know him, I will be like you; but I know him and keep his saying.
The first clause uses the requested preterite **cūðon** without have. Reported **cunne** is subjunctive and final in its clause; the surrounding **cann** forms are indicative. **Bēo** expresses the future without shall, and **ēow** is dative with like. **Healde his sprǣce** uses keep/observe with an accusative saying, rather than the earlier physical hold sense.

Cook XII, XIII.34.13

Gif ic mē selfne wuldrie, nis mīn wuldor nāwiht; mīn Fæder is sē ðe mē wuldrað, be ðǣm gē cweðað ðæt hē ēower God sīe.
Meaning: If I glorify myself, my glory is nothing; my Father is the one who glorifies me, and you say concerning him that he is your God.
Mē selfne is accusative reflexive. The following negative clause begins with **nis**, satisfying the verb-first control, and **nāwiht** is its supplied predicate. **Be ðǣm** means concerning whom. The final reported **sīe** is subjunctive. Cook allows a g-containing weak-II spelling series, but the selected first singular is **wuldrie**, not an unnoticed mixture of spellings.

Cook XII, XIII.35

Cook XII, XIII.35.1

Fōh ðisne ðoðor.
Meaning: Catch this ball.
Fōh is the singular command. **Ðisne ðoðor** is accusative masculine singular; the demonstrative agrees with the ball's grammatical gender. The source's rare ball word is a noun, not a finite verb inferred from its ending.

Cook XII, XIII.35.2

Hwā fēng ðone blacan ðoðor?
Meaning: Who caught the black ball?
Hwā is the subject and **fēng** the third-singular preterite. The object **ðone blacan ðoðor** has weak accusative masculine adjective agreement after the demonstrative. Present catch and preterite caught require different fōn stems; the question does not change that distinction.

Cook XII, XIII.35.3

Gā ðæs weges ðe ðū cōme.
Meaning: Go along the way by which you came.
The route is genitive **ðæs weges**, the pattern directly encountered in the reading. **Gā** is the singular command; **cōme** is preterite indicative second singular in the relative clause. Its final -e alone does not make it subjunctive. The selected genitive target should not be replaced by an unverified accusative route merely because English has no preposition.

Cook XII, XIII.35.4

Ic ne plegode næfre bęt ðonne ic tō-dæg dyde.
Meaning: I never played better than I did today.
Plegode expresses ordinary playing. **Dyde** substitutes for that same action and has first-singular agreement. **Bęt … ðonne** compares actions, with **tō-dæg** at the current speaker's viewpoint. A repeated playing verb could form a valid comparison, but the selected model practises substitute dōn. **Ne … næfre** is one negative assertion.

Cook XII, XIII.35.5

Hēo ne sang næfre bęt ðonne hēo nū dyde.
Meaning: She never sang better than she did now.
Dyde repeats the singing action, this time in the third singular. Keep **nū**, the now of the narrated viewpoint, rather than mechanically changing it to then. The comparative is adverbial **bęt**. Repeating sang could convey the comparison, but would not display the selected substitute-action pattern.

Cook XII, XIII.35.6

Ðrīwa ic ðolode forlidennesse; āne niht and ānne dæg ic wæs on ðissum sǣ.
Meaning: Three times I suffered shipwreck; I was in this sea for a night and a day.
Ðrīwa counts the sufferings; **forlidennesse** is what was suffered. The time extents **āne niht** and **ānne dæg** are accusative. **On ðissum sǣ** is locative dative with the selected masculine noun. Do not make a night and a day two new subjects of wæs.

Cook XII, XIII.35.7

Ic wiste sumne mann sē ðe wæs ōð ðone ðriddan heofon lǣded and ðǣr hīerde ðā word ðe nān eorðlic mann ne mōt sprecan.
Meaning: I knew a certain man who was carried to the third heaven and heard there words that no earthly man may speak.
Wiste takes the accusative person **sumne mann**; knowing people is not restricted to cunnan. **Wæs … lǣded** is a passive carrying event, with the supplied **ōð** endpoint. The relative hearer is the same man. In the final clause **nān … ne mōt** expresses prohibition, and **sprecan** is its plain infinitive. Translating it as a positive permission would reverse the meaning.

Cook XII, XIII.35.8

Ēalā, hū nearu is ðæt geat and se weg ðe tō līfe lǣtt, and swīðe fēawe sindon ðe ðone weg findað.
Meaning: How narrow is the gate and the way that leads to life, and very few are those who find the way.
The complete Old English **hū nearu is ðæt geat and se weg** is supplied with its source-shaped singular agreement. It treats the figurative route as a unit and is not a rule for every coordinated subject. **Lǣtt** stays final in its relative clause. Supplied **fēawe** is plural and takes **sindon**; **swīðe** preserves very, and the requested there is omitted.

Cook XII, XIII.35.9

Hīe cumað tō ēow on scēapa gegierelum, ac innan hīe sindon wulfas.
Meaning: They come to you in sheep's garments, but inwardly they are wolves.
Cumað is a present plural statement, not a command. **On scēapa gegierelum** is the supplied clothing expression: scēapa is genitive plural and gegierelum dative plural. **Innan** supplies the inward contrast. Treating on as a destination here would change clothes into a place they enter.

Cook XII, XIII.35.10

Đā hē ðære byrig geate nēalæcte, ðā wæs ðær dēad mann boren.
Meaning: When he approached the city gate, a dead man was being carried there.
The first **ðā** means when, the second then, and **ðær** means there. **Nēalæcte** governs dative **geate**; **ðære byrig** is its genitive city dependent. **Wæs … boren** is passive **beran**, as requested. English being carried is a natural rendering of that event; it does not require an additional Old English progressive verb.

Cook XII, XIII.35.11

Ic gesēo mæden geond ðā strǣte iernan.
Meaning: I see a girl running along the street.
Accusative **mæden** is the actor of perception infinitive **iernan**. **Geond ðā strǣte** takes accusative and identifies the space traversed. The model uses the selected Cook headword mæden, without an added g, and the accusative strǣte rather than the nominative strǣt.

Cook XII, XIII.35.12

Smiere mē mid ęle.
Meaning: Anoint me with oil.
Smiere is the selected singular command, with accusative **mē** and material **mid ęle**. The spelling **smire** is independently attested and can be valid Old English; the selected table keeps ie. Do not omit the singular -e merely because other commands such as dēm lack it.

Cook XII, XIII.35.13

Sęllað ūs of ēowrum ęle.
Meaning: Give us some of your oil.
The selected model addresses several people: **Sęllað** and **ēowrum** agree in that reference. **Ūs** is the dative recipient, and supplied **of ēowrum ęle** is partitive, not departure from a place. For one addressee, the already taught singular command and possessive give **Sęle ūs of ðīnum ęle**, using the same partitive help. Keep command and possessive reference consistent. This is an alternative to the selected plural model; the English itself does not spell out singular versus plural you.

Cook XII, XIII.35.14

Gif se Sunu ēow ālīest, gē bēoð sōðlice frige.
Meaning: If the Son frees you, you will indeed be free.
Ālīest is third singular; **ēow** is the plural person freed, and **gē bēoð** preserves that plural reference without shall. The predicate plural **frige** is supplied and directly supported. The dictionary headword frēo is not the selected plural answer.

Cook XII, XIII.36

Cook XII, XIII.36.1

Ne dēme gē be ansīene, ac dēmað rihtne dōm.
Meaning: Do not judge according to appearance; judge rightly.
Before the following subject **gē**, the selected plural command is shortened **dēme**. In the second clause, without a following subject pronoun, the ordinary plural is **dēmað**. Both remain commands to several people. **Be ansīene** is the supplied according-to expression; **rihtne dōm** is the accusative cognate object, "right judgment." Cook's positional target is specific; do not claim that a different historical variant could never occur.

Cook XII, XIII.36.2

Đā bewęnde hē him tō ðæm wīfe and cwæð, Gesiehst ðū ðis wīf? Ic ēode intō ðīnum hūse; ðū ne sealdest mē wæter tō mīnum fōtum; ðēos ðwōh mīne fēt mid hiere tēarum.
Meaning: He turned to the woman and said, "Do you see this woman? I entered your house; you gave me no water for my feet, but she washed my feet with her tears."
Bewęnde hē him has the specifically taught dative reflexive, and **tō ðæm wīfe** is the goal. **Gesiehst** is the selected second-singular form. The supplied feminine **ðēos** refers to the woman as a person despite the grammatical neuter wīf. **Đwōh** is third-singular past; **mīne fēt** is its accusative object and **mid hiere tēarum** the washing liquid. Keep the separate supplied intended-use phrase **wæter tō mīnum fōtum**; it is not another movement destination.

Cook XII, XIII.36.3

Đū mē coss ne sealdest; ðēos, siððan ic inēode, ne geswāc ðæt hēo mīne fēt ne cyste.
Meaning: You gave me no kiss; since I entered, this woman has not stopped kissing my feet.
The first clause ends in **sealdest**, as directed, and contains no indefinite article. **Inēode** is the selected first-singular past of ingān. The entire **ne geswāc ðæt hēo mīne fēt ne cyste** is supplied from the attested negative cessation construction. Both negatives belong to it: the inner ne does not mean she refused to kiss. Do not add a have auxiliary or invent a general rule for every complement of cease.

Cook XII, XIII.36.4

Mīn hēafod ðū mid ęlum ne smieredest; ðēos smierede mīne fēt mid sealfe.
Meaning: You did not anoint my head with oils; this woman anointed my feet with ointment.
Keep the instructed plural **ęlum** and singular **sealfe**. Second-singular **smieredest** has -st; third-singular **smierede** does not. The objects hēafod and fēt are accusative, and both materials follow mid in the dative. Attested i/y spellings can be linguistic alternatives, but cannot remove the person distinction.

Cook XII, XIII.36.5

For-ðon ic ðē sęcge, Maniga synna hiere sindon forgiefen, for-ðon-ðe hēo mē swīðe lufode.
Meaning: Therefore I tell you that many sins are forgiven her, because she loved me greatly.
Synna is the plural passive subject, **hiere** the dative person forgiven, and **forgiefen** an uninflected predicative participle. It is not a finite plural verb. The opening supplied **For-ðon** means therefore; **for-ðon-ðe** introduces the reason. Keep **lufode** last in that clause and retain swīðe. Merely knowing forgiefan as give/grant would not establish this forgiveness sense.

Cook XII, XIII.36.6

Læs lufað ðæm ðe læs forgiefen is.
Meaning: The person to whom less is forgiven loves less.
The complete compressed relative sentence is supplied. The first **læs** is the prompt's neuter accusative degree expression, "less" with loves. The second **læs** is nominative neuter singular: the smaller amount that is forgiven. **Ðæm ðe** is dative within the forgiveness relation, with the matrix subject understood. This is not evidence that lufian normally takes a dative subject. An expanded relative could express the meaning, but would replace the supplied compact target.

Cook XII, XIII.36.7

Hit ne ālīefð ðē hīe tō wīfe habban.
Meaning: You are not permitted to have her as your wife.
The whole permission frame is supplied: impersonal **hit ne ālīefð**, dative permitted person **ðē**, and **hīe** as accusative object of **habban**. **Tō wīfe** expresses her role as wife, not a destination. The English is is omitted because the finite permitting verb already supplies the predicate; do not add wesan.

Cook XII, XIII.36.8

Đā gehēt hē mid āðe hiere ðæt tō sęllanne, swā hwæs swā hēo hine bǣde.
Meaning: He then promised with an oath to give her whatever she asked him for.
Use the supplied promise/free-choice bridge. **Hiere** is the dative giving recipient and resumptive **ðæt** the accusative thing given. Inside **swā hwæs swā**, biddan requires genitive **hwæs** for the thing requested and accusative **hine** for the person asked. **Bǣde** is preterite subjunctive; the omitted English should does not become another verb. One English whatever cannot force the same case into two different constructions.

Cook XII, XIII.36.9

Đā cwæð hēo, fram hiere mēder myngod, Sęle mē on disce Johannes ðæs fuluhteres hēafod.
Meaning: Prompted by her mother, she said, "Give me John the Baptist's head on a dish."
Supplied **myngod** is an uninflected predicative participle; **fram hiere mēder** supplies its agent. Singular **Sęle** has dative **mē** and accusative **hēafod**. Supplied **Johannes** is genitive here, with matching **ðæs fuluhteres**. The primary name spelling has initial I; the declared J follows Cook's headword. That spelling choice is separate from case.

Cook XII, XIII.36.10

Đā āsęnde hē and behēafdode Johannem on ðǣm cwearterne.
Meaning: He then sent and beheaded John in the prison.
The source leaves the sending patient unexpressed; the model preserves that bounded absolute **āsęnde**. **Behēafdode** is third-singular past and takes supplied accusative **Johannem**. The prison is locative **on ðǣm cwearterne**. Do not keep the name in its dictionary nominative merely because English John shows no case ending, or silently replace the active beheaded with a different command construction.

Cook XII, XIII.36.11

And man brōhte his hēafod on disce.
Meaning: Someone brought his head on a dish.
Indefinite **man** supplies the unnamed human agent, and **brōhte** is third-singular past. **His hēafod** is accusative object; **on disce** identifies the dish carrying it. English one means someone here, not a numeral modifying the head. This is a separate final narrated event and must not be omitted.

R. The gymnasium scene

R01

1. Whole translation. After these words he went along the way that had been shown to him, until he reached the city gate and entered there. While he was thinking whom he might ask for help in sustaining his life, he saw a naked boy running along the street. The boy was anointed with oil and girded with a cloth, and carried in his hand the equipment for young men's play belonging to the baths. He called out in a loud voice and said: "Listen, citizens! Listen, strangers, free and enslaved, noble and lowborn! The baths are open."

When Apollonius heard this, he took off the half-cloak that he was wearing and went into the bathing place. As he observed each of them at their activity, he looked for his equal, but could not find him there in the crowd. Then suddenly Arcestrates, king of that whole country, arrived with a large company of his men and entered the bath. The king began playing ball with his companions. Apollonius joined in the king's game, as God willed; running, he caught the ball and, after striking it with swift speed, sent it back to the king who was playing. The king sent it back again; Apollonius struck it swiftly, so that he never let it fall. The king then recognized the young man's agility, so that he knew that he had no equal in that game. He then said to his companions: "Go away from here; this young man, as it seems to me, is my equal."

When Apollonius heard that the king was praising him, he ran quickly and approached the king, and with a skilled hand he swung the *top*—apparently the ball—with such great speed that it seemed to the king as though he had been changed from old age back to youth. Afterwards Apollonius attended the king agreeably at his royal seat. When the king came out of the bath, Apollonius led him by the hand, and then Apollonius went away from there along the way by which he had come earlier.

After Apollonius had gone away, the king said to his men: "I swear by our common safety that I have never bathed better than I did today, through the service of a young man whose identity I do not know." He then turned his gaze towards one of his men and said: "Go and find out what sort of man the young man is who served me so well today."

The man then went after Apollonius. When he saw that Apollonius was wrapped in a dirty cloak, he returned to the king and said: "The young man you asked about is a shipwrecked man." The king said: "How do you know

that?" The man answered him: "Even if he himself keeps silent about it, his clothing reveals his condition." Then the king said: "Go quickly and tell him that 'the king asks you to come to his meal.'"

This model retains every stage from arrival to invitation. **Plegan** at 168.6 is grammatical accusative singular; "equipment for young men's play" is a contextual rendering, not a claim that the Old English noun is plural. "Bath," "baths" or "bathing place" can render the facility without changing the action.

The pronouns in the ball exchange are interpreted from the game sequence. At 169.5–7, however, the model deliberately leaves "he knew that he had no equal" unresolved; **næfde** must stay negative. At 169.11–13, **top** is retained with Cook's tentative ball interpretation. "Our common safety," "common welfare" or a carefully explained religious rendering may express the oath at 170.2; none should add an event. See R06 for the two substantial textual uncertainties.

The final invitation is intentionally awkward in English because the source combines an outer report with quoted second-person address. A fluent paraphrase may explain the intended message, but a complete translation should acknowledge the actual mixture rather than conceal it. The following feast is not part of this reading.

R02

1. Entry into the bath. The boy announces that the baths are open, and Apollonius hears him: **Se bæðstęde is open** (168.9–10), followed by Apollonius taking off his half-cloak and entering (168.11–12). His earlier concern is finding help to live on; the king has not yet invited him.

2. The game. Apollonius joins the ball game, catches and returns the ball with speed, and does not let it fall (168.18–169.5). The king notices **ðæs geongan snelnesse**, the young man's agility. Merely saying that they played omits the evidence of skill that attracts attention.

3. The king's statement. The king tells his companions to go away and says **ðes cniht … is mīn gelīca**, "this young man … is my equal" (169.7–8). Distinguish this clear direct statement from the preceding clause whose pronoun reference Cook calls unclear.

4. The messenger's conclusion. The messenger concludes that Apollonius is **forliden mann**, a shipwrecked man (170.10–11). He has seen him wrapped in a dirty cloak; he says **his gegierela hine gesweotolað**, "his

clothing reveals him" (170.13–14). He infers the condition from clothing, rather than reporting a confession or learning the man's name.

5. Final order. The king orders his messenger to go quickly and convey an invitation to Apollonius to come to the king's meal (170.14–16). The messenger is to deliver the request; the text does not yet narrate Apollonius accepting or attending the feast.

R03

1. 169.4 hine. Hine is accusative masculine singular and refers to the **ball**, ðoðor; Cook's note 3 confirms this. It is the actor of **feallan** in the construction "he never let it fall." Grammatical masculine does not make its referent a man.

2. 169.14 him. Him is dative singular and refers to the **king**, the person Apollonius serves with **ðēnode**. The verb's recipient/service frame and the scene establish its role; it is not an accusative object merely because English says served him.

3. 169.15 hē before hine. The **hē** immediately before hine lædde is nominative singular, **Apollonius**, subject of the leading action. Cook's note 14 identifies him explicitly. It is distinct from the king who has just come out of the bath.

4. 169.15 hine. Hine is accusative masculine singular, the **king**, direct object of lædde. Cook's note 15 names the king. Apollonius leads the king by the hand, not the reverse.

5. 169.16 him. Him is a dative reflexive referring to **Apollonius**, the subject who then turns away. It belongs to **gewęnde**, as the local help and §184a indicate. It does not introduce another person to whom Apollonius went.

6. 170.9 hē. The **hē** after ðæt is nominative masculine singular, **Apollonius**, subject of **wæs … bewǣfed**. The preceding observer is the messenger. Cook's note 8 and the clothing report distinguish the two referents; the masculine ending alone would not.

R04

1. 168.1–2 relation. Đe him getǣht wæs is a relative clause identifying **ðone weg**, the road that had been shown to him. It is not the main action of walking.

2. 168.1–2 finite group. The passive group is **getǣht wæs**: **wæs**, third-singular preterite indicative of wesan, is finite; **getǣht** is the past

participle. The relative's subject is the road, and **him** is the dative person to whom it was shown.

3. 168.2 relation. Ōð-ðæt hē becōm is a temporal endpoint clause: the walking continues until he reaches the gate.

4. 168.2 finite form. Becōm is third-singular preterite indicative of becuman. The completed arrival supplies the endpoint; do not call it subjunctive merely because it is subordinate.

5. 168.3 relation. Hwone hē biddan meahte is a dependent question giving the content of his thought: whom he might ask. **Hwone** denotes the person asked, not the subject of could.

6. 168.3 finite group. The group is **biddan meahte**. **Meahte** is third-singular preterite of magan, selected here as subjunctive possibility in the dependent question; the indicative has the same surface. **Biddan** is a plain infinitive, not a second finite verb.

7. 169.9 relation. Đæt se cyning hine hęrede is the content of what Apollonius heard: that the king praised him. The surrounding when-clause contains the hearing.

8. 169.9 finite form. Hęrede is third-singular preterite of hęrian, selected here as indicative in the heard content. Its subjunctive spelling is identical. The answer should identify the king as its subject and avoid pretending that the ending by itself proves mood.

9. 170.6 relation. Hwæt se geonga mann sīe is the dependent question governed by **gewite**, "find out." Here hwæt asks what the man is or what his condition is; the messenger responds with his shipwrecked condition.

10. 170.6 finite form. Sīe is third-singular present subjunctive of wesan. The subject is **se geonga mann**. It is finite, whereas gewite is the separate imperative governing the question.

11. 170.13 relation. Đēah hē hit self forswīge is a concessive clause: even if he himself keeps it silent. It concedes possible silence while asserting that the clothing still reveals him.

12. 170.13 finite form. Forswīge is third-singular present subjunctive of forswīgian in the supplied source construction. **Hē** is the subject and **hit** the concealed matter; **self** reinforces the subject rather than supplying another finite verb.

R05

1. Outer speaker. The **king, Arcestrates**, is the outer speaker, introduced by **Đā cwæð se cyning**.

2. Immediate addressee. His **messenger**, the man who has just returned with the report, is the immediate addressee of singular **Gā** and **sęge**. Apollonius is elsewhere at this point.

3. Him. Him denotes **Apollonius**, the dative recipient of the message after sęge.

4. Se cyning. Se cyning inside the proposed message denotes **the same king, Arcestrates**. The king gives the messenger wording that names him in the third person.

5. Đē and ðū. Inner **ðē** and **ðū** both denote **Apollonius**, the person who will hear the invitation. **Đē** is the accusative person whom the king asks; **ðū** is nominative subject of **cume**. Their referent is not the messenger merely because the king is currently addressing him.

6. Construction. The outer **sęge him ðæt** begins a report, but what follows is quoted wording with second-person address: **se cyning bitt ðē ðæt ðū cume tō his gereorde**. Cook's note 15 calls this a mixture of direct and indirect construction. Preserve that mixture when explaining the source; a smooth indirect paraphrase can explain its meaning but cannot replace the wording being analysed. **Cume** is present subjunctive in the request; English can render the request with "asks you to come."

R06

1. 169.5–7 translation. "The king then recognized the young man's agility, so that he knew that he had no equal in that game." This preserves the repeated pronouns and the negative **næfde** rather than silently deciding all their referents.

2. 169.5–7 limit. Original note 6 says the clause is unclear. Its Latin parallel has the king knowing that he himself had no equal; the Old English's sequence and repeated hē/his leave room for discussion, including a reading in which the young man is the one without an equal. A proposed reading should name its referents and acknowledge that limit. Dropping ne from næfde, or changing the whole clause to "he had found his equal," is not a translation of the printed wording.

3. 169.11–13 translation. "With a skilled hand he swung the top—apparently the ball—with such great speed that it seemed to the king

as though he had been changed from old age back to youth." The king experiences the seeming return to youth; Apollonius performs the action.

4. 169.11–13 limit. Original note 10 says that the Old English departs from the Latin. The English help for the Latin describes rubbing/anointing the king with ointment so rapidly that he seemed young again. Cook only tentatively identifies **top** with **ðoðor**. Translate **swang ðone top**, mark the uncertain object, and do not substitute the ointment action for the Old English event.

UNIT 17

Answer key

The composition models are new teaching material. The reading translation renders Cook's actual Old English and was prepared independently before comparison with other authorial translations. Each model is one defensible answer: preserve the participants, essential meaning, case relations, agreement, mood and clause connections, together with the task's explicit lexical, number, omission and order controls. A grammatical alternative can miss a stated target. All seven Cook sets retain the original joint group **XII, XIII**.

The supplied phrases and exact dictionary hints remain visible. Copying a given citation is not a test of independent recall; selecting the required ending, person, number or role may still be the task. The complete local numeral expressions, unusual reading frames and figurative supports are not invitations to reconstruct an untaught system unaided. English analytical answers may use equivalent precise terminology.

Except where an order is specified, grammatical rearrangements that preserve the relationships are acceptable. Documented spelling and inflectional variants must be distinguished from mistakes: for example, **ðām** beside selected **ðǣm**, or a licensed feminine plural **-e** beside a selected **-a**. Such variants do not excuse wrong case, person or sense. The selected tables govern tasks that expressly ask for their forms.[1]

A. Clauses and participants

A01

Task: Analyse the report. The man’s goodness is presented as simultaneous with the king’s past statement.

Input: Se cyning sægde ðæt se mann wǣre gōd.

Identify the two subjects and their finite verbs.

Se cyning is the nominative subject of **sægde**, preterite indicative third singular. **Se mann** is the nominative subject of **wǣre**, preterite subjunctive third singular. The king speaks; the reported goodness belongs to the man.

Classify ðæt and explain the reported time relation.

Ðæt introduces the content of the statement, “that the man was good”; it is a conjunction here. The task places that goodness at the time of the king's past statement. Thus past **wǣre** does not by itself mean that the goodness preceded the statement. Calling ðæt a relative pronoun would give it an unneeded participant role.

Does wǣre require the conclusion that the man was not good? Explain.

No. The subjunctive marks the embedded report; it does not establish that the man was bad or that the report was false. A translation such as “The king said that the man was good” preserves both the report and the stated simultaneity. An interpretation of earlier goodness or present contrary fact misses the supplied context.

A02

Task: Analyse the comparison; then replace the first subject by the men while keeping the king singular.

Input: Se mann sang bęt ðonne se cyning dyde.

Translate the sentence.

“The man sang better than the king did.” The man is the better singer in this comparison. “Better than the king sang” expresses the same meaning in English; reversing the two performers does not.

State the action repeated by dyde and explain why it is singular.

Dyde substitutes for the action “sang.” It is third singular because its own subject is **se cyning**, independently of the first clause's subject. It does not mean that the king performed some unspecified different action.

Write the complete revised Old English sentence.

Đā męnn sungon bęt ðonne se cyning dyde.

Đā męnn and **sungon** replace the first singular subject and verb. The singular **se cyning dyde** stays intact. Pluralizing dyde would change the second performer; retaining sang would leave the first clause without the requested plural agreement.

A03

Task: Analyse the relative clause; then replace the man by the men.

Input: Ic geseah ðone mann ðe sang.

Give the outer case and role of ðone mann.

Ðone mann is accusative singular, the direct object of **geseah**: the person whom I saw. Its role in the seeing clause determines that case.

Give the role represented by ðe inside the relative clause.

Inside the relative clause, **ðe** represents the singer and functions as subject of **sang**. The particle is invariant. Its antecedent's accusative case in the outer clause does not make the relative's internal role accusative.

Write the complete revised Old English sentence.

Ic geseah ðā męnn ðe sungon.

The object becomes **ðā męnn** and the relative verb becomes **sungon**. **Ic geseah** remains first singular: the same speaker saw several men. A different defensible order is possible, but changing the speaker to a plural subject changes the task.

A04

Task: A concerns a possible visit tomorrow. In B the speaker treats his coming now as contrary to fact. Analyse both clauses in each sentence.

Input: Gif hē cymð, ic fare.

Input: Gif hē cōme, ic fōre.

Translate A and name the mood of each verb.

A: “If he comes, I shall go.” **Cymð** is present indicative third singular; **fare** is present indicative first singular in this stated setting. Tomorrow supplies future reference. An indicative condition is possible after gif; no separate future auxiliary is needed.

Translate B and name the tense and mood of each verb.

B: “If he were coming now, I would go,” or “If he came now, I would go.” **Cōme** is preterite subjunctive third singular and **fōre** preterite subjunctive first singular. Here those past forms express the stipulated contrary-to-fact present situation, not a completed past visit.

Explain which evidence supplies the time and factual status.

The task's possible visit tomorrow versus contrary-to-fact coming now supplies the time and factual setting. The forms distinguish the two selected constructions, but **gif** alone fixes neither a universal mood nor a time. A translation of B as “If he had come, I would have gone” changes the given time relation.

F. Forms and grammatical roles

F01

Task: Use cniht in its explicitly taught servant sense and bōc book. Translate the four expressions. In each, choose the noun's case from its role rather than from an English word ending.

the servant's book

ðæs cnihtes bōc

Ðæs cnihtes is the singular genitive possessor; **bōc** is the singular head. The book does not become genitive merely because its owner is genitive. The assigned sense of cniht is servant.

the servants' books

ðāra cnihta bēc

Ðāra cnihta is genitive plural and **bēc** is the plural head: several servants' books. The changed vowel in bēc belongs to the book paradigm; a regularized plural would miss the selected form.

I give the servant the book.

Ic giefe ðæm cnihte ðā bōc.

Ic giefe is first singular present; **ðæm cnihte** is the dative recipient and **ðā bōc** the accusative thing given. Changing the order of the two objects can preserve the meaning; exchanging their case roles cannot.

We give the servants the books.

Wē giefað ðæm cnihtum ðā bēc.

Wē giefað is first plural. Both objects change number: dative **ðæm cnihtum**, accusative **ðā bēc**. Giefað is an assertion with wē here, despite sharing its spelling with a plural command form.

F02

Task: Use the selected endingless accusative of cwēn queen, while retaining its genitive/dative ending. Translate the three expressions, then explain the contrast.

I saw the queen.

Ic geseah ðā cwēn.

The queen is the accusative object of seeing: **ðā cwēn**. The endingless cwēn is the explicitly selected accusative. Documented **cwēne** can be a valid accusative alternative, but does not meet this task's endingless-form target.

I gave the queen the book.

Ic geaf ðære cwēne ðā bōc.

Ðære cwēne is the dative recipient; **ðā bōc** is the accusative gift. The endingless accusative option does not license dropping the dative -e.

the queen's book

ðære cwēne bōc

Ðære cwēne is genitive singular, dependent on **bōc**: the book belongs to the queen. Its spelling matches the preceding dative, while its grammatical function differs.

Explain what the three queen forms show about identifying case from an ending alone.

Cwēn is accusative in the seeing clause even without an ending; **cwēne** is dative as recipient and genitive as possessor. The governing construction and article identify the case. An unchanged ending is not proof of an unchanged grammatical role.

F03

Task: Use fox fox, hol hole and nest nest. Translate each sentence. Keep ordinary locative on with the dative and distinguish the two neuter plural patterns.

The fox is in the hole.

Se fox is on ðæm hole.

Se fox is nominative masculine singular. **On ðæm hole** is a dative location, not movement into a hole. **Is** agrees with the single fox.

The foxes are in the holes.

Đā foxas sindon on ðǣm holum.

Đā foxas sindon gives plural subject and verb; **on ðǣm holum** gives dative plural location. Changing foxas alone would leave the other requested number changes incomplete.

The nest is in the tree.

Đæt nest is on ðǣm trēowe.

Đæt nest is the singular subject. The tree is locative dative **trēowe**, with the documented w before the ending. This is a nest located in a tree, not a nest moving toward one.

The nests are in the trees.

Đā nest sindon on ðǣm trēowum.

Nominative plural **nest** has no overt plural ending; **ðā** and **sindon** make its plural function clear. **Trēowum** is dative plural. An unchanged nest does not justify singular is.

The holes are large.

Đā holu sindon miclu.

The short neuter **hol** has nominative plural **holu**, whereas heavy **nest** has a zero ending. Predicate **miclu** is strong neuter plural. An article in the subject does not turn the separate predicate adjective weak.

F04

Task: Use hęrian praise. Supply only the finite form required in each stated setting, then explain the contrast. The dictionary form is visible reference help.

A narrator states: they praise. Give present indicative third plural.

hęriað

Present indicative third plural: several people praise. This is the narrator's assertion, not a wish.

A speaker commands several listeners: praise! Give second-plural imperative.

hęriað

Second-plural imperative: several listeners are commanded to praise. Its spelling coincides with the indicative answer, but its addressees and function differ.

A speaker wishes: may they praise. Give present subjunctive third plural.

hęrien

Present subjunctive third plural: may they praise. The wish is expressed by the **-en** form; adding a verb meaning “be permitted” would change the construction.

Which answers are spelled alike, and what distinguishes their functions?

The first two answers, **hęriað**, are spelled alike. The assertion has third-plural subject reference; the command addresses the second plural. **Hęrien** has the separate subjunctive ending. The supplied infinitive identifies the verb; choosing the finite ending and analysis is the work required.

F05

Task: Use the explicitly taught present participles of ondrǣdan fear and hyngran be hungry. Translate the two nominal phrases, then distinguish each phrase's outer case from any object governed inside it.

to those fearing him: use a dative plural participle without an expressed people noun; him is the one feared

hine ondrǣdendum

The nominalized participle **ondrǣdendum** is dative plural, naming the beneficiaries. **Hine** is accusative singular, the person they fear. No separate people noun or finite fear verb is required.

the hungry: give the weak accusative plural phrase used as a direct object

ðā hyngrendan

Ðā hyngrendan is the article plus weak accusative plural participle: the hungry people as direct object. It does not express an impersonal finite “they hunger” construction.

State the two grammatical relations in the fear phrase.

The whole fear phrase is dative because of its beneficiary role. Within that phrase, **ondrǣdan** governs accusative **hine**. The dependent object does not copy the phrase's outer dative case.

Explain why a present participle can name people here without being a finite verb.

A participle can be used substantivally for people characterized by an action or condition. It then takes the case, number and strong/weak endings required by that noun phrase. “Present participle” names its form; it does not supply finite person agreement or an independent present-tense assertion.

C. Composition

C01

Task: Translate: The king saw the men who sang. Use an invariant relative particle.

Write one complete Old English sentence.

Se cyning geseah ðā męnn ðe sungon.

The king is the singular subject of **geseah**; **ðā męnn** is its accusative plural object. The invariant **ðe** represents those men as the subject of plural **sungon**. A demonstrative relative can be grammatical elsewhere, but this task requests the invariant particle.

C02

Task: Translate: The king is as good as the men are. Express equal degree with swā … swā.

Write one complete Old English sentence.

Se cyning is swā gōd swā ðā męnn sindon.

The two **swā** markers express equal degree: the king is as good as the men. **Gōd** is the singular predicate of the king, while **sindon** agrees with the men in the comparison clause. A comparative meaning “better than” would reverse the requested equality.

C03

Task: A visit is possible tomorrow. Translate: If he comes, give (plural) him the book.

Write one complete Old English sentence.

Gif hē cymð, giefað him ðā bōc.

Cymð is an indicative in the open future condition. **Giefað** addresses several listeners; **him** is the dative recipient and **ðā bōc** the accusative gift. A singular command would be valid for one listener but would miss the explicit plural target.

C04

Task: Translate: The man says that the king is good. Present the content as a report, using the present subjunctive.

Write one complete Old English sentence.

Se mann sægð ðæt se cyning sīe gōd.

Se mann speaks; **se cyning** is the subject of the reported goodness. **Sīe** is present subjunctive third singular, as explicitly requested. An indicative can assert certainty in a reported clause, but would not meet this stated mood target. The report need not be false.

Cook 37

Cook's instruction: [In this exercise, omit the article and the second personal pronoun throughout.]

This instruction applies to all fourteen items. Retain necessary third-person pronouns such as **hīe** in the praise wishes, but omit an article and an independent second-person subject throughout. The noun catalogues in 37.8–12 continue the address; they need not be converted into fresh finite sentences. Accompanying descriptive adjectives use the selected weak address forms, while **eall** retains its separately taught strong pattern.

Cook 37.1

Hęriað Dryhten of heofonum; hęriað hine on hēanessum.
Cook's prompt: Praise ye the Lord from (of) the heavens; praise him in the heights.
Target and explanation: Both **hęriað** forms are plural commands. **Dryhten** and **hine** are the persons praised, in the accusative. **Of heofonum** gives the origin and **on hēanessum** the location, both with dative plurals. Adding a second-person subject or an article would miss the whole exercise's omission rule; treating praise as an assertion would change its force.

Cook 37.2

Hęriað hine, ealle his ęnglas; hęriað hine, eall his mægnu.
Cook's prompt: Praise ye him, all his angels; praise him, all his powers (mægen).
Target and explanation: The angels and powers are the groups addressed, not extra objects of praise. **Ealle ęnglas** is masculine plural; **eall mægnu** is neuter plural, with the explicitly taught sense "powers." **His** belongs to both groups. Neither the English collective sense nor the familiar strength gloss licenses a singular reading here.

Cook 37.3

Hęriað hine, sunne and mōna; hęriað hine, ealle steorran and lēoht.
Cook's prompt: Praise ye him, sun and moon; praise him, all ye stars and light (lēoht).
Target and explanation: Sun and moon are singular entities in the address; **steorran** is plural, while **lēoht** is the supplied mass noun "light." **Ealle** modifies the stars. Keep both commands and all four named entities. English ye does not override the instruction to omit the second-person pronoun.

Cook 37.4

Hęriað hine, heofonas heofona, and wæteru ðe ofer heofonas sindon.
Cook's prompt: Praise him, ye heavens of heavens, and ye waters that are above (ofer, 172) the heavens.
Target and explanation: Heofona is genitive plural dependent on the addressed **heofonas**. **Wæteru** supplies the plural antecedent of **ðe**, the subject of **sindon** inside the relative clause. The selected **ofer heofonas** retains the local accusative target. A genitive near the relative does not determine its internal subject role.

Cook 37.5

Hęrien hīe naman Dryhtnes, for-ðon-ðe hē gecwæð and hīe wǣron worhte; hē bebēad and hīe wǣron gesceapene.
Cook's prompt: Let them praise [praise they] the name of the Lord; because he spake (gecweðan), and they were made (wyrcean); he commanded, and they were created (p. 190, l. 19).
Target and explanation: Hęrien hīe is a third-plural wish, "may they praise," rather than a command addressed to them or a permission construction. **Naman** is the accusative object and **Dryhtnes** its genitive dependent. Keep the specified **gecwæð** and both passive predicates. **Worhte/gesceapene** are selected plural predicate participles after **wǣron**; worhte here is not a second finite past verb. Uninflected predicate participles are also attested, but the model illustrates the assigned plural forms.

Cook 37.6

Hē sętte hīe ā ā ā; hē sętte bebod and ne gewīt.
Cook's prompt: He hath appointed them for ever and ever; he (om. hath) made (sęttan) a decree (bebod, 47), and (om. it) shall not pass (gewītan).
Target and explanation: The two **sętte** predicates appoint the entities and establish a decree. The simple preterite may render English hath appointed; the second clause expressly omits hath. The final understood subject is **bebod**, the decree, not God or plural hīe. **Ne gewīt** has future reference here. The entire compressed ending and **ā ā ā** remain supplied; restoring it would miss the explicit omission.

Cook 37.7

Hęriað Dryhten of eorðan, dracan and ealla nēowolnessa.
Cook's prompt: Praise the Lord from the earth, ye dragons (draca, 53), and all deeps (nēowolnes).
Target and explanation: Dracan and **ealla nēowolnessa** are plural addressees; **Dryhten** is the object praised. **Of eorðan** gives the origin. The selected feminine plural quantifier is ealla. A documented -e variant need not be ungrammatical, but differs from that selected table form. Do not turn the dragons and deeps into the things being praised.

Cook 37.8

Fȳr and hægel, snāw and īs; gāstas ȳsta ðe his word dōð;
Cook's prompt: Fire and hail (hægel, 43); snow (snāw, 43) and ice (īs, 47); spirits of the storms (ȳst, 51. b) which fulfil (dōn) his word;
Target and explanation: This catalogue continues the preceding address. **Ȳsta** is genitive plural, "of storms"; **ðe** represents the spirits as the subject of plural **dōð**. **His word** is their accusative object in the taught fulfilment sense of dōn. The source fragment needs neither an invented new main verb nor an added "things" noun for the listed substances.

Cook 37.9

Muntas and ealle hyllas; wæstmbæran trēowu and ealle cēderbēamas;
Cook's prompt: Mountains, and all hills (hyll, 43); fruitful (wæstmbære, 59) trees, and all cedars;
Target and explanation: All four groups remain plural. **Wæstmbæran** is the selected weak adjective in direct address, agreeing with **trēowu**; the given dictionary form wæstmbære does not itself supply that ending. **Ealle** follows its own strong pattern with hills and cedars. Strong **wæstmbæru** is a real neuter plural form, but does not instantiate the selected weak-address construction. Keep short **æ** in wæstm.

Cook 37.10

Dēor and eall nīetenu; nædran and gefiðredan fuglas;
Cook's prompt: (Wild) beasts, and all cattle; serpents, and winged (gefiðred) fowl;
Target and explanation: Dēor is endingless neuter plural here; **eall nīetenu** also has neuter plural agreement. **Nædran** names the serpents. The birds are plural **fuglas**, with supplied weak address adjective **gefiðredan**. English cattle and fowl do not independently determine OE gender or allow singular agreement. The parenthetical wild does not require adding a separate adjective to dēor.

Cook 37.11

Cyningas eorðan and eall folc; ealdormęnn and ealle dēman eorðan;
Cook's prompt: Kings of the earth, and all peoples; princes, and all judges of the earth;
Target and explanation: Kings, peoples, princes and judges form four addressed plural groups. **Eorðan** depends on kings and judges where it occurs. **Eall folc** is neuter plural despite the endingless noun; **ealle dēman** is masculine plural. Changing the outer case because a noun has a genitive dependent confuses the two relations.

Cook 37.12

Geongan and fǣmnan; ealdan mid bearnum;
Cook's prompt: Young (om. men), and maidens (fǣmne); old (om. men), with children;
Target and explanation: Geongan and **ealdan** are weak plural adjectives used for the addressed young and old people. Do not restore the expressly omitted men. **Fǣmnan** is the plural noun "maidens," while **mid bearnum** is dative plural accompaniment. Calling the adjectives substantival explains their use without creating separate new nouns.

Cook 37.13

Hęrien hīe naman Dryhtnes; for-ðon-ðe his ānes nama is ūpāhafen; his wuldor is ofer eorðan and heofon.
Cook's prompt: Let them praise the name of the Lord; for the name of him alone is exalted (ūpāhębban), his glory (wuldor) is above (ofer, 172) the earth and heaven.
Target and explanation: The opening is again a third-plural wish. **His ānes** means "of him alone"; it does not mean merely "his only name." **Ūpāhafen** is a passive participle after **is**, distinct from the finite present in 37.14. Glory is above both earth and heaven in the selected **ofer** phrase. Preserve all three predications and the causal connection.

Cook 37.14

Hē ūpāhęfð horn his folces, lof ealra his hālgena, bearna Israeles, folces him nēalǣcendes.

Cook's prompt: He exalteth the horn (horn, 43) of his people, the praise of all his saints (hālga, 53), of the children (bearn) of Israel (Israel), of the people drawing nigh (om. unto) him.

Target and explanation: Retain literal **horn**. Raising it in this praise context can be understood as exalting the people's strength or power; that interpretation explains the image without establishing a replacement dictionary gloss. **Lof** is appositional praise, followed by the chain of genitives. **Hālgena** is from the explicitly cited weak noun **hālga**, not the adjective hālig. In **folces him nēalǣcendes**, the participle agrees with genitive singular folces, while him is the dative person approached. The whole dense phrase is supplied; removing the image or making him genitive loses a distinct relation.

Cook 38

Cook 38.1

Se cyning worhte micel elpenbǣnen setl and oferworhte hit mid ðǣm bętstan golde.
Cook's prompt: The king made a great ivory (elpenbǣnen, 57. 3) throne, and overlaid (oferwyrcean) it with (mid) the best gold.
Target and explanation: Micel elpenbǣnen setl is the neuter accusative throne, resumed by **hit**. **Oferworhte** meets the explicit oferwyrcean target; another grammatical verb for covering would not meet that lexical instruction. **Mid ðǣm bętstan golde** gives the material, with the selected weak superlative after the article. Keep both making and overlaying.

Cook 38.2

Sumu cwēn wæs on ðǣm dagum be sūðan, hāten Saba.
Cook's prompt: There (om.) was a certain queen in those days in the south, called (hātan) Sheba (Saba).
Target and explanation: The subject is feminine singular **sumu cwēn**; the existential dummy there is omitted. **On ðǣm dagum** and **be sūðan** are the supplied temporal and southern-location phrases. **Hāten Saba** identifies her name; it does not mean that she was ordered to act. The foreign name is local reference help, not an inferred productive naming paradigm.

Cook 38.3

Đā hīerde hēo Salomones hlīsan and cōm of ðǣm sūðernum gemǣrum tō Salomone binnan Hierusalem, and hiere olfendas bǣron sūðerne wyrta and dēorwierðe gimmas and unrīm goldes.
Cook's prompt: Then she heard the fame (hlīsa) of Solomon (Salomones), and came from the southern (sūðerne, 59) boundaries to Solomon within Jerusalem, and her camels bore southern spices [herbs], and precious gems, and a quantity (unrīm) of gold (154. a).
Target and explanation: Solomon possesses the fame; the queen comes from the southern boundaries to Solomon within Jerusalem. **Olfendas** is the plural camel subject of **bǣron**. Preserve herbs, gems and the quantity of gold as three coordinated loads; **goldes** is genitive after **unrīm**. The local **sūðerne wyrta** uses an evidenced feminine plural -e variant, not an error merely because another selected table uses -a. The supplied Salomones and foreign place-name remain available.

Cook 38.4

Sēo cwēn hæfde ðā sprǣce wið Salomon and sægde him swā hwæt swā hēo on hiere heortan ðōhte.
Cook's prompt: The queen then (ðā) had speech with (wið) Solomon, and said (om. to) him whatsoever she thought in her heart (verb last).
Target and explanation: Wið Salomon is the supplied speech-partner frame, not hostility toward Solomon. **Him** is the dative person told; the content is whatever the queen thought. Keep **ðōhte** last in that subordinate clause, as directed, and retain the thought in her heart. A supported dative conversation-partner variant can be valid; it does not change the recipient/content distinction.

Cook 38.5

Salomon hīe ðā lǣrde and sægde hiere ðæt andgiet ealra ðāra worda ðe hēo hine āscode.
Cook's prompt: Solomon then taught her, and told (sęcgean) her the meaning of all the words that (87. d) she asked (āscian) him.
Target and explanation: The person taught is accusative **hīe**; the person told is dative **hiere**. **Andgiet** is the meaning communicated, with dependent **ealra ðāra worda**. Inside the relative, the queen is subject and **hine** the person she asked; **ðe** represents the things asked about. Its role is not determined simply by the genitive worda outside the clause.

Cook 38.6

Ðā geseah sēo cwēn Salomones wīsdōm and ðæt mǣre tempel ðe hē geworhte and ðæs cyninges manigfealda ðēnunga.
Cook's prompt: Then the queen saw the wisdom of Solomon, and the great (mǣre) temple that (87. d) he (om. had) built, and the king's manifold services.
Target and explanation: The queen sees three things: Solomon's wisdom, the temple, and the king's services. **Mǣre** retains the named adjective. The relative's **geworhte** is simple preterite under om. had; earlier building is inferred from the context, without adding a forbidden auxiliary.
Manigfealda ðēnunga is the selected feminine accusative plural. **Tempel** remains the full nominative/accusative stem despite syncope in other cells.

Cook 38.7

Hēo wæs tō ðan swīðe ofwundrod, ðæt hēo nānne gāst furðor næfde.
Cook's prompt: She was so (tō ðan) greatly astonished (ofwundrian, 118), that she had no spirit more (furðor).
Target and explanation: The supplied **tō ðan … ðæt** relates degree of astonishment to its result. **Ofwundrod** describes the astonished subject; **nānne gāst … næfde** is one negative predication, with accusative gāst. **Furðor** preserves the "more" reference. "She was left breathless" may explain the effect, but replacing the whole literal structure with a report of her death is unsupported.

Cook 38.8

Hēo sægde ðā tō ðæm cyninge: Sōð is ðæt word ðe ic on mīnum ēðle be ðē and ðīnum wīsdōme hīerde; ac ic nolde ær gelīefan ær ic self hit gesāwe.
Cook's prompt: She said then to (tō) the king, True is the word that (87. d) I heard in my country concerning thee and thy wisdom (wīsdōm); but I would not believe before I (om. my)self saw (196. b) it (verb last).
Target and explanation: Keep both the truth of the report and the queen's former refusal to believe before seeing personally. **Self** remains: om. my does not omit it. **Gesāwe** is first-singular past subjunctive in the prospective before-clause viewed from that earlier refusal, not a claim that she never saw it. Only the final saw-clause is explicitly marked verb last; **hīerde** is also clause-final in this model, but that placement is not separately mandated. The supplied topic phrases do not make thee the object of hearing.

Cook 38.9

Māra is ðīn wīsdōm and ðīn weorc ðonne se hlīsa wære ðe ic hīerde.
Cook's prompt: Greater (micel, 66) is thy wisdom and thy work than the report (hlīsa) was (wære) that I heard.
Target and explanation: Māra supplies the comparative, and the model treats wisdom with its work as a combined singular subject. A defensible plural matrix formulation can be grammatical if its agreement is coherent. The explicitly given **wære** belongs to singular **se hlīsa**, the report, not to the wisdom/work subject. Its exact spelling is visible reference help; this one supplied comparison does not require subjunctive after every ðonne.

Cook 38.10

Ēadige sindon ðīne ðegnas and ðīne ðēowan, ðe simle ætforan ðē standað and ðīnne wīsdōm hīerað.

Cook's prompt: Blessed (ēadig) are thy vassals and thy servants (ðēowa, 53), that always (simle) stand before (ætforan) thee, and hear thy wisdom.

Target and explanation: Both **ðegnas** and **ðēowan** are plural subjects of **sindon**, with plural **ēadige**. They also supply the relative subject of **standað** and **hīerað**. ***Ætforan ðē*** locates them before the addressee; **ðīnne wīsdōm** is the masculine accusative object heard. Preserve always and both groups rather than reducing the statement to one servant.

Cook 39

Items 39.1–4 complete the exchange concerning Solomon. Items 39.5–7 change to the building image and divine reward; they are not further events in the queen's visit.

Cook 39.1

Blētsod sīe se ælmihtiga God, ðe ðē cēas and ðē ofer ðæt rīce Israela gesęttе, ðæt ðū dōmas and rihtwīsnesse sętte.

Cook's prompt: Blessed (blētsian) be the almighty God, who (87. d) selected thee, and placed (gesęttan) thee over (ofer, 172) the kingdom of the Israelites (Israela), that thou (om. mightest) establish (sęttan) judgments and righteousness.

Target and explanation: Blētsod sīe expresses the blessing wish. God is the relative subject who chose and placed the addressee; **ðē** is accusative in those actions. The final **ðæt** introduces purpose, and **sętte** is present subjunctive second singular with **ðū**, "that you establish." It is not a new past assertion about God. Keep **gesętte**, the accusative authority phrase after ofer, and the omission of mightest.

Cook 39.2

Hēo forgeaf ðǣm cyninge hund and twēntig punda goldes and męnigeo dēorwierðra wyrta and dēorwierðra stāna.

Cook's prompt: She gave (forgiefan) the king (om. a) hundred and twenty pounds (154. c) of gold (154. a), and (om. a) multitude of precious spices (wyrt) and of precious stones.

Target and explanation: The king is dative recipient. The whole supplied amount is **hund and twēntig punda goldes**, with genitive pounds after the high number and genitive gold as material. **Męnigeo** has the dependent genitive spice and stone phrases. Retain all three gifts and omit the two articles as directed. This local 120 expression does not test a general high-numeral system.

Cook 39.3

Salomon ēac forgeaf ðære cwēne eall ðæt ðe hēo æt him giernde; and hēo gewęnde ongēan tō hiere ēðle mid hiere ðegnum.
Cook's prompt: Solomon also gave the queen whatsoever she desired (giernan) of (æt) him; and she returned (gewęndan) again (ongēan) to her country with her retainers.
Target and explanation: The queen is dative recipient of Solomon's gift; **eall ðæt** is its accusative object. Within the relative, **giernan** has the taught desired-thing relation and **æt him** names the person asked. The invariant ðe allows the inner relation without forcing the outer object into genitive. The return keeps both her own homeland and her accompanying retainers; changing the possessor to Solomon changes the event.

Cook 39.4

Salomon wæs ðā mærsod ofer eallum eorðlicum cyningum; and ealla ðēoda gewilnodon ðæt hīe hine gesāwen and his wīsdōm hīerden.
Cook's prompt: Solomon then was magnified (mærsian, 118) above (ofer, 166) all earthly kings; and all nations (ðēod) desired (gewilnian) to see [that they might see, 194. b] him, and hear his wisdom.
Target and explanation: Ofer eallum eorðlicum cyningum is the explicitly required dative rank comparison. The desire is expressed by the bracketed finite structure: **ðæt hīe ... gesāwen ... hīerden**, past subjunctive plurals after **gewilnodon**. An infinitive could express a similar meaning in an appropriate frame but misses this finite-clause target. **Ealla ðēoda** is the selected feminine plural subject.

Cook 39.5

Swā hwā swā ofer ðissum grundwealle wyrcð gold oððe seolfor oððe dēorwierðe stānas oððe trēowu, strēaw oððe ceaf, ānes gehwilces weorc bið gesweotolod.
Cook's prompt: Whosoever buildeth upon (ofer, 166) this foundation (grundweall, 43) gold, or silver, or precious stones, or trees, straw (strēaw, 47) or chaff (ceaf, 47), every one's (ānes gehwilces) work shall be manifested.
Target and explanation: Keep all six materials and the dative foundation after the specified ofer. **Swā hwā swā** is the indefinite builder; **ānes gehwilces** is the exact supplied genitive "of each one," dependent on **weorc**. **Bið gesweotolod** expresses the future manifestation of that work. In particular, the prompt says trees: substituting a different material sense is unnecessary. Replacing the given genitive phrase with a synonym can miss a reference target.

Cook 39.6

Gif sēo getimbrung ðurhwunað and ðǣm fȳre wiðstęnt, ðonne onfēhð se wyrhta edlēane æt Gode his weorces.

Cook's prompt: If the building (getimbrung, 51. 3) continues (ðurhwunian, 118), and withstands the fire (164. m), then shall the workman receive (om. a) reward (edlēan, 47) from (æt) God for his work (153. e).

Target and explanation: Feminine **sēo getimbrung** is the subject of both present indicatives; this is an open condition. **Wiðstęnt** governs dative **ðǣm fȳre**. The workman receives dative **edlēane** in the selected onfōn frame, from **æt Gode**; **his weorces** gives the causal genitive "for his work." A documented accusative receiving frame is not universally wrong, but differs from the selected dative construction here.

Cook 39.7

Nān ēage ne mæg on ðissum līfe gesēon, ne nān ēare hīeran, ne nānes mannes heorte āsmēan ðā ðing ðe God gearcað ðǣm ðe hine lufiað.

Cook's prompt: No (183) eye can in this life see, nor any (183) ear (53. 2) hear, nor any (183) man's heart conceive (āsmēan, 113), the things that God prepares (gearcian, 118) (om. for) those that love him.

Target and explanation: Retain **mæg**: eye, ear and heart cannot see, hear or conceive the things prepared. The coordinated infinitives share that modal; **āsmēan** is a visible citation reference in a supplied frame. **Gearcað** is present, "prepares," not a past preparation. The people who love God are dative beneficiaries without an added for. The repeated negatives express one negative scope, not cancellation.

Cook 40

Simple preterites can render the English perfect in this passage. Where an English helper is expressly omitted, retain that target. An appropriately formed analytic perfect can be valid elsewhere; its mere resemblance to English is not required here.

Cook 40.1

Se ęngel grētte Marian and sægde ðæt hēo mid Godes giefe āfylled wære, and ðæt God wære hiere mid; and hēo wæs blētsod betwēox wīfum.

Cook's prompt: The angel saluted Mary, and said that she was (194. b) filled (āfyllan, 113) with God's grace [gift], and that God was with her (preposition last); and she was blessed (blētsian) among women.

Target and explanation: The two **wære** clauses report what the angel said; **hēo** is the filled person, while **God** is the subject of the second reported clause. Keep the postposed **hiere mid** as required. **Godes giefe** is the supplied grace/gift expression, not an independently inferred extension of an earlier gift gloss. The final **hēo wæs blētsod** is the separate assertion about Mary among women. The complete supplied **betwēox wīfum** gives the dative plural complement; independent recall of this government is not assessed.

Cook 40.2

Mīn sāwol mǣrsað Dryhten, and mīn gāst blissode on Gode mīnum Hǣlende.

Cook's prompt: My soul (om. doth) magnify (mǣrsian) the Lord, and my spirit (om. hath) rejoiced in God my Saviour.

Target and explanation: Mǣrsað is present, magnifying in praise; **blissode** is preterite, rejoiced. The English helpers are omitted as directed. The whole **blissode on Gode mīnum Hǣlende** frame supplies rejoicing in God, with the dative apposition "my Saviour." It neither describes physical enlargement of the Lord nor follows automatically from a previously known but different rejoicing preposition.

Cook 40.3

For-ðon-ðe hē geseah his ðīnenne ēaðmōdnesse; sōðlice, heonanforð ealla cnēorissa mē ēadige sęcgað.
Cook's prompt: For he regarded (gesēon) the humility of his handmaiden (ðīnen, 51. 5); verily (sōðlice), hence forth all generations (cnēoris) shall call (sęcgean) me blessed (ēadig).
Target and explanation: Geseah has the taught regard sense, with the handmaid's humility as object. In the second clause **ealla cnēorissa** is feminine nominative plural and controls **sęcgað**. **Mē** is the person called, accusative, and **ēadige** is the agreeing feminine accusative description of Mary. The future reference does not require a future auxiliary. A saying/quotation interpretation that loses the object predicate misses "call me blessed."

Cook 40.4

For-ðon-ðe se ðe mihtig is dyde mē miclu ðing; and hālig is his nama.
Cook's prompt: For he that (sē ðe) is mighty hath done (om. to) me great things; and holy is his name.
Target and explanation: Se ðe mihtig is names the mighty one; **mē** is the dative beneficiary of **dyde**, without the omitted to. **Miclu ðing** is neuter accusative plural, "great things." Do not substitute a masculine plural adjective simply because English things is plural. **Hālig** is the predicate of singular **his nama**; both predications remain.

Cook 40.5

And his mildheortnes is hine ondrædendum of cnēorisse on cnēorisse.
Cook's prompt: And his mercy is (om. on those) fearing (161) him from (of) generation to (on) generation.
Target and explanation: Ondrædendum is a dative plural human substantive, the beneficiaries of mercy, while its internal object **hine** is accusative. Do not restore the expressly omitted on those. The complete **of cnēorisse on cnēorisse** phrase supplies the temporal range from generation to generation; its local uses are not inferred from spatial motion rules. The two case relations in the fear phrase match F05.

Cook 40.6

Hē āwearp ðā mihtgan of setle and ūpāhōf ðā ēaðmōdan.
Cook's prompt: He hath put down (āweorpan) the powerful from (of) (om. their) seat, and lifted up (ūpāhębban) the lowly.
Target and explanation: Ðā mihtgan and **ðā ēaðmōdan** are weak accusative plural substantives, the people displaced and raised. The two strong preterites **āwearp** and **ūpāhōf** retain the reversal. **Of setle** is the source, with no possessive their under the omission control. Abstract "power" and "humility" would lose the affected people.

Cook 40.7

Hē āfylde ðā hyngrendan mid gōdum, and ðā rīcan hē forlēt æmtige.
Cook's prompt: He hath filled the hungering (om. ones) with good (om. things), and the rich (rīce) he hath let go empty.
Target and explanation: Ðā hyngrendan is the hungry people as weak accusative plural. **Mid gōdum** uses the previously taught lexical noun "good things," dative plural, without restoring the omitted things. **Ðā rīcan** is the object of **forlēt** in the let-go/dismiss sense; **æmtige** describes their condition. Do not turn hungry into an impersonal finite clause or make empty agree with singular hē.

Cook 40.8

Hē onfēng his cnihte Israel and gemunde his mildheortnesse.
Cook's prompt: He hath accepted his servant (cniht) Israel, and remembered his mercy.
Target and explanation: Onfēng his cnihte Israel uses the selected dative person-acceptance frame, with cniht in the servant sense and the supplied name Israel. **Gemunde** preserves the distinct remembering action and its object mercy. The attested care/protection sense explains the reception, but "helped" need not replace the prompt's accepted. The foreign name does not license an invented general declension.

Cook 40.9

Swā hē spræc tō ūrum fæderum, Abrahame and his sǽde, ā ā ā.
Cook's prompt: As he spake (sprecan) to (tō) our fathers, Abraham and his seed, for ever and ever.
Target and explanation: The comparison **swā** introduces what he spoke. **Tō** governs the fathers, Abraham and his seed; **his** refers to Abraham. The newly taught collective seed sense is offspring or descendants, not agricultural produce. Retaining "seed" preserves the image, while descendants is an acceptable explanatory translation. Keep the full perpetuity expression and do not turn the genitive possessor into the speaker.

Cook 40.10

Maria wunode hiere mid swilce ðrīe mōnaðas and gewęnde ðā tō hiere āgnum hūse.
Cook's prompt: Mary dwelt with her about (swilce) three months, and returned (gewęndan) then to her own house.
Target and explanation: Hiere mid gives the woman with whom Mary stayed; **swilce** supplies approximation here. **Ðrīe mōnaðas** is accusative duration, not a location or a dative after mid. The destination **tō hiere āgnum hūse** is Mary's own house. The two actions are dwelling and returning; omitting own or assigning its possessor to the other woman changes the reference.

Cook 41

Cook 41.1

God wæs æfre, and æfre wæs his wīsdōm of him ācęnned; and se wīsdōm is his Sunu, swā mihtig swā se Fæder.
Cook's prompt: God was ever, and ever was his wisdom begotten of (of) him, and the wisdom is his Son, just as mighty as the Father.
Target and explanation: Keep all three relations: God's everlasting existence, the everlasting begetting of his wisdom, and that wisdom's identity with his Son. The supplied **of him ācęnned** is this specific source relation, not a general newly taught passive-agent rule. **Swā mihtig swā** expresses equality with the Father. Nothing in the repeated ever requires inventing a chronological beginning for the begetting.

Cook 41.2

Godes Gāst gefylð ealne ymbhwyrft middangeardes, and hē hielt eall ðing.
Cook's prompt: The Spirit of God filleth all the circuit of the world, and he maintaineth all things.
Target and explanation: Gefylð uses the fill sense, with accusative **ealne ymbhwyrft middangeardes**, the entire circuit of the world. **Hielt** is the selected present third singular of healdan in the explicitly taught sustain/maintain sense. **Eall ðing** is neuter accusative plural. Finishing a task and merely grasping objects would substitute different senses for the two predicates.

Cook 41.3

Se ðe mīnes Fæder willan wyrcð, hē is mīn brōðor and mīn mōdor and mīn sweostor.
Cook's prompt: He that doeth (wyrcean) my Father’s will, he is my brother, and my mother, and my sister.
Target and explanation: Se ðe names whoever performs the Father's will; **hē** resumes that subject in the main clause. **Mīnes Fæder willan** is the accusative will with its genitive possessor. Keep all three predicate relations—brother, mother and sister. The figurative kinship does not require altering the grammar to claim literal biological identity.

Cook 41.4

Wē nān ðing tō ðissum middangearde ne brōhton, ne magon wē nān ðing heonon ūs mid lǣdan.
Cook's prompt: We brought (bringan) no thing to this world, nor can we take (lǣdan) any (183) thing hence with us.
Target and explanation: The first clause denies bringing anything into the world; the second denies ability to carry anything away. **Brōhton** is past plural; **magon … lǣdan** is present plural modal plus infinitive. **Nān … ne** preserves negative concord, and **ūs mid** means with us. Do not replace the carrying-things sense with an unrelated leading-people interpretation or omit hence.

Cook 41.5

Biddað, and ēow bið seald; sēcað, and gē findað; cnuciað, and ēow bið geopenod.
Cook's prompt: Ask (biddan), and (om. it shall) be given you; seek, and ye shall find; knock (cnucian, 118), and it shall be opened (om. to) you.
Target and explanation: Keep all three command/result pairs. **Biddað, sēcað, cnuciað** address several people; **gē findað** asserts the resulting finding with future reference. **Ēow bið seald/geopenod** are the supplied passives with dative recipients. Om. it shall does not remove the OE finite passive auxiliary: it prevents a mechanical English calque. Restoring a dummy it or a preposition before ēow misses the stated targets.

Cook 41.6

Ūre Fæder, ðū ðe eart on heofonum, sīe ðīn nama gehālgod.
Cook's prompt: Our Father, thou which (87. d) art in heaven(s), be thy name hallowed.
Target and explanation: Ūre Fæder is direct address. The relative refers to **ðū**, so its verb is second-singular **eart**, despite English which. The name is the subject of the wish **sīe … gehālgod**. A third-person relative verb or a plain assertion that the name is holy would miss the specified person or the wish.

Cook 41.7

Tōcume ðīn rīce; geweorðe ðīn willa on eorðan swā-swā on heofonum.
Cook's prompt: Thy kingdom (rīce) come (tōcuman; verb first); thy will befall (geweorðan) on earth as (swā-swā) in heaven(s) (verb first).
Target and explanation: Both clauses are wishes, with present subjunctive verbs first. **Tōcume** retains the explicitly required prefix; bare cuman may be grammatical in another formulation but does not meet that lexical target. **Geweorðe** means come to pass here. Keep will as the second subject and the supplied **swā-swā** comparison between earth and heavens.

Cook 41.8

Sęle ūs tōdæg ūrne dæghwāmlīcan hlāf; and forgief ūs ūre gyltas, swā wē ūrum gyltendum forgiefað.
Cook's prompt: Give (sęllan) us to-day our daily (dæghwāmlīc, 55) bread; and forgive (forgiefan) us our debts (gylt, 43), as we forgive (164) our debtors (gyltend, 43. 6).
Target and explanation: Sęle and **forgief** are singular commands, addressed to God; **ūs** is dative. The daily bread is accusative **ūrne dæghwāmlīcan hlāf**. This model chooses a weak adjective after the possessive; strong **ūrne dæghwāmlīcne hlāf** is also valid and meets the prompt, which specifies neither choice. **Gyltas** are the debts, but **gyltendum** are the dative debtors forgiven in the comparison clause. **Wē … forgiefað** is first-plural assertion. Exchanging debts and debtors changes both participants and government.

Cook 41.9

And ne lǣd ðū ūs on costnunge, ac ālīes ūs of yfele.
Cook's prompt: And lead thou us not into (on, 172) temptation (costnung), but deliver us from evil.
Target and explanation: Ne lǣd ðū is a negative singular command; **ālīes** is its positive counterpart, deliver. **Ūs** is accusative in both actions. **On costnunge** gives the directed temptation phrase, while **of yfele** gives the source of deliverance. Do not turn these into assertions about what God is doing or reverse the two prepositional relations.

Cook 41.10

Sīe hit swā.
Cook's prompt: Be it so.
Target and explanation: Sīe is present subjunctive third singular in an independent wish or assent formula, with **hit** as subject: "May it be so." A simple "It is so" would turn the wish into an assertion. No permission verb is needed.

Cook 41.11

Hwilc fæder sęlð his bearne stān, gif hit hine hlāfes bitt?
Cook's prompt: What (hwilc) father will give to his child (164. a) a stone, if it asks (156. b; 159. b) bread of him?
Target and explanation: The father gives to dative **his bearne**. Inside the condition **hit** refers to that child and is the asker; **hine** is the father asked, accusative, and **hlāfes** the thing requested, genitive. **Bitt** agrees with the singular child. Giving and asking therefore have different case frames; English of does not require an added OE preposition.

Cook 41.12

God āwrāt ðā ealdan æ mid his fingre on ðæm stānenum tabelum.
Cook's prompt: God wrote (āwrītan) the old law (æ) with his finger (finger, 43) on the stone tables (tabele, 53).
Target and explanation: Āwrāt retains the prefixed write lexeme and its strong past stem. **Ðā ealdan æ** is the law written; **mid his fingre** is the instrument. The tablets are the dative plural surface **on ðæm stānenum tabelum**, with stānen specifying stone material. Do not reinterpret tables as furniture or make God's finger the thing written.

Cook 42

Keep the complete supplied frames available, especially the genitive harper phrase, the 144,000 exception, the collective company description and the blessing formula. Their unfamiliar components are not separate recall tests.

Cook 42.1

Đæs geongan mannes lufu befēoll on ðæt mæden.

Cook's prompt: The young man fell in love with the girl (p. 175, l. 20; cf. mīn lufu befielð on ðē, 'my love falls on thee,' 'I fall in love with thee').

Target and explanation: The supplied idiom makes **lufu**, love, the grammatical subject; **ðæs geongan mannes** is its genitive possessor. **On ðæt mæden** is the accusative person toward whom the love falls. **Befēoll** retains the exercise's be-prefix and the checked long past vowel. A translation with the man as literal falling subject misses the idiom, even if modern English says "the man fell in love."

Cook 42.2

Ic hīerde ðāra hearpera stefne mid hiera hearpum hearpiendra; and hīe sungon nīwne sang beforan ðǣm ðrymsetle and ðǣm fēower nīetenum; and nān mann ne meahte ðone sang leornian būton ðæt hundtēontig and fēowertig and fēower ðūsendo.

Cook's prompt: I heard the voice of harpers harping with their harps; and they sung a new song before the throne, and before the four beasts; and no man could learn that song except the hundred and forty and four thousand.

Target and explanation: The speaker hears; the harpers harp and sing. **Hearpera** and **hearpiendra** are genitive plural around accusative **stefne**; **hiera hearpum** is dative after mid. The new song is accusative **nīwne sang**; **ðone sang** refers back to it. Preserve the throne, four beasts and negative learning clause. The whole **būton … ðūsendo** expression supplies exactly 144,000; neither its ordering nor its unfamiliar shapes are recall tests. Do not label that whole exception dative or derive a general būton case rule from it.

Cook 42.3

Ic geseah swā micle męnigu swā nān mann gerīman ne mæg, of eallum ðēodum and of ælcre mægðe, standende beforan Godes ðrymsetle, ealle mid hwītum gegierelum gescrȳdde and palmtwīg on hiera handum healdende.
Cook's prompt: I saw so great (om. a) company (męnigu), as no man can number (gerīman), of all nations and of every tribe (mægð), standing before the throne (ðrymsetl) of God, all clothed (gescrȳdan) with white garments (gegierela), and holding palm-twigs (palmtwīg, 47) in their hands.
Target and explanation: The seen company, **micle męnigu**, is accusative feminine singular. The subsequent people stand, are clothed, and hold palm twigs; **ealle**, plural **gescrȳdde**, and **hiera** refer to the members by sense. Keep both origin phrases and all three descriptions. **Palmtwīg** is accusative plural despite its zero ending. This complete supplied collective construction does not establish a general freedom to mix singular and plural agreement.

Cook 42.4

And hīe sungon mid hlūdre stefne: Hælu sīe ūrum Gode, ðe ofer his ðrymsetle sitt.
Cook's prompt: And they sang with (om. a) loud (hlūd) voice, Be salvation (om. to) our God which sitteth upon (ofer, 166) his throne.
Target and explanation: The singers are plural, but the embedded praise is **Hælu sīe ūrum Gode**, with God as dative recipient and singular sīe. **Mid hlūdre stefne** gives the loud manner of singing. In the relative, God is the singular subject of **sitt**, and the prescribed **ofer his ðrymsetle** is dative. Keep the praise formula rather than substituting an unrelated rescue event.

Cook 42.5

And ealle ęnglas stōdon on ymbhwyrfte his ðrymsetles and Gode āluton, ðus cweðende:
Cook's prompt: And all (om. the) angels stood round about [in circuit of] his throne, and bowed (ālūtan, 103) to God, thus saying,
Target and explanation: The angels stand in the circuit of the throne and bow to dative **Gode**. **Āluton** is the plural strong preterite of the intransitive bow verb, not the transitive bend verb used in 42.8. The complete supplied **ðus cweðende** accompanies their actions and introduces the following speech. It is a participle, not an additional finite verb with its own tense. Its accompanying-speech construction is not an independent recall target.

Cook 42.6

Ūrum Gode sīe blētsung and beorhtnes, wīsdōm and ðancung, weorðscipe and stręngðu, ā ā ā.
Cook's prompt: Be (om. to) our God blessing and brightness, wisdom and thanksgiving (ðancung), dignity and strength, for ever and ever.
Target and explanation: Retain all six coordinated qualities: blessing, brightness, wisdom, thanksgiving, dignity and strength, together with the dative recipient and perpetuity formula. The supplied doxology has singular optative **sīe**. Its local formula does not establish a universal singular-agreement rule for every list of subjects. Omitting a near-synonym still loses a requested element.

Cook 42.7

Foxas habbað holu, and heofones fuglas nest; sōðlice Mannes Sunu næfð hwǣr hē his hēafod āhylde.
Cook's prompt: Foxes (fox, 43) have holes (hol, 47), and the birds of heaven nests (nest, 47); but (sōðlice) the Son of Man hath not where (hwǣr) he (om. may) lay (āhyldan, 113) his head.
Target and explanation: Holu and **nest** are different neuter accusative plural patterns; the second possession clause shares the first clause's have. **Næfð hwǣr ... āhylde** supplies the negative indefinite-place frame: he has no place where he might lay his head. **Āhylde** is present subjunctive third singular, without a separate may. **Hwǣr** is dependent here, not a direct question asking where he is.

Cook 42.8

Đā cęmpan wundon cynehelm of ðornum and sętton on his hēafod and hrēod on his swīðran, and bīegdon hiera cnēo beforan him, ðus cweðende: Hāl bēo ðū, Iudea cyning!

Cook's prompt: The soldiers platted (windan, 104) (om. a) crown of (of) thorns (ðorn, 43), and placed on (172) his head, and a reed (hrēod, 47) in his right (om. hand), and bowed their knee before him, thus saying, Hale be thou, King of the Jews (Iudea).

Target and explanation: The soldiers plait, place, and bend their knee; keep each action and the shared crown object where the English omits repetition. **Of ðornum** gives material; **on his hēafod** is the placement goal. The supplied **on his swīðran** names his right hand without restoring the omitted noun. **Hiera cnēo** retains the singular knee in the prompt. The complete supplied **ðus cweðende** accompanies the soldiers' actions and introduces their words; independent recall of that construction is not assessed. The final salute addresses one man as King of the Jews; it is the soldiers' speech, not the narrator's approval.

Cook 42.9

And hīe spǣtton on hine and nōmon hrēod and bēoton his hēafod.

Cook's prompt: And they spit (spǣtan, 113) on (on, 172) him, and took (om. a) reed and smote (bēatan) his head.

Target and explanation: The same plural subject performs three past actions: **spǣtton**, **nōmon**, **bēoton**. **On hine** is the target of spitting; **hrēod** is the reed taken; **his hēafod** is the direct object struck. Preserve that change of object. Bēatan means beat/strike here; replacing it with a killing sense would add an outcome the prompt does not state.

Cook 43

Cook 43.1

*Æ*lc flǣsc is gærs, and ðæs flǣsces wuldor is swilce ðāra wyrta blōstma.
Cook's prompt: All [each] flesh is grass, and the glory (wuldor) of the flesh is like [as if] the blossom of herbs.
Target and explanation: *Æ*lc flǣsc is gærs retains the each-flesh/grass image. **Ðæs flǣsces wuldor** is the glory of the flesh, compared by **swilce** with the blossom of the plants. The whole figurative comparison is supplied. “Human life is brief” can explain an implication but is not a complete translation of both clauses. See A05 for the distinction between their structures.

Cook 43.2

Nān mann ne hīerde his stefne on strǣtum.
Cook's prompt: No man heard (183) his voice in (om. the) streets.
Target and explanation: Nān mann ne hīerde is one negation: no one heard. **His stefne** is the accusative thing heard, while **on strǣtum** is the dative place, without the expressly omitted article. The negative words do not cancel one another. A paraphrase that restores the article may convey the meaning but misses the omission target.

Cook 43.3

Cleopa and ne geswīc ðū; āhęfe ðīne stefne swā-swā bieman.
Cook's prompt: Cry (cleopian), and cease thou not, lift up (āhębban) thy voice like (swā-swā) (om. a) trumpet.
Target and explanation: Keep all three singular commands: cry, do not cease, lift up the voice. **Cleopa** uses the cry-aloud sense; **ðīne stefne** is accusative. **Swā-swā bieman** is the supplied elliptical trumpet comparison. The exact comparative cue remains visible. It compares the lifted voice to the trumpet image; it does not replace voice by an actual trumpet as the command's object.

Cook 43.4

Hlǣfdige, hwider gǣst ðū?
Cook's prompt: Lady, whither goest thou?
Target and explanation: Hlǣfdige addresses the lady; **hwider** asks direction, whither. **Gǣst ðū** is second-singular present. A static where-question would change the requested destination sense, while a plural verb would change the addressee's number.

Cook 43.5

Đū dēst yfele.
Cook's prompt: Thou doest ill (yfele).
Target and explanation: Dēst is second-singular present, and **yfele** is the adverb ill/badly, describing the action. The sentence says that the addressee acts badly; it is not a predicate-adjective construction requiring an adjective to agree with thou.

Cook 43.6

Hē dyde yfele, for-ðon-ðe hē tǣlde ðā cwēn, ðæs cyninges dohtor.
Cook's prompt: He did ill, because he censured the princess, the king's daughter.
Target and explanation: Both **dyde** and **tǣlde** are past singular, connected causally. **Ðā cwēn** is the selected endingless accusative with the specifically taught princess sense. **Ðæs cyninges dohtor** identifies that princess in apposition. Rendering her merely as a queen would lose the contextual sense even though the headword can bear it elsewhere.

Cook 43.7

Hīe nǣfre gerīmcræft wel ne leornodon.
Cook's prompt: They never learned arithmetic well.
Target and explanation: Leornodon is preterite plural. **Nǣfre … ne** supplies never, and **wel** retains the quality of the learning. **Gerīmcræft** is arithmetic, not any unspecified learning. Neither the two negative expressions nor the later adverb cancels the negative scope.

Cook 43.8

Gē witon sōna hwæt gē gīet ne witon.
Cook's prompt: You (plur.) will soon know what you do not yet know.
Target and explanation: Both subjects are plural **gē**, so both finite verbs are **witon**. The first present has future reference with soon; the second, with **gīet ne**, states what is not yet known. The dependent **hwæt** clause is the content of that knowledge. No future auxiliary or independently recalled contracted nytan form is required.

Cook 43.9

Plega mid ðoðore!
Cook's prompt: Play (with) ball!
Target and explanation: Plega is the selected singular command; **mid ðoðore** is the dative ball used in the play frame. The English prompt does not fix the number of listeners, so an accurately formed plural command is also defensible with that setting. The parenthetical with is an English construction cue, not an OE dictionary form or a demand to invent a different ball noun.

Cook 43.10

Ic nān ðing ne ete, ðēah ðe ōðre męnn eten and blīðe sīen.
Cook's prompt: I eat nothing, although other men eat and are merry.
Target and explanation: The speaker's **ne ete** is first-singular present indicative under nān ðing. The others have third-plural **eten** and **sīen**, present subjunctives in the admitted concession. This mood does not say that they fail to eat or be merry. The supplied **ðēah ðe** is the conjunction although; its second element is not a relative pronoun meaning who.

Cook 43.11

Ic gewilnie ðæt ic of ēow ðæt andgiet leornie ðe gē habbað.
Cook's prompt: I desire to learn [that I may learn] from you the knowledge that you have.
Target and explanation: Ic gewilnie introduces the explicitly requested finite content clause, with first-singular subjunctive **leornie**. **Of ēow** names the plural people from whom the speaker learns. The knowledge is the antecedent of **ðe**, with **gē habbað** in the relative. An infinitive could express a desire to learn in another construction but misses the bracketed finite-clause target here.

Cook 43.12

Cēos hwilc hiera ðū wille.
Cook's prompt: Choose which of them you (sing.) will.
Target and explanation: Cēos commands one addressee. **Hwilc** represents the choice; **hiera** is a partitive genitive, of them. **Wille** is present subjunctive second singular in the indefinite choice clause. It is not an English-style future auxiliary, and the genitive is not an adjective agreeing with the selected object.

Cook 43.13

Binnan fēawum tīdum cōmon twēgen gelǣrede and æðelborene męnn him tōgēanes.
Cook's prompt: Within a few hours, two educated and high-born men came toward him.
Target and explanation: Binnan fēawum tīdum supplies the temporal limit. **Twēgen** agrees with masculine **męnn**; both **gelǣrede** and **æðelborene** are plural descriptions of those men. Gelǣrede is the already taught lexical adjective educated/trained. The complete supplied **him tōgēanes** expresses motion toward him, with a dative complement before the preposition; independent recall of this construction is not assessed. Keep both education and birth.

Cook 43.14

Ic gierne ðære æðelan fæmnan.
Cook's prompt: I woo the illustrious maiden.
Target and explanation: Gierne is first-singular present in the marriage-seeking sense. **Ðære æðelan fæmnan** is the genitive maiden wooed, with weak adjective agreement. An accusative inferred from the modern English transitive verb would miss the taught giernan government. Familiar desire vocabulary alone would not establish this particular wooing sense.

Cook 43.15

Wē ealle sęcgað ðæt nān mann hēr Gode swā gecwēme sīe swā hē.
Cook's prompt: We all say that no one here is (194. b) so acceptable to God as he.
Target and explanation: Wē ealle are the plural speakers. Within their report, **nān mann** is singular and **sīe** is present subjunctive third singular, as the source reference directs. The complete supplied **Gode swā gecwēme** gives dative **Gode**, the person to whom acceptable; independent recall of that adjective's government is not assessed. **Swā … swā hē** preserves the degree comparison with him. The subjunctive reports their judgment without proving that it is false; the negative stays inside the reported clause. **Nān** supplies negation here; the earlier negative-concord pattern with **ne sīe** is also valid.

Cook 43.16

*Æ*rest hē wēnde ðæt hine man slōge.
Cook's prompt: At first he thought that he should be slain [that one should slay him].
Target and explanation: Hē is the thinker, while indefinite **man** is the singular actor inside the reported clause and **hine** its accusative victim. **Slōge** is past subjunctive in the expected killing. An appropriate passive could preserve the broad meaning, but the explicit bracketed target requires this active impersonal formulation. The sentence does not assert that the killing occurred.

Cook 43.17

Wē ealle feallað tō ðīnum fōtum.
Cook's prompt: We all fall at (tō) your (sing.) feet.
Target and explanation: Wē ealle feallað is first-plural present. **Tō ðīnum fōtum** has the dative plural feet but a singular addressee as their possessor. The contextual gesture is falling at that person's feet. A plural possessive would change the addressee, not merely agree more fully with plural fōtum.

Cook 43.18

Ic ne gelīefe ðæt ðū mīn wīf sīe.
Cook's prompt: I (om. do) not believe that you are (194. b) my wife.
Target and explanation: The speaker negates believing, **ic ne gelīefe**, without translating English do. In the content clause **ðū** controls second-singular subjunctive **sīe**; its spelling also serves other persons, but its subject fixes the analysis here. **Mīn wīf** is the predicate wife. Negated belief is not itself a proof that the reported proposition is false.

Cook 43.19

Hwǣr is mīn wer?
Cook's prompt: Where is my husband?
Target and explanation: Hwǣr asks location, with singular **is**. **Mīn wer** is the speaker's husband in the newly taught spouse sense. Whither would change a location question to one of direction; generic man alone would leave out the marital relation.

Cook 43.20

Ic lifde endleofan gēar on Ægypta lande.
Cook's prompt: I lived eleven years in the land of the Egyptians.
Target and explanation: Lifde is preterite first singular with ic. **Endleofan gēar** is the accusative duration, eleven years. **On Ægypta lande** is dative location with the supplied genitive plural ethnonym, "in the land of the Egyptians." The duration is not another location, and the foreign people's name is not a test of an independently reconstructed ethnic paradigm.

A. Figurative meaning

A05

Task: After translating Cook 43.1, analyse both images. Keep your complete translation beside the English prompt and the supplied vocabulary.

Identify the two things joined by the first copular image and explain its contextual force.

The first clause identifies **ælc flǣsc**, each/all flesh, with **gærs**, grass, through **is**. In context the physical image suggests human frailty and transience. Calling the clause metaphorical does not remove either noun from its translation.

Identify the second comparison and distinguish its structure from the first.

The second compares the flesh's **wuldor**, glory, with the plants' **blōstma**, blossom, using **swilce**. The first is a copular identification; the second marks an explicit comparison. Both flesh/grass and glory/blossom must remain. No separate hypothetical event is asserted merely by the English help "as if."

Explain why Human life is brief alone is not a complete translation of 43.1.

"Human life is brief" may summarize an implication, but omits both images, the reference to glory, and their different grammatical constructions. A complete translation retains what is said and then may explain its force. Interpretive paraphrase alone does not answer the composition task.

A06

Task: Using Cook 37.14 and 40.9 and the printed lexical help, explain how context narrows the meanings of horn and seed. Retain the actual images in translation.

For 37.14, distinguish the horn image from a report about a literal animal.

In 37.14 raising the **horn** can be understood as exalting the people's strength or power in the praise context. This interprets the image while retaining literal horn in the translation; it does not independently establish a replacement dictionary gloss. The clause is not a report about a literal animal.

For 40.9, explain what seed denotes and identify whose seed it is.

In 40.9 **his sǣde** denotes Abraham's offspring or descendants collectively. The possessor is Abraham, not the speaker or God. “His seed” preserves the image; “his descendants” explains the newly taught collective sense. This analysis task keeps the lexical help available.

State what the familiar inflection alone cannot establish in these two examples.

Recognizing a noun's case or paradigm does not determine its contextual sense. The same familiar shape could occur in a literal horn or agricultural seed context. Here context guides interpretation of the horn image, while seed requires its newly taught collective meaning and the correct possessor. The task's help remains available; an ending alone establishes none of these choices.

R. The music performance

R01

Task: Translate the complete assigned reading in the three stated divisions, keeping all local help available.

Translate 174.7–174.13, through tǣlst.

Then she went out and ordered her harp to be fetched. And as soon as she began to play the harp, she mingled its sound with pleasant singing. Then all the men began to praise her for her musical skill; Apollonius alone remained silent.

Then the king said, "Apollonius, now you are behaving badly, because all the men praise my daughter for her musical skill, and you alone, by remaining silent, criticize her."

Points to retain: she orders the harp fetched; she combines song and harp; Apollonius alone is silent; the king treats that silence as criticism. "Had her harp fetched" is equivalent. Saying that she fetched it herself changes the causative wording.

Translate 174.14–175.2, through wel gelǣred.

Apollonius said, "O good king, if you permit me, I will say that I understand that your daughter has indeed chanced upon music, but has not learned it well. Now order the harp to be given to me, and then you will know what you do not yet know."

King Arcestrates said, "Apollonius, I recognize indeed that you are well trained in all things."

Points to retain: gelīefst grants permission to speak. **Mē** in the following harp command is the recipient, not the commanded giver. The daughter has chanced upon music but has not mastered it. "Then you will know what you do not yet know" preserves the future consequence; no contrary-to-fact condition is asserted.

Translate 175.3–175.17, through the final forðtēah.

Then the king ordered the harp to be given to Apollonius. Apollonius then went out, dressed himself, put a royal crown on his head, took the harp in his hand, and went in. He stood in such a way that the king and all those sitting around supposed that he was not Apollonius, but Apollo, the god of the heathens. Then stillness and silence fell within the hall.

Apollonius took his plectrum and began skillfully to set the harp strings in motion. He mingled the harp's sound with pleasant singing. The king

himself and everyone who was present cried out loudly and praised him. After this Apollonius set down the harp and acted, presenting many fine performances there that were unfamiliar and unusual to the people. Each of the things he performed greatly pleased them all.

Points to retain: the king has the harp handed to Apollonius; Apollonius dresses and performs; the audience supposes him to be Apollo. The final verbs describe setting down the harp, acting, and presenting performances. "Things" may replace "performances" if their context is clear. The source's singular **ungecnāwen wæs** is retained in analysis even where idiomatic English uses a plural relative.

R02

Task: Identify each referent and the grammatical evidence. Use the supplied source notes; say when context is needed.

Give the referent of hēo in 174.7.

Hēo is the king's daughter. Its feminine singular form is compatible with that referent, but the preceding context identifies the particular woman. The form alone does not name her.

Give the referent of hine in 174.16 and its role.

Hine refers to masculine **swēgcræft**, musical art. It is the accusative object of **geleornod** in the negative perfect: she has not learned it well. Masculine grammatical gender does not make the referent the king or Apollonius.

Give the referent of hē in the reported clauses 175.7–8.

Both instances of **hē** refer to Apollonius, the man whom the audience sees. The clauses report their supposed identification: not Apollonius, but Apollo. They do not change the actual referent into a god.

Give the referent and case of him eallum in 175.16–17.

Him eallum refers to all the listeners and is dative plural, the people pleased by the performances. Context supplies the group; the dative construction with **līcode** supplies their experiencer role. They are not its grammatical subject.

R03

Task: Identify the clause relationship in each cited expression and distinguish it from a similar construction elsewhere.

Classify sōna swā 174.8 and explain its time relation.

Sōna swā introduces "as soon as." The start of the harp playing is immediately accompanied by the blending of harp sound and song. Here swā is part of the supplied temporal expression, not an assertion that two performers are equally skilled.

Classify gif 174.14–15 in its context.

Gif ðū mē gelīefst is an open permission condition: "if you permit me [to speak]." **Gelīefst** is present indicative second singular; the following **ic sęcge** states what the speaker will say. It is neither a request to believe a proposition nor a condition assumed contrary to fact.

Classify swā … ðæt 175.6–7.

In **swā stōd ðæt**, the manner or degree of his stance/appearance leads to a result: the audience takes him for Apollo. This **swā … ðæt** is not the equal-degree **swā … swā** of C02 or the temporal sōna swā at the reading's beginning.

Explain why the two ðæt clauses 175.7–8 do not assert that Apollonius actually is Apollo.

The two clauses are the contents of **wēndon**, "they supposed": that he was not Apollonius and that he was Apollo. **Nære/wære** are past subjunctives in that report. The stated thought explains the mistaken identification; the narrator does not assert an actual transformation.

R04

Task: Analyse the supplied participial and predicate expressions without changing the source spelling.

Explain swīgende 174.13 using original note 12a.

Original note 12a says "For **swīgiende**." Printed **swīgende** is a present participle: remaining silent accompanies the addressee's censure. It is not an independent finite verb. Preserve the edition's swīgende in the source and identify the supplied expansion in analysis.

Explain the referent of ðā ymbsittendan 175.7.

Ðā ymbsittendan means the people sitting around, the spectators or bystanders. It is a weak nominalized present-participle expression. Together with the king, they supply the plural subject of **wēndon**; no actual people noun need be restored to the text.

Account for singular ungecnāwen wæs and ungewunelic 175.16.

The source construes the display of **fela fægerra ðinga** collectively in the following singular predicate **ungecnāwen wæs and ungewunelic**. Retain that wording and its supplied local explanation. It does not license a universal rule making every plural subject singular, nor does a smoother English plural authorize silently changing the Old English.

Identify the subject of līcode 175.17 and distinguish it from him eallum.

The subject is **ælc ðāra ðinga**, each of those things, hence singular **līcode**. **Him eallum** is dative plural, the people to whom each performance was pleasing. Its plurality does not control the verb.

R05

Task: Separate literal wording from the contextual performance sense in each expression, using the local help and original notes.

Explain gefēoll on swēgcræft 174.16.

The image is of falling upon musical art; original note 15 gives the contextual translation “has chanced.” Here the daughter has chanced upon or taken up music without learning it well. Treating **on swēgcræft** as a physical place into which she fell would miss the supplied idiom.

Explain plegode and forðtēah 175.15.

Plegode means acted or performed; **forðtēah** means presented the performances. Original note 6 connects the passage with comic and tragic acting, while note 8 supports the presentation sense. “Played” can work in a clearly theatrical English rendering; playing a ball game or literally drawing objects forward does not express this scene. The Latin note is explanatory evidence, not extra wording to insert into the OE translation.

Explain the function of Apollines 175.8.

Apollines identifies Apollo, as original note 2 states. It is the name used in what the spectators suppose. Preserve that reported identification and the source form; do not mistake it for a second occurrence of Apollonius's name or claim that the man really became Apollo.

R06

Task: Explain the argument of the episode from the actual Old English.

State the difference between the king's reading of silence and Apollonius's explanation.

The king treats Apollonius's silence as blame and therefore as bad conduct toward his daughter. Apollonius explains a technical judgment: she has encountered music but has not learned it well. He seeks permission to speak and offers a demonstration, rather than denying that his silence conveys criticism.

Identify two kinds of evidence by which Apollonius answers the criticism of his conduct.

He demonstrates skilled harp playing joined with pleasant song, then displays further striking performances after putting down the harp. The listeners respond by shouting praise and taking pleasure in what he presents. Equivalent answers can describe the two kinds of performance in their own words; a bare claim that he is talented does not identify the evidence in the passage.

Explain how the final sentence combines novelty with approval.

The performances are unfamiliar and unusual to the people, yet each greatly pleases all of them. Novelty and approval coexist. "Unknown" does not mean bad or displeasing here, and the final dative experiencers identify the approving audience.

[1]: Cook, *Exercises in Old English* (1895), XII, XIII.37–43, printed pp. 22–28 (PDF 30–36); *A First Book in Old English*, second edition (1895), especially §§55, 153–166, 183, 188, 194–197 and Reader XII, 174.7–175.17 (PDF 190–191). Individual line references count physical prose lines from the edition's printed marginal anchors. The supplied 144,000 expression is independently attested in Bosworth–Toller, main dictionary p. 1082, **þūsend** I(2)(a), citing *Pastoral Care* 52; its acute length signs are represented by Cook-style macrons. The readings and original note numbers remain those of the selected editions.

UNIT 18

Answer key

The composition models are new teaching material. They retain Cook's complete Exercises 44–48 under his joint group **XII, XIII**. The connected reading is the separate Apollonius passage, and its translation was prepared independently from the actual Old English before comparison with other complete translations. Each model is one defensible answer; a different grammatical answer can still miss an explicit lexical, mood, number, omission or order target.[1]

Preserve every participant, action, time relation and clause connection. Except where an order is specified, other grammatical orders are acceptable. English translations and analyses may use equivalent precise wording. Documented variants, such as **ðām** beside selected **ðǣm**, are not automatically errors; tasks that expressly require the selected forms still test those forms. The notes below identify the distinctions most likely to change the meaning.

The original hints and complete local help remain available. A copied supplied form is not independent recall of an unassigned paradigm. In particular, source names, quantities, rare reading frames and the combined counterfactual in 44.7 are used with their help visible. A simple preterite may render English "did," "has done" or "had done" where the context establishes the relation; a subjunctive in a report does not by itself make the report false.

A. Clauses and reference

A01

Task: Analyse the two sentences. No further context identifies the reader.

Input: Se cyning sealde ðǣm męnn ðā bōc. Hē hīe rædde.

Identify the giver, recipient and thing given.

The king gave the book to the man. **Se cyning** is the nominative giver, **ðǣm męnn** the dative singular recipient, and **ðā bōc** the accusative singular gift. The article and giving frame identify męnn as singular dative here; its resemblance to a plural form does not make several recipients.

Give the referent and case of hīe.

Hīe is feminine accusative singular, referring to **bōc**, the book read. Grammatical gender allows the same pronoun to refer to an inanimate feminine noun; "it" is the natural English rendering. Reading it as "they" would also conflict with its object role here.

Which named people can hē refer to? Explain what the forms establish.

Either the king or the man can be the reader. Both are masculine singular and can be resumed by nominative **hē**, the subject of **rædde**. The stated absence of further context leaves that choice unresolved. Neither proximity to męnn nor continuity with the earlier subject is a grammatical requirement.

Rewrite only the second sentence so that the recipient is explicitly the reader.

Se mann hīe rædde.

The man is now the explicitly named nominative subject; **hīe** still refers to the book as the accusative object. The result means "The man read it." A grammatical rearrangement may preserve those roles, but retaining hē alone leaves the ambiguity that the task asks you to remove.

A02

Task: Convert this direct statement into a report. Retain the king as the person who saw the man; use sęcgan with a ðæt clause and a preterite subjunctive in that clause.

Input: Se cyning cwæð: "Ic geseah ðone mann."

Input: sęcgan

Input: ðæt

Identify the referent of ic and the time of the seeing relative to the quoted statement.

Ic is the king, the speaker inside the quotation. **Geseah** presents his seeing as earlier than his quoted statement: "I saw the man." It does not refer to the narrator who introduces the quotation.

Write the complete reported statement.

Se cyning sægde ðæt hē ðone mann gesāwe.

"The king said that he had seen the man." **Sægde** introduces reported content; **hē** keeps the king as the seer, and **gesāwe** is preterite subjunctive third singular. **Ðone mann** remains the accusative person seen. Repeating se cyning inside the clause can make the reference explicit. An indicative

report can be valid language, but does not meet this task's requested subjunctive.

Explain whether the chosen subjunctive proves that the king's statement is false.

No. Here the subjunctive presents the reported content and does not establish its truth or falsity. The seeing is earlier because of the original statement's temporal viewpoint, not because every preterite subjunctive must express an earlier event or a false proposition.

A03

Task: Analyse the sentence, then replace the men by the man and keep the king singular.

Input: Dā męnn ðe ðone cyning gesāwon, sungon.

Translate the complete sentence.

"The men who saw the king sang." "The men that saw the king sang" has the same meaning. The men perform both actions; the king is the person seen, not a seer or the singer.

Identify the role represented by ðe and explain the agreement of both finite verbs.

Ðe represents the men as the subject of **gesāwon**, preterite indicative third plural. The main subject **ðā męnn** governs **sungon**, also preterite indicative third plural. **Ðone cyning** is accusative singular inside the relative clause and controls neither verb's number.

Write the complete singular version.

Se mann ðe ðone cyning geseah, sang.

"The man who saw the king sang." **Se mann** replaces the plural subject; **geseah** and **sang** are third singular. The object **ðone cyning** stays singular. Changing only one finite verb would leave the other action attached to an unrequested plural subject.

C. Composition

C01

Task: Translate: The man whom the king saw gave the servant the book. Use ðe and sęllan.

Input: ðe

Input: sęllan

Write one complete Old English sentence.

Se mann ðe se cyning geseah, sealde ðǣm cnihte ðā bōc.

The man is the main nominative subject of **sealde**. Inside the relative, **se cyning** is the subject of **geseah**, and invariant **ðe** represents the man as its accusative object. **Ðǣm cnihte** is the servant receiving the accusative book. Word order may vary while those roles remain clear; making the king give the book changes the meaning.

C02

Task: Translate: The king ordered the men to give the servant the books. Use hātan and a plain infinitive of sęllan.

Input: hātan

Input: sęllan

Write one complete Old English sentence.

Se cyning hēt ðā męnn ðǣm cnihte ðā bēc sęllan.

The king commanded the men to give the servant the books. **Hēt** has accusative **ðā męnn** as the instructed actors of plain infinitive **sęllan**. The servant is the dative recipient and **ðā bēc** the accusative plural gift. Although męnn has the same spelling in nominative and accusative plural, it is accusative in this construction. A finite plural verb in place of sęllan misses the requested infinitive frame.

F. Forms and grammatical roles

F01

Task: Translate each sentence, then explain the selected ending contrast. Use the newly taught words for ass, sack and wheat.

The ass has the sack.

Se assa hæfð ðone sacc.

Se assa is nominative singular; **ðone sacc** is the accusative singular possession. **Hæfð** agrees with the one ass. The weak noun's nominative assa must not be replaced by oblique singular assan.

The asses have the sacks.

Đā assan habbað ðā saccas.

Đā assan is weak nominative plural; **ðā saccas** is strong accusative plural. **Habbað** agrees with the plural possessors. The requested two noun patterns differ: an invented strong plural of assa would miss its paradigm.

The men give wheat to the asses.

Đā męnn sęllað ðǣm assum hwǣte.

The men are the nominative plural givers and govern **sęllað**. **Đǣm assum** is dative plural, the recipients; **hwǣte** is the accusative mass singular thing given. Grammatical changes of object order are possible. Making the asses the things given, or inventing a count plural of wheat, changes the required relations.

The wheat is in the sacks.

Se hwǣte is on ðǣm saccum.

The mass singular **se hwǣte** governs **is**. **On ðǣm saccum** gives a static location, hence dative plural. The several sacks do not turn the wheat into a plural subject or require a plural copula.

Compare the plural noun endings in the first three translations and the location phrase.

In the plural sentence, **assan** has the weak nominative plural ending **-an**, whereas **saccas** has strong accusative plural **-as**. Both classes have dative plural **-um**: **assum** as recipients and **saccum** after static on. Wheat remains mass singular. A shared dative ending does not make all the forms of the two declensions identical.

F02

Task: Translate the two sentences using the newly taught verb meaning need. Then explain the governed noun.

The man needs wheat.

Se mann beðearf hwǣtes.

Beðearf is present indicative third singular, agreeing with the man. The selected need frame governs genitive singular **hwǣtes**. English places "wheat" directly after "needs," but that does not determine its Old English case.

The men needed wheat.

Đā męnn beðorfton hwǣtes.

Beðorfton is preterite indicative third plural: the men needed wheat. **Hwǣtes** remains genitive mass singular. Present plural **beðurfon** would give the right subject number but the wrong time.

Identify the tense and number of each finite verb, and explain the case of wheat in both sentences.

Beðearf is present indicative third singular; **beðorfton** is preterite indicative third plural. **Hwǣtes** is genitive singular in both because beðurfan governs the thing needed in this selected frame. Changing the subject's number does not change the mass noun's number or its government. Other attested government does not meet this exercise's genitive target.

F03

Task: Translate the four sentences using the newly taught verbs meaning recognize and undo/open. Then explain the roles and number changes.

I recognize the king.

Ic oncnāwe ðone cyning.

Oncnāwe is present indicative first singular. **Ðone cyning** is the singular accusative person recognized. The long ā belongs to this present stem; a past form would change "recognize" to "recognized."

We recognized the king.

Wē oncnēowon ðone cyning.

Oncnēowon is preterite indicative first plural, with the past **cnēow-** stem. Only the recognizers change number; **ðone cyning** remains one accusative person. Pluralizing the king would add a change the task does not request.

The man opens the sack.
Se mann undēð ðone sacc.
Undēð is present indicative third singular; the man opens the singular accusative sack. Its anomalous **dēð** stem must not be replaced by the infinitive undōn in a finite assertion.
The men opened the sacks.
Đā męnn undydon ðā saccas.
Undydon is preterite indicative third plural. Both subject and object are plural: **ðā męnn** opened **ðā saccas**. The preterite **dyde-** system is distinct from present undēð; keeping the singular object or present tense would miss part of the change.

Identify the direct objects and explain which words change when the subject, object or tense changes.

The king is the accusative singular object in both recognition sentences. The sack and sacks are accusative objects in the opening sentences. Subject person and number determine finite agreement, and the requested time determines the verb stem; object number determines its own article and noun. The nearer object does not govern the verb's person or number.

Cook 44

Cook 44.1

Iacob cwæð tō his sunum: Gāð and bycgað ūs sumne dǣl mętes.
Cook's prompt: Jacob (Iacob) said to his sons, Go and buy us a certain amount of food (męte).
Target and explanation: Gāð and **bycgað** are plural commands to the sons. **Ūs** is dative beneficiary, "for us"; **sumne dǣl męte**s is the accusative amount bought, with genitive męte**s** specifying the food. The amount phrase, not a bare nominative food noun, preserves "a certain amount." Jacob's quoted commands must not become a narrative that the sons already went and bought.

Cook 44.2

Đā cwæð Iudas: Đæs landes ealdor swōr āðas ætforan ūs ðæt wē ne mōsten cuman ætforan him, būtan wē ūrne gingstan brōðor mid ūs bringen.
Cook's prompt: Then said Judah (Iudas), The chief of the land swore oaths before us that we should not (mōtan) come before him, except we bring our youngest brother with us.
Target and explanation: Judah reports the chief's oath. **Swōr** is past indicative; **mōsten** is first-plural past subjunctive in the reported prohibition, with plain **cuman**. It concerns permission to appear before the chief, not inability to travel. Supplied conditional **būtan** introduces the exception, and **bringen** keeps the brothers as first-plural subject. **Ūrne gingstan brōðor** is the accusative companion brought; the chief remains singular **him**, dative after **ætforan** even with **cuman**.
Supplied construction: The learner is given **ætforan ūs** and **cuman ætforan him**, both with dative complements. The preposition determines the case; movement alone does not license **hine** here.

Cook 44.3

Gif ðū hine mid ūs sęndan wilt, wē gāð ætgædere and bycgað ðā ðing ðe wē beðurfon.

Cook's prompt: If thou wilt send him with us (verb last), we (om. will) go together and buy the things that (87. d) we need (beðurfan, 131).

Target and explanation: The stipulated final verb in the condition is **wilt**, governing plain **sęndan**. The two main presents **gāð** and **bycgað** have subject **wē** and express the proposed future actions without an added "will." **Đā ðing** is accusative object of buying; invariant **ðe** has the complement role required by **beðurfon** inside the relative. The selected need frame is genitive, although ðe displays no case ending. Treating both main verbs as commands changes the speakers' undertaking.

Cook 44.4

Gē earmlice wið mē dydon, ðā gē him sægdon ðæt gē mā brōðra hæfden.

Cook's prompt: Ye dealt ill (earmlice) with (wið) me, when ye said to him that ye had more (77) brethren (154).

Target and explanation: The complete supplied phrase **earmlice wið mē dydon** means "you dealt badly with me." Both **dydon** and **sægdon** agree with plural gē. **Hæfden** is second-plural past subjunctive in what they said; **mā brōðra** has a quantity word followed by genitive plural. It does not mean "more to the brothers," nor does the report's subjunctive establish that their statement was false.

Cook 44.5

Se mann āscode ūs ealle hwæðer ūre fæder lifde and hwæðer wē brōðor hæfden, and wē him andswarodon; wē ne wiston ðæt hē wolde giernan ðæs ðæt wē ūrne brōðor ðider lǣdden.

Cook's prompt: The man asked (āscian) us all whether our father was living [lived] and whether we had brethren, and we answered him; we knew not that he would (willan) desire (giernan) that (156. a), that we should bring (lǣdan, 194. b) our brother thither.

Target and explanation: **Ūs ealle** retains "us all." The two **hwæðer** clauses are indirect questions: whether the father **lifde**, and whether the speakers **hæfden** brothers. **Wiston** is plural past knowing; **wolde** presents the chief's contemplated desire. Retain **giernan ðæs ðæt**: genitive ðæs is the thing desired, and the following content clause explains it. **Lǣdden** is first-plural past subjunctive, with their brother as accusative object. Omitting either question, all, or the genitive demonstrative loses a source control.

Cook 44.6

Iudas cwæð: Sęnd ðone cnapan mid mē, ðæt wē mægen bycgan ðā ðing ðe wē beðurfon, ðæt wē ne forweorðen; būtan ic hine ęft hām bringe, sīe ic scyldig.
Cook's prompt: Judah said, Send the boy with me, that we may (mugan) buy the things that we need, that we perish (forweorðan) not; except I bring him back home, may I be (193. a) guilty (scyldig).
Target and explanation: Singular **sęnd** addresses Jacob. **Ðæt wē mægen bycgan** gives the purpose of sending the boy, and **ðæt wē ne forweorðen** gives the further purpose, avoiding starvation or death. The needed things retain the relative dependency explained in 44.3. In the new condition the subject changes to **ic**: **bringe** is first-singular present subjunctive, and **sīe ic scyldig** is the resulting self-imprecation, "let me be guilty." A simple indicative admission of guilt would lose that force.

Cook 44.7

Gif ðēos ęlcung nǣre, wē wǣren ōðre sīðe cumen.
Cook's prompt: Were it not for this delay [if this delay were not], we had [were, 188] come (om. a) second time (sīð, 176).
Target and explanation: Use the entire supplied counterfactual frame. **Nǣre** is negative past subjunctive third singular with "this delay"; **wǣren** is first-plural past subjunctive auxiliary with past participle **cumen**. Thus the result is "we would have come a second time," not merely "we were coming." **Ōðre sīðe** is adverbial instrumental singular under Cook 176; the noun hint sīð does not remove its ending. No article represents English "a." An ordinary accusative phrase or a finite reading of cumen misses the stipulated construction.

Cook 44.8

Đā cwæð Iacob: Gif gē nīede swā dōn sculon, dōð swā gē willað; nimað of ēowrum bętstum wæstmum on fatum, and bringað ðǣm męnn lāc, hunig and æcernu.

Cook's prompt: Then said Jacob, If ye needs (nīede, 176) must do so, do as ye will; take of (of) your best fruits in vessels, and carry (bringan) presents (om. to) the man, honey (hunig, 47) and acorns (æcern, 47).

Target and explanation: Nīede supplies necessity, while **sculon** governs dōn. The following **dōð, nimað, bringað** are plural commands. **Of ēowrum bętstum wæstmum** and **on fatum** use dative plurals; **ðǣm męnn** is the dative recipient without an added tō. **Lāc** is accusative plural "presents," despite matching its singular spelling; honey is mass singular and **æcernu** is the selected accusative plural "acorns." Do as you wish is not a statement that they have already acted.

Cook 45

Cook 45.1

Nimað ēowerne brōðor and gāð tō ðǣm męnn.
Cook's prompt: Take your (plur.) brother and go to the man.
Target and explanation: Nimað and **gāð** address the brothers collectively. The brother taken is singular accusative **ēowerne brōðor**, with the plural possessors expressed by ēowerne. **Tō ðǣm męnn** gives their destination. A singular command changes the audience; pluralizing brōðor changes the person they are to take.

Cook 45.2

And mīn Dryhten gedō hine glædne wið ēow, ðæt hē ēow ēowerne brōðor āgiefe, ðe hē mid him hæfð; ic eom nū mīnra bearna berēafod.
Cook's prompt: And my Lord make (gedōn) him gracious (glæd) toward (wið) you, that he may give (āgiefan, 196. f) you your brother, whom he hath with him; I am now bereft [despoiled] of my children (156).
Target and explanation: Gedō is a third-singular subjunctive wish, "may my Lord make him …," not an imperative addressed to the Lord. It has accusative **hine** and agreeing predicate **glædne**, here gracious toward them. Purpose **āgiefe** restores the accusative brother to dative **ēow**; the relative says that the chief presently has him. **Eom berēafod** is passive, with genitive **mīnra bearna**, what Jacob is deprived of. Changing that genitive to a nominative subject would reverse the deprivation.

Cook 45.3

Đā nōmon hīe ðā lāc and twīfeald feoh, and fōron tō Egypta lande tō Iosepe.
Cook's prompt: Then they took the presents and double (twīfeald) money (feoh, 47), and went to the land of the Egyptians to Joseph (Iosep).
Target and explanation: The brothers took both the presents and double money, then travelled to Joseph. **Nōmon** and **fōron** are third-plural preterites. **Twīfeald feoh** is accusative mass singular, not a plural count of coins; retain the source's ī and unmarked feoh. The whole supplied destination **tō Egypta lande tō Iosepe** distinguishes the land from Joseph as the person approached. It does not require an independently invented foreign-name declension.

Cook 45.4

Đā hē hīe geseah, ðā cwæð hē tō his gerēfan: Læd ðās męnn in, and gearca ūrne gebēorscipe, ðæt hīe mægen mid mē etan tō middes dæges.
Cook's prompt: When he saw them, then said he to (tō) his steward (gerēfa, 53), Lead in these men, and prepare our feast, that they may (mugan) eat with me at noon (tō middes dæges, 158; 166. 1).
Target and explanation: Joseph sees the men and speaks to one steward: **lǣd** and **gearca** are singular commands. In the purpose clause **hīe mægen etan**, the brothers become the third-plural subject; **mid mē** refers to Joseph. The supplied time phrase **tō middes dæges** means at noon, with genitive middes agreeing with dæges. The ability form is not a new finite "eat" form, and the noon phrase is not a command to use the ordinary dative after every tō.

Cook 45.5

And hē dyde swā him boden wæs.
Cook's prompt: And he did as he was commanded [was commanded him; cf. p. 177, l. 10].
Target and explanation: Hē dyde is the steward's action. **Swā him boden wæs** is the supplied impersonal command passive: "as was commanded him." **Him** remains dative addressee, not a nominative passive subject. Cook's cited parallel has hiere beboden wæs; the model uses the separately attested command sense of bēodan. A personal passive paraphrase may be possible, but this exercise expressly supplies the impersonal target.

Cook 45.6

Đā hīe ðær wæron, ðā wurdon hīe swīðe āfæred, and sægdon betwēonan him: For ðæm fēo ðe wē on ūrum saccum fundon, wē sindon hider in læded, ðæt hē ūs ūrra assena and ūrra ðinga berēafie, and ūs selfe ðēowie.

Cook's prompt: When they were there (ðær), then they became greatly frightened, and said to one another (betwēonan him), Because of (for) the money that we found in our sacks (sacc, 43), we (om. have) been led (62) in hither, that he may despoil us of our asses, and of our things, and enslave us (our)selves.

Target and explanation: The narrative's plural **wurdon … āfæred** describes the brothers becoming frightened; a predicative participle may remain uninflected. Inside their speech, **for ðæm fēo** is causal, and **on ūrum saccum** is static location. **Wē sindon … læded** preserves the passive without adding an English-style have; base læded is licensed with plural wē. **Berēafie** takes accusative ūs and genitive possessions **ūrra assena / ūrra ðinga**. **Ūs selfe** is the object of **ðēowie**, here enslave, not serve. Reversing those roles reverses their fear.

Cook 45.7

Đā cwædon hīe tō ðæm gerēfan: Lēof, wē biddað ðē ðæt ðū ūrre sprǣce hlyste; wē wæron hēr hwīlum ær and bohton ūs hwǣte.

Cook's prompt: Then said they to (tō) the steward, O sir, we pray (biddan) thee that thou hear (hlystan, 156) our speech; we were here a while ago and bought wheat (hwǣte, 44) for ourselves (161; 184. a).

Target and explanation: Lēof addresses the steward. **Biddað** is an assertion with wē, "we beseech," although the spelling can also occur in a command. **Ðē** is the person beseeched; **ðū** is subject of subjunctive **hlyste**, which governs genitive **ūrre sprǣce**. **Bohton ūs hwǣte** means "we bought wheat for ourselves": ūs is benefactive/reflexive dative, wheat the accusative object. The source gives no instruction to omit "for ourselves." Confusing the two pronouns' roles or making the speech accusative misses the assigned government.

Supplied construction: Lēof means "sir" in this supplied respectful address, and **hwīlum ær** means "a while ago." These bounded uses are given beside the task; they are not tests of the earlier senses "dear" and "sometimes." A grammatical alternative preserving respectful address and earlier time may also satisfy Cook's prompt.

Cook 45.8

Đā wē cēapodon and hāmweard wǣron, ðā undydon wē ūre saccas; ðā fundon wē ðæt feoh ðǣron ðe wē ǣr sealdon.
Cook's prompt: When we had trafficked (cēapian) and were on the way home (hāmweard wǣron), then we undid (undōn) our sacks; then we found the money therein which we had given (see ǣr, adv.).
Target and explanation: The first **cēapodon** and later **sealdon** are simple preterites with the anterior meanings "had traded" and "had given"; **ǣr** makes the earlier payment explicit. **Hāmweard wǣron** is the supplied homeward frame. **Undydon** says that the speakers opened their sacks; **fundon** then states their discovery. **Đe** refers to the money previously given, not the sacks. Adding a perfect auxiliary is unnecessary, while removing the earlier-payment relation loses part of the meaning.

Cook 45.9

Nū wē hit ęft brōhton, and ēac ōðer seolfor mid tō cēapianne; and wē ne witon hwā hit on ūre saccas dyde.
Cook's prompt: Now we have brought it back, and also other silver to traffic with [with to traffic]; and we know not who put (dōn) it into (on, 172) our sacks.
Target and explanation: Brōhton expresses the bringing back without requiring an auxiliary have. "Other silver" is a second object of that bringing; **mid tō cēapianne** is the supplied compressed instrument-and-purpose phrase, retaining the requested "with to trade" order. **Hwā** introduces the indirect question about the unknown person who **dyde** the money into the sacks. The movement/destination phrase **on ūre saccas** is accusative plural. Do not interpret the silver as a human trading partner or the final question as a new direct question.

Cook 46

Cook 46.1

Đā cwæð se gerēfa: Sibb sīe mid ēow; ne ondrædað ēow; ēower God and ēowres fæder God sealde ēow goldhord on ēowrum saccum.
Cook's prompt: Then said the steward, Peace be with you, fear (ondrædan, 184) ye not; your God and your father's God (om. hath) given you treasure in your sacks.
Target and explanation: Sibb sīe mid ēow is a wish of peace. **Ondrædað ēow** is a negative plural command with reflexive dative, no expressed feared object. The two descriptions "your God" and "your father's God" refer here to one deity, hence singular **sealde**. **Ēowres** agrees with genitive fæder; the following **ēow** is dative recipient of the treasure. The money is located **on ēowrum saccum**, dative plural. Making two gods or changing the possessive's case changes the supplied interpretation.

Cook 46.2

And hīe ðwōgon hiera fēt, and hē sealde hiera assum fōdor.
Cook's prompt: And they washed (101) their feet, and he gave their asses provender [fodder].
Target and explanation: Ðwōgon is the contracted verb's third-plural preterite: the brothers washed their accusative plural **fēt**. The subject then changes to singular **hē**, the steward, who **sealde** fodder to **hiera assum**, dative plural. **Hiera** is a possessor in both phrases; its unchanged spelling does not give the feet and asses the same grammatical role.

Cook 46.3

Hīe lęgdon hiera lāc forð, ongēan ðætte Iosep inēode.
Cook's prompt: They set (lęcgean) forth their presents, against that (ongēan ðætte) Joseph (om. should) enter.
Target and explanation: Lęgdon is third-plural preterite of lęcgean, with accusative plural **lāc** and forð "forth." The supplied **ongēan ðætte** clause means in readiness for Joseph's entering. **Inēode** is past subjunctive third singular in that prospective frame; its identical indicative spelling elsewhere does not settle its mood here. A mere assertion that he had already entered would lose the preparation relation.

Cook 46.4

Đā oncnēow Iosep hīe, and āscode hīe hwæðer hiera fæder hāl wære, oððe hwæðer hē lifde.
Cook's prompt: Then Joseph recognized them, and asked them whether their father was hale, or whether he was living [lived].
Target and explanation: Joseph is the singular recognizer and questioner; both accusative **hīe** forms refer to the brothers. **Oncnēow** is the preterite of recognition. In the indirect questions the subject is their father, with third-singular past subjunctives **wære** and **lifde**. The question asks whether he was well or alive; it does not assert that he was dead or make the brothers the subject of lifde.

Cook 46.5

Đā cwædon hīe: Đīn ðēow, ūre fæder, is gesund; hē leofað gīet.
Cook's prompt: Then said they, Thy servant (ðēow) our father is well (gesund); he is yet alive [liveth yet].
Target and explanation: "Thy servant, our father" names one person, the singular subject of **is** and **leofað**. **Gesund** means well or healthy; **gīet** preserves "yet." **Đēow** is the selected strong servant noun, not the weak noun ðēowa or an adjective silently substituted for it. A present assertion of life is needed; past lifde would answer a different temporal question.

Cook 46.6

Đā Iosep geseah his brōðor Beniamin, ðā cwæð hē: Is ðis se cnapa ðe gē mē foresægdon? And hē cwæð: God gemiltsie ðē, mīn sunu.
Cook's prompt: When Joseph saw his brother Benjamin, then said he, Is this (neut.) the lad, (om. of) whom (87. d) ye told me before (foresęcgean)? And he said, God have compassion on thee, my son.
Target and explanation: Joseph first speaks of Benjamin in the identification question, then addresses him directly. Retain the requested neuter **ðis** in **is ðis se cnapa**. The relative **ðe** represents the boy mentioned earlier; **mē** is dative hearer after **foresægdon**, and no "of" is inserted. **Gemiltsie** is a third-singular subjunctive wish with dative **ðē**, "may God have compassion on you." **Mīn sunu** is address, not the subject of that wish.

Cook 46.7

Đā bēad Iosep his gerēfan, and cwæð: Gefyl hiera saccas mid hwǣte, and sęte ælces hiera feoh on his āgenne sacc.

Cook's prompt: Then Joseph commanded (bēodan, 164) his steward, and said, Fill their sacks with wheat, and put the money of each of them into (on, 172) his own sack.

Target and explanation: Commanding **bēad** takes dative **his gerēfan**. Singular **gefyl** and **sęte** address that steward. **Mid hwǣte** supplies the sacks' contents, while **ælces hiera feoh** means each one's money: the money belongs to each brother. **On his āgenne sacc** is the accusative destination, each owner's own sack. Making all the money belong to the steward or using a static dative for the placement changes the instructions.

Supplied construction: The visible frame **Gefyl hiera saccas mid hwǣte** supplies the material construction: **saccas** is accusative plural and **hwǣte** dative singular after **mid**. Do not grade recall of this previously untaught lexical frame.

Cook 46.8

And nim mīnne seolfrenne læfel, and ðæs hwǣtes weorð ðe hē ðē sealde, and dō on ðæs gingstan sacc; and hē dyde swā.

Cook's prompt: And take my silver cup (læfel, 43), and the price (weorð, 47) of the wheat, which he gave thee, and put into the sack of the youngest; and he did so.

Target and explanation: The two things to take and put are the silver cup and the wheat-price. Supplied **seolfrenne** agrees with masculine accusative singular **læfel**. **Ðæs hwǣtes** specifies the price, and the relative says that he gave it **ðē**, to thee: preserve the source's singular addressee. The second imperative **dō** shares the coordinated objects without an inserted singular "it." **Ðæs gingstan** is the substantival weak genitive, the youngest person as possessor of the sack.

Cook 46.9

On morgen, ðā hīe fōron, and hīe būtan byrig wǽron, and fōron sumne dǽl ðæs weges, ðā cwæð Iosep tō his gerēfan: Ārīs, and gā æfter ðissum mannum; and ðonne ðū hīe fō, ðonne āsca hīe hwȳ hīe wolden gōd mid yfele forgieldan.

Cook's prompt: In (om. the) morning, as (ðā) they journeyed, and they were without (om. the) city, and had gone (faran) some part of the way, then said Joseph to (tō) his steward, Arise and go after these men, and when you have (196. b) overtaken [caught] them, then ask them why they would (willan) requite good with (mid) evil.

Target and explanation: Retain all three circumstances: they travelled, were outside the city, and had gone part of the way. **Būtan byrig** is the supplied spatial outside phrase; **sumne dǽl ðæs weges** expresses distance travelled, and the simple preterite fōron can convey "had gone." **Ārīs, gā, āsca** address one steward. Future temporal **ðonne ðū hīe fō** has second-singular present subjunctive, "when you have caught them." In the indirect why-question, **wolden** is plural past subjunctive and **gōd mid yfele forgieldan** means repay good with evil. The evil is what is given in return.

Supplied construction: The fixed phrase **On morgen** is supplied with accusative singular **morgen**. Its temporal case is part of the visible help, not an inference from the earlier numbered-day construction.

Cook 47

Cook 47.1

Se læfel ðe gē forstǣlon wæs mīnum hlāforde swīðe dēorwierðe.
Cook's prompt: The cup, which ye stole (forstelan, 105), was very precious to my lord (hlāford).
Target and explanation: The cup is the singular subject of **wæs**. Relative **ðe** represents it as object of **forstǣlon**, past indicative second plural addressed to the brothers. **Mīnum hlāforde** is dative, the person to whom it was precious. The past plural's **æ** differs from singular forstæl in 47.8. The small isolated mark in the print does not supply an additional word or grammatical instruction.

Cook 47.2

Hē dyde swā him boden wæs, and ðā hīe fangen wǣron, ðā cwǣdon hīe: Ðæt feoh ðe wē on ūrum saccum fundon, wē brōhton ðē of ūrum lande; wēnst ðū ðæt wē ðīnes hlāfordes gold oððe his seolfor stǣlen?
Cook's prompt: He did as was commanded him, and when they were overtaken [caught], they said, The money that we found in our sacks we brought to thee from our country; thinkest (wēnan) thou that we (om. have) stolen (stelan) thy lord's gold or his silver?
Target and explanation: The steward did what was commanded him, using the same impersonal frame as 45.5. **Fangen wǣron** is passive with the brothers as plural subject. Their following claim preserves the money, its discovery in the sacks, the return to the steward and the origin in their country. **Wēnst ðū ðæt ... stǣlen** asks whether he thinks they stole the gold or silver. **Stǣlen** is first-plural past subjunctive; it supplies the questioned earlier theft without adding the omitted have. It is not an admission that they stole anything.

Cook 47.3

Sēc hit; and sīe hē ofslægen mid ðǣm ðe ðū hit finde.
Cook's prompt: Look for [seek out] it; and let him be slain (ofslēan) with whom thou findest (195) it.
Target and explanation: Sēc is a singular command. **Sīe hē ofslægen** is a third-singular wish, "let him be slain"; it is not an instruction that the addressee kill himself. In **mid ðǣm ðe ðū hit finde**, mid governs the dative associate and invariant ðe resumes that person. **Finde** is second-singular present subjunctive in the optative/hypothetical relative under Cook 195. **Hit** is neuter accusative singular here, resuming the alleged stolen gold or silver in 47.2 (both neuter). A version directly resuming masculine **læfel** instead uses **hine**; preserve its reference consistently.

Cook 47.4

Ðā cwæð hē: Mid swā hwǣm swā ic hit finde, sīe hē mīn ðēow, and sīen ðā ōðre clǣne.
Cook's prompt: Then said he, With whomsoever I find it, let him be my servant, and let the others be blameless (clǣne).
Target and explanation: The free-choice phrase **mid swā hwǣm swā** identifies whichever person has the alleged stolen property; neuter **hit** continues 47.2's gold/silver reference, while direct reference to **læfel** would use **hine**. **Hē** resumes that person as subject of singular **sīe**. The remaining brothers are plural **ðā ōðre** with **sīen**, and **clǣne** means clear of blame here. "Whoever I find it with" is an equivalent English rendering; making all the brothers guilty or making the indefinite person plural reverses the contrast.

Cook 47.5

And hē sōhte fram ðǣm ieldestan oð ðone gingstan; and hē funde ðone læfel on Beniamines sacce; and hīe ęft gewęndon tō ðære byrig.
Cook's prompt: And he sought from (fram) the eldest unto [until] the youngest; and he found the cup in Benjamin's sack; and they turned back to the city.
Target and explanation: The search proceeds **fram ðǣm ieldestan oð ðone gingstan**: dative after fram, accusative after oð. **Funde** is the already taught and source-attested third-singular form of findan; it is not an error or necessarily second singular. **Fand** is also attested, but funde is the selected model. The cup is found in supplied **Beniamines sacce**, static dative; plural **gewęndon** then returns the brothers to the city. Do not make the steward the plural returning subject.

Cook 47.6

And Iudas inēode fyrmest mid his brōðrum tō Iosepe, and hīe ealle ætgædere beforan Iosepe fēollon.
Cook's prompt: And Judah went in first (fyrmest) with his brethren to Joseph, and they fell all together before Joseph.
Target and explanation: Iudas inēode fyrmest says that Judah entered first, with his brothers. **Mid his brōðrum** describes his companions, not a plural subject of inēode. The next clause expressly has **hīe ealle** and plural **fēollon**: all fell together before Joseph. Both the leading entry and the collective prostration must be retained.

Cook 47.7

And hē cwæð tō him: Hwȳ gē swā dōn woldon?
Cook's prompt: And he said to (tō) them, Why would ye do so (verb last)?
Target and explanation: The direct question keeps **gē** as the plural addressees and **woldon** as the final finite verb, governing plain **dōn**. **Swā** means "so/in that manner," referring to the alleged conduct. A grammatical question with a different order can miss the explicit verb-last control; a singular modal would change the audience.

Cook 47.8

Sīe hē mīn ðēow ðe ðone læfel forstæl, and gāð gē frige tō ēowrum fæder.
Cook's prompt: Let him be my servant who stole the cup, and go ye free to your father.
Target and explanation: The singular wish **sīe hē mīn ðēow** is restricted by the relative to the one who stole the cup. **Forstæl** is past indicative third singular, unlike plural forstǣlon in 47.1. The rest receive plural command **gāð**, with supplied **frige**, free. Do not change the selected source spelling by silently adding vowel length, and do not extend the servitude to those being released.

Cook 47.9

Ðā cwæð Iudas: Ðū āscodest ūs ær hwæðer wē fæder oððe brōðor hæfden.
Cook's prompt: Then said Judah, Thou askedst us before whether we had father or brother.
Target and explanation: Judah addresses Joseph with singular **ðū āscodest**. **Ūs** is the plural people questioned; **hwæðer wē … hæfden** is the embedded question about their family, with first-plural past subjunctive. ***Ær*** retains the earlier time. Converting the embedded question into a present assertion, or making Jacob the person who asked, changes the report.

Cook 47.10

And wē cwǣdon: Wē habbað ealdne fæder, and hē hæfð mid him ūrne gingstan brōðor; and hē lufað hine ænne ofer ūs ealle.
Cook's prompt: And we said, We have (om. an) old father, and he hath with him our youngest brother, and he loveth him alone (ænne) above (ofer) us all.
Target and explanation: The brothers are the subject of **habbað**, with accusative **ealdne fæder** and no indefinite article. The father then becomes singular subject of **hæfð** and **lufað**. ***Ænne***, as supplied, agrees with accusative hine in the sense "him alone"; it is not the article omitted before father. **Ofer ūs ealle** preserves the comparison "above all of us." Do not replace the singular youngest brother with several brothers.

Cook 47.11

And ðū bīetst ūs ðæt wē hine ðē bringen, ðæt ðū hine gesēo, and wite be ðǣm ðæt wē ne wǣren scēaweras.
Cook's prompt: And thou commandest us that we (om. should) bring him to thee, that thou (om. mightest) see him, and know by (be) that that we were not spies (scēawere, 44).
Target and explanation: Keep the actual present **bīetst**, "thou commandest." **Bringen** is first-plural present subjunctive in the commanded action; **gesēo** and **wite** are coordinated second-singular present subjunctives expressing its purpose. **Be ðǣm** means by that evidence, followed by the content **ðæt wē ne wǣren scēaweras**, with past subjunctive preserving "were." The same-looking bīetst of bēatan is not meant. A silent backshift of commandest, or dropping the knowing clause, loses an explicit part of the prompt.

Cook 48

Cook 48.1

And ic swōr āðas mīnum fæder ðæt ic hine ęft hām tō him brōhte, and cwæð: Būtan ic hine ęft tō ðē bringe, sīe ic ā scyldig wið ðē.
Cook's prompt: And I swore oaths (om. to) my father that I (om. would) bring him home again to (tō) him, and said, Except I bring him again back to thee, let me be ever guilty (scyldig) toward (wið) thee.
Target and explanation: Judah swore accusative **āðas** to dative **mīnum fæder**, without tō before that recipient. **Brōhte** is first-singular past subjunctive in the promised action. In the subsequent direct quotation **bringe** is first-singular present subjunctive after conditional būtan; **sīe ic ā scyldig** is the enduring self-imprecation. The father referred to as him in the narrative becomes **ðē** in the speech addressed to him. The change of person must not create a new recipient.

Cook 48.2

Mīn hlāford, lǣt ðone cnapan mid his brōðrum hām gān, and sīe ic ðīn ðēow for hine.
Cook's prompt: My lord, let (lǣtan) the lad go home with his brethren, and (om. let) me be thy servant instead of (for, 172) him.
Target and explanation: Singular **lǣt** addresses Joseph. **Ðone cnapan** is accusative actor of plain infinitive **gān**: permit the boy to go home with his brothers. The second clause is an independent first-singular wish, **sīe ic ðīn ðēow**, with no repeated lexical "let." **For hine** is substitution with accusative, "in his place." Making Judah the person allowed to depart would reverse his offer.

Cook 48.3

Ic ne dearr hām gān būtan ðǣm cnapan, ðȳ-lǣs-ðe ic mīnes fæder sārnesse gesēo.
Cook's prompt: I dare not go home without the lad, lest I see my father's grief.
Target and explanation: Ne dearr … gān expresses the speaker's present refusal through lack of daring, with a plain infinitive. **Būtan ðǣm cnapan** means without the boy, a dative prepositional phrase; it is not the unless conjunction used elsewhere. Negative-purpose **ðȳ-lǣs-ðe … gesēo** means "lest I see," with first-singular present subjunctive. The father is genitive possessor of accusative grief. The feared sight is prospective, not an event that has already occurred.

Cook 48.4

Đā ne meahte Iosep hine lęng diernan, ac hē ādrāf ealle ðā ōðre ūt, ðæt nān ęlðēodig mann betweox him ne wære.
Cook's prompt: Then could (mugan) not Joseph conceal (diernan, 113) himself longer, but he drove all the others out, that no foreign man (om. should) be among them.
Target and explanation: Past **meahte** governs plain **diernan**; accusative **hine** refers reflexively to Joseph. **Lęng** modifies the duration of concealment. After **ādrāf … ūt**, the final clause gives the purpose that no foreign person be among them, with **wære** past subjunctive. **Nān … ne** is concordant negation. Losing either the expulsion or the purpose reduces the sentence to only part of the event.

Cook 48.5

And hē wēop and clēopode hlūdre stefne; and hē cwæð tō his brōðrum: Ic eom Iosep; leofað ūre fæder nū gīet?
Cook's prompt: And he wept and cried (clēopian) with a loud (hlūd) voice (160. 1); and he said to (tō) his brethren, I am Joseph; (om. doth) our father live yet (nū gīet)?
Target and explanation: Joseph both **wēop** and **clēopode**. The latter retains the long ē of Cook's exact clēopian hint; it does not rewrite the previously taught unmarked cleopian spelling. **Hlūdre stefne** is dative/instrumental manner, with a loud voice, without an extra preposition. The quoted **eom** identifies Joseph; **leofað … nū gīet?** asks whether the father still lives, without an English-style do auxiliary.

Cook 48.6

Ne ondrædað ēow nānes ðinges, ne ofðynce ēow ðæt gē mē on ðis rīce sealdon; sōðlice God sęnde mē for ēowerre ðearfe tō Egypta lande.
Cook's prompt: Fear ye (184) nothing, nor (om. let) it grieve (190) you that ye sold (sęllan) me into this kingdom; indeed (om. it was) for your benefit God sent me into the land of the Egyptians.
Target and explanation: Ondrædað ēow nānes ðinges combines reflexive dative ēow with genitive of the thing feared. **Ofðynce ēow** is third-singular impersonal subjunctive, "let it not grieve you"; the plural experiencers do not make its verb plural. **Sealdon** here means sold, not gave. **God sęnde** supplies the asserted agent without an added cleft "it was." The supplied benefit phrase **for ēowerre ðearfe** is dative feminine singular, including the possessive ending. Replacing it with accusative ēowre would miss that agreement.

Cook 48.7

Nū twā gēar hunger wæs ofer ealle eorðan, and gīet sculon fīf, on ðǣm mann nāhwæðer ne ęrian ne rīpan mæg.

Cook's prompt: Now two years has been [was] famine over (172) all (om. the) earth, and (om. there) yet shall (om. be) five, in which one can (mugan) neither (89. a) plow (ęrian, 116) nor reap (rīpan, 102).

Target and explanation: Use the complete supplied frame. **Twā gēar** gives duration, while singular **hunger** governs **wæs**; **ofer ealle eorðan** is accusative extent without an article. In **gīet sculon fīf**, fīf stands for five further years and the source explicitly omits "there" and "be." Do not invent an additional written copula. **On ðǣm** refers to those years; indefinite **mann** is singular subject of **mæg**. **Nāhwæðer ne ęrian ne rīpan** excludes both activities. "Neither … nor" must not become "either … or."

Cook 48.8

Gāð hrædlīce tō mīnum fæder and sęcgað him ðæt God mē tō hlāforde eallum Egyptum gesętte; bēodað him ðæt hē tō mē cume and on ðissum lande wunie.

Cook's prompt: Go quickly to my father and tell him that God has set me as a (tō) lord (om. to) all (om. the) Egyptians; bid (bēodan) him (164) that he come to me and dwell in this land.

Target and explanation: Plural **gāð, sęcgað, bēodað** address the brothers. In the supplied appointment clause, **mē** is the person appointed, **tō hlāforde** the role, and **eallum Egyptum** the people governed; the last phrase has neither an added article nor tō. The father is dative **him** after bēodað, then singular subject of subjunctives **cume** and **wunie**. The different addressees and actors must not be merged into a single plural command to dwell.

Cook 48.9

Dōð swā, ðæt gē ne forweorðen.

Cook's prompt: Do thus, that ye perish not.

Target and explanation: Dōð swā is a plural command, "do thus." The following **ðæt gē ne forweorðen** gives its negative purpose, so that they may not perish, with second-plural present subjunctive. The target is an adverb of manner: **swā** or **ðus**, not the object pronoun **ðis** "this." An indicative statement that they are already perishing reverses the purpose.

Cook 48.10

Nū gē gesēoð hū hit mid mē is, and gē hīerað hwæt ic tō ēow sprece.
Cook's prompt: Now ye see how it is with me, and ye hear what I say (sprecan) to (tō) you.
Target and explanation: Both main verbs have plural **gē**: you see the stated circumstances and hear the speech. **Hū hit mid mē is** is the supplied state-of-affairs expression "how it is with me," not mere physical accompaniment. **Hwæt ic tō ēow sprece** is what Joseph says to them: first-singular speaker, plural addressees. Equivalent English wording such as "how matters stand with me" is acceptable; replacing either embedded clause by a new direct question loses the sentence's structure.

R. The princess's gifts and the banquet's end

The assigned reading is Cook 175.18–177.2, ending with **geręstan** before *Apollonius as Teacher*. The divisions below cover every clause. Page and line references retain the edition's pages and the stated physical-line convention. Use the source notes and complete local help throughout.

R01

Task: Translate the complete assigned passage in the following three consecutive divisions. All local help and original notes remain available.

Translate 175.18–176.2, through goldhorde.

Indeed, when the king's daughter saw that Apollonius was so well trained in all good accomplishments, her heart fell in love with him. Then, after the end of the banquet, the maiden said to the king: 'Dear father, a little while ago you allowed me to give Apollonius whatever I wished from your treasure.'

Target and explanation: The daughter is the perceiver and the person who falls in love; Apollonius is the person admired. "Accomplishments," "skills" and "arts" can render the supplied cræft sense here. The permission belongs to an earlier occasion, recalled with "a little while ago"; it does not command a gift at that earlier moment. The free choice and royal treasure remain part of what she recalls.

Translate 176.3–176.13, through gesāwon.

King Arcestrates said to her: 'Give him whatever you wish.'

She then went out very gladly and said: 'Master Apollonius, with my father's permission I give you two hundred pounds of gold, and four hundred pounds by weight of silver, and the greatest portion of precious clothing, and

twenty male slaves.' And she then spoke thus to the slaves: 'Carry these things with you, which I promised Apollonius my teacher, and put them in the chamber in front of my friends.'

This was then done in this way, according to the princess's command; and all the men who saw them praised her gifts.

Target and explanation: Retain the two separate amounts and their materials: two hundred pounds of gold, four hundred pounds by weight of silver. **Đone mǽstan dǽl** is a superlative: "the greatest part/portion" or "most of the precious clothing," not merely "a large amount." The twenty male slaves are also a gift, then become the addressees of the carrying and placing commands. "Teacher" or "master" can render Lārēow; chamber is supplied with the original dining-room note. The princess's commands are then reported as carried out. The final relative means that the men saw the gifts; original note 13 expressly supplies męnn as its antecedent.

Translate from Đā sōðlice geęndode in 176.13 through 177.2 geręstan.

Then the banquet ended, and all the men rose and took leave of the king and the princess, wished them well, and went home. Apollonius likewise said: 'You good king and one who has mercy on the poor, and you princess, lover of learning, may you be well.'

He also looked toward the slaves whom the maiden had given him, and said to them: 'Take with you these things which the princess gave me, and let us go and seek our lodging, so that we may rest.'

Target and explanation: The guests' rising, leave-taking and going home are narrated as completed. "Bade them farewell" can render the wish that they be well; grētton is appropriate to taking leave here. Apollonius first addresses the king and princess, then turns to the slaves given him. His last words are commands and a proposal, followed by the purpose of rest. They do not narrate arrival or sleep. "Inn," "guesthouse" and "lodging" can render giesthūs in this context. The printed cwēn is the princess, the established king's daughter, rather than a newly introduced queen.

R02

Task: For each cited form, name the referent and explain its grammatical role. Keep the whole passage available.

Explain hiere and his in 175.20.

Hiere is genitive feminine singular, the daughter as possessor of **mōd**. **His** is genitive masculine singular referring to Apollonius; in the supplied love expression the affection is directed toward him. Thus "her heart fell in love with him," or idiomatically "she fell in love with him." It does not say that he fell in love with her.

Identify the speaker and addressee of ic and ðē in 176.5.

The princess is **ic**, the nominative giver and speaker of this new quotation. Apollonius is **ðē**, dative recipient of **giefe**, "I give you." The preceding king's speech has ended; keeping him as speaker would assign the gifts to the wrong person.

Distinguish him in 176.19 from him in 176.20.

In **ðe ðæt mæden him forgiefen hæfde**, him is dative singular Apollonius, recipient of the slaves. In **and him cwæð tō**, him is dative plural, the slaves whom he now addresses; tō is postposed. The identical spellings have different numbers and referents, established by their clauses and the following plural commands.

R03

Task: Parse the following selected source expressions and explain their functions. Supplied lexical and quantity explanations remain visible.

Compare the grammatical subjects of geseah 175.18 and gefēoll 175.20.

The subject of **geseah** is **ðæs cyninges dohtor**, the king's daughter. The grammatical subject of **gefēoll** is singular **hiere mōd**, her heart or mind; hiere alone is a genitive possessor. Idiomatic English may say "she fell in love," but that does not change the Old English subject's structure.

Explain the relationships expressed by punda and goldes in 176.6.

Punda is genitive plural of the counted weight-unit after **twā hund**. **Goldes** is genitive singular identifying the material measured. The supplied whole phrase means "two hundred pounds of gold." Calling both simply "possessors" obscures the different dependencies; this task applies the visible quantity analysis rather than testing an unassigned numeral system.

Use original note 13 to explain ðe hīe gesāwon in 176.13 and the role of giefa.

Original note 13 expressly identifies **męnn** as the antecedent of **ðe**. The relative represents those men as the subject of **gesāwon**; **hīe** is accusative plural, the gifts they saw. **Giefa** is accusative plural object of **hęredon**, with genitive hiere naming the princess as their giver/possessor. Thus "all the men who saw them praised her gifts." The intervening words do not make gifts the relative subject.

Compare the case, number and agreement of gesunde in 176.16 and 176.18.

In **bædon hīe gesunde bēon** (176.16), **gesunde** is accusative plural, agreeing with accusative **hīe**, the king and princess as subject of infinitive bēon. In **bēon gē gesunde** (176.18), it is nominative plural, agreeing with **gē** in a direct second-plural subjunctive wish. Both formulas mean "be well" or "farewell." The adjective is not an adverb merely because English says "well"; the two bēon forms also have different grammatical functions.

R04

Task: Describe the clause relations in the following spans using the complete source and its local support.

Analyse the opening sentence 175.18–20: identify the temporal frame, the seeing-content clause and the main event.

Mid-ðȳ-ðe introduces the temporal frame, "when the king's daughter saw …." Within it, **ðæt Apollonius … wæs getogen** is the content seen: his education and accomplishments. **Đā gefēoll hiere mōd …** gives the ensuing main event. Geseah and wæs are indicative in this asserted circumstance. These are nested temporal and content relations followed by a main clause, not three interchangeable relative clauses.

Compare ðæt ic mōste 176.1 with swā-hwæt-swā 176.2 and 176.3–4.

Đæt ic mōste giefan … is the supplied permission-content construction: "you allowed me to give …," as original note 2 directs. Mōste expresses permission here, not obligation. **Swā-hwæt-swā** means "whatever," the freely selected thing given: the daughter recalls what she **wolde**, and the king now says she may give what she **wille**. These are free-choice relatives, not direct questions. The earlier wolde is first-singular past subjunctive; wille is second-singular present subjunctive addressed to her.

Analyse the final ðæt clause 177.2 and explain how it relates to gān wē sēcean.

Gān wē is a first-plural present-subjunctive exhortation, "let us go." Plain infinitive **sēcean** gives the action sought by going, finding their lodging. **Ðæt wē mægen ūs geręstan** gives its purpose, "so that we may rest": mægen is first-plural present subjunctive, geręstan an infinitive, and **ūs** the accusative reflexive directed by original note 177.2 (§184b). Neither the exhortation nor the purpose narrates an arrival or completed rest.

R05

Task: Explain the passage's sequence from the actual statements, distinguishing completed actions from proposals.

What authority does the princess give for her gifts, and who selects them?

She invokes her father's earlier permission, then announces the gifts **be mīnes fæder lēafe**, with his permission. He confirms that she may give whatever she wishes. The daughter selects and enumerates the gifts; the king does not individually prescribe the stated amounts, clothing and slaves.

What does the final speech establish about Apollonius's next action, and what remains unnarrated at this boundary?

He orders the slaves to take the gifts with them and proposes that they go to seek their lodging so that they can rest. The earlier guests have already gone home, but this last speech does not narrate Apollonius's arrival, sleep or completed rest. "He plans/proposes to go and rest" is accurate; "he went to sleep" imports an event beyond the selected boundary.

Cook's original reading notes

These twenty-two notes retain Cook's wording and all twenty-nine anchor relationships. Their section numbers refer to his grammar; the visible modern help supplies the interpretations used above. His etymological questions and the Beowulf comparison are retained apparatus, not additional exercises or a poetry assignment.

175, note 10 (175.19 getogen,). See getēon. What relation has getogen to Mod. Eng. wanton?

175, note 11 (175.21 "Lēofa). See 55.

176, note 1 (176.01 lȳtle; 176.01 ǣr,). Lat. paulo ante. See 178.

176, note 2 (176.01 ðæt; 176.01 ic; 176.01 mōste). Translate by the infinitive sign, to. The OE. follows the Latin.

176, note 3 (176.04 wille.). See 197.

176, note 4 (176.04 ūtēode,). Not in Latin.

176, note 5 (176.05 “Lārēow). Lat. magister.

176, note 6 (176.06 punda; 176.06 punda). See 154. c.

176, note 7 (176.06 goldes,; 176.07 seolfres,). See 153. f.

176, note 8 (176.07 gewihte). See 174.

176, note 9 (176.07 dēorwurðes). MS. deorwurðan.

176, note 10 (176.08 ðēowa; 176.08 manna.). Lat. servos.

176, note 13 (176.13 ðe). Refers to męnn.

176, note 14 (176.14 ārison,). So in Beowulf (653–655): “Werod eall ārās; grētte ðā . . . guma ōðerne, . . . and him hǣl ābēad.”

176, note 15 (176.16 bēon,). Lat. vale dicentes.

176, note 16 (176.17 earmra; 176.18 lāre). See 153. d.

176, note 17 (176.18 gesunde.). Lat. valete.

176, note 18 (176.20 hæfde,). See 188.

177, note 1 (177.01 gān). See 193. a.

177, note 2 (177.02 ūs). See 184. b.

[1]: Cook, *Exercises in Old English* (1895), pp. 29–33, joint XII, XIII, Exercises 44–48; *A First Book in Old English*, second edition (1895), pp. 175–177 and the cited grammatical sections. The command-passive reference in 45.5 uses 177.10 as a grammatical parallel without assigning the following episode. Additional checked lexical evidence is Bosworth–Toller, main volume pp. 95 and 1056 and Supplement pp. 81, 240 and 646; proper-name and supplied nominal evidence is documented in the unit’s source apparatus. The earlier findan form funde is explicitly allowed by Cook’s strong-verb discussion; no correction to its earlier teaching is required.
